In the New Testament we find the same hope expressed in Romans 8:28; 2 Cor. 4:17; the whole of the 12th chapter of Hebrews; 1 Peter 1:6-7; 2 Peter 2:9 and in many other places, and in 1 Cor. 10:13 we have the promise: "There hath no temptation taken you but such as is common to man; but God is faithful, who will not suffer you to be tempted above that ye are able, but will, with the temptation also make a way of escape that ye may be able to bear it."

THE FRIENDS OF JESUS.

How comforting to us as Christians that we have a Friend above all other friends to whom we can tell all our cares and sorrows, all our trials and temptations, knowing that he will hear and comfort us.

We may have a great many friends; but if we have not Jesus for our best Friend, we can not be truly happy in this life, and have no promise of eternal life.

He says, "Ye are my friends if ye do whatsoever I command you." If we obey all his commandments, we are his friends. But we of ourselves can not obey his will; we need the Holy Spirit to guide and direct us, or we would soon become disobedient. If we have friends we truly love, it is not hard for us to please them. So if we love God we will also try to please him. But can we ever repay him for all he has done for us? Never, no never! But we can serve him and show our love to him by keeping his commandments and by doing all we can to his glory.

Obedying him and doing good should not be a task, but a pleasure. There are many ways of doing good. How often a few kind and encouraging words are the means of cheering a heavy-laden soul. Those only who have experienced the help they have received know the worth of sympathy and encouragement. Let

us not neglect to see the goodness which God daily bestows upon us.

Our bodies may be burdened with pain and suffering, trials and afflictions may be our lot. But through his grace we can keep praising and trusting him. May he give us grace to be faithful to the end, that we may receive a crown of life. "Blessed are they that do his commandments, that they may have a right to the tree of life, and may enter in through the gates into the city." (Rev. 22: 14.)—Gospel Herald.

WHY CHRIST'S YOKE IS LIGHT.

MARK GUY PEARSE gives an incident occurring in connection with a sermon of his on Christ's invitation to the weary and heavy-laden. I had finished my sermon when a good man came to me and said: "I wish I had known what you were going to preach about. I could have told you something." "Well, my friend," I said, "may I have it still?" "Do you know why his yoke is light, sir?" "Well, because the good Lord helps us to carry it, I suppose." "No, sir," said he, shaking his head. "I think I know better than that. You see, when I was a boy at home, I used to drive the oxen, and the yoke was never made to balance as you said. Father's yokes were always made heavier on one side than the other. Then, you see, we would put a weak bullock in alongside of a strong bullock; the light end would come on the weak ox, the heavier end on the stronger one. That's why the yoke is easy and the burden is light, because the Lord's yoke is made after the same pattern, and the heavy end is upon his shoulder."—*The S. S. Times*.

THE SHEPHERD'S PSALM.

"The Lord is my shepherd; I shall not want."

I shall not want rest. "He maketh me to lie down in green pastures."

I shall not want drink. "He leadeth me beside the still waters."

I shall not want forgiveness. "He restoreth my soul."

I shall not want guidance. "He leadeth me in the paths of righteousness for his name's sake."

I shall not want companionship. "Yea, though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me."

I shall not want comfort. "Thy rod and thy staff they comfort me."

I shall not want food. "Thou preparest a table before me in the presence of mine enemies."

I shall not want joy. "Thou anointest my head with oil."

I shall not want anything. "My cup runneth over."

I shall not want anything in this life. "Surely

goodness and mercy shall follow me all the days of my life."

I shall not want anything in eternity. "And I will dwell in the house of the Lord forever."—*Selected*.

LUKEWARMNESS AND INDIFFERENCE.

It is coming to be seen with sorrow, by more and more intelligent and consecrated Christians, that we have generally throughout Christendom a lukewarm church and an indifferent world. Some people believe that the prophetic apostasy of the last days is coming in, and that the coming of the Lord is very nigh. Sad and startling reports come from both city and country, and many good pastors are discouraged.

This apostasy is clearly prophetic, yet the prophecy does not cause it. I pass over the causes, and will speak of the cure, so far as it possibly can be applied.

The remedy must begin at the head, in the leadership, where the defection began. Ministers must wake up and sober up to awaken the churches. They must abandon their destructive criticism, believe and preach the Word as they have vowed to do, turn away from the bargain counter, study to save rather than to please, and be willing to be heirs of the cross as well as of the crown.

They must ring out in the power of the Holy Ghost, ruin, redemption, regeneration, the Lord's coming, heaven and hell. They must appeal to both hope and fear, or none will be converted. They may preach love alone until sensible people are love-sick, but God says, in Ezekiel, that unless sinners are solemnly warned, they will perish, and he will send the unfaithful watchman to hell with them. They must not cry "Peace, peace," when there is no peace.

In order to wake up the church they must preach in trumpet tones the sinfulness of sin and its awful doom, to impress both saints and sinners as the old prophets and the former evangelists did. Then, when the preachers are waked up, they will wake up the world.

The church must pray for power from on high, and go forward in faith and faithfulness to fulfill the Great Commission. She must come out from the world, and show a contrast instead of conformity, break up her worldly clubs and trumpery societies, and move forward in a consolidated body as a specialistic society under a special commission.—*E. P. Marvin in Living Water*.

THE small college furnishes education at a lower cost than the larger institution, it keeps the boy nearer home, thus enabling him to visit home and his parents to visit him; it brings the teacher and student closer together and gives the student the benefit of the teacher's ideals. The small college, if under Christian influences, also gives more attention to ethical culture.—*Commoner*.

ECHOES FROM EVERYWHERE

A phenomenal rain of meteors filling the skies over Honolulu, Sept. 26, caused much excitement and alarm among the people. The fall began at 10:55. Although most of the heavenly visitors fell into the ocean, it is believed some of them struck on the island and an investigation will be made. Observers counted over 40 meteors which fell into the sea.

Standpat Republicans are incensed over the personnel of the new tariff board, and at the next session of Congress will attempt to have it wiped out or at least to prevent any appropriation being made for its maintenance. It is claimed President Taft, who favors a downward revision of the tariff, has placed men on the board who are not in favor of high protection.

The highest telephone line in the world, running to the Queen Marguerita observatory on Monte Rosa, Italy, more than 15,000 feet high, was recently placed in operation. The observatory and the telephone line which has been constructed at the expense of the Queen took six years to complete. The new line will be of great help to Alpinists in distress on Monte Rosa.

Reports from as many districts as can be reached show that the crop damage throughout the South caused by the recent storm is probably the greatest in the history of the country. The total damage from the storm, according to present estimates, will be more than \$10,000,000.

The electric power station of the government buildings at Washington is nearing completion. It is located in Garfield Park, near the Capitol, and connected with the legislative buildings by 7,000 feet of tunnels through which cables and steam pipes run. The tunnels are large enough for a man to walk through comfortably, so that breaks and other troubles can be quickly located and repaired.

Peace for at least three years was assured in the street car situation in Chicago by the signing by union officials, representing the employes of the Chicago Railways Company, which operates the North and West Side lines, of the wage scale offered by the street car officials. The scale is practically the same as that accepted a few days ago by employes of the South Side lines. Material concessions are granted the men.

Sequestered in the private office of the Secretary of the Treasury the new tariff board conferred over its plans at a first meeting Sept. 24. Professor Henry C. Emery, chairman, Acting Secretary of the Treasury Reynolds, and Alvin Sanders of Chicago were present. The board will assist the President in the administration of the law with a view to making what President Taft calls "a glossary or a small encyclopedia of the tariff."

An advance of from 5 to 10 per cent in the prices of watches to jobbers has been made by the Elgin and Waltham watch companies, according to announcement. It is stated that the advance is based purely on the new tariff bill, though both companies deny this. The advance in Elgin watches took place September 15, while the Waltham advance took effect September 20. Other watch manufacturers in this part of the country have either announced no advance or say definitely that there will be no advance in prices.

Both the Danish Houses of Parliament have adopted national defense bills which provide for the erection of forts north and south of Copenhagen and also at various points on the coast of Zeeland to prevent a possible landing and surprise by a hostile force. The existing land fortifications at Copenhagen will eventually be razed and the fleet will be further increased by the construction of torpedo boats and submarines. The garrisons of Zealand, Jutland and the island of Funen will also be strengthened. Now that the defense bills have been passed it is expected that J. C. Christensen, minister of war and marine, will yield to public sentiment and resign.

Between sixteen and eighteen hundred persons will be appointed as special agents of the census bureau about Jan. 1 next, and practical tests of the qualifications of applicants for such positions will be held on Nov. 3 next before the local board of civil service examiners in every State in the Union. The duties of such agents will be to collect statistics for the next census of manufactures, mines and quarries. As far as possible it is desired to obtain the services of persons who have taken college or university courses in statistics or economics, or persons who have had experience in the accounting departments of manufacturing or other business establishments. Applications will be accepted from women, but the opportunity for their appointment is slight. Chief special agents will receive \$4.50 to \$6 a day, while the assistants will receive from \$3 to \$4 a day. The chief special agents will be employed from six to fifteen months, and the assistants from three to six months. Following are the places in western States where tests may be taken by applicants for the positions:

- ILLINOIS—Cairo, Champaign, Chicago, East St. Louis, Freeport, Peoria, Quincy, Springfield.
- INDIANA—Bloomington, Evansville, Fort Wayne, Indianapolis, Lafayette, New Albany, Terre Haute, Valparaiso.
- IOWA—Ames, Burlington, Council Bluffs, Des Moines, Dubuque, Fort Dodge, Iowa City, Mason City, Sioux City.
- WISCONSIN—Appleton, Ashland, Chippewa Falls, La Crosse, Madison, Marinette, Milwaukee, Wausau.
- MICHIGAN—Ann Arbor, Detroit, Grand Rapids, Marquette, Saginaw, Sault Ste. Marie and Traverse City.

Judge Bullard, in convening a special grand jury at Collins, Miss., to investigate criminal cases, ruled from service several men said to be whisky drinkers. Under the Mississippi law men convicted of selling whisky in prohibition territory are ineligible for grand jury service. Judge Bullard held that the men who bought were equally improper jurors. The ruling is creating considerable comment. Many of the men not allowed to serve are prominent.

London has lately been enlightened through the "International Temperance Exhibit" displayed in Kensington Town Hall. Many political leaders and professors in scientific and medical schools were speakers and supporters. Germany showed 500 books in German upon the subject of alcohol and its effects. Russia exhibited diagrams picturing all phases of the subject. Austria, Sweden, Holland and even Argentina contributed notable displays, and altogether the exhibit marked a new departure in the progress of the reform.

At the Winnipeg meeting of the British Association for the Advancement of Science a model was exhibited by Mr. S. H. Schneider, which he claims will revolutionize the generation of electricity. It consists of a collapsible airtight box, which when closed sinks in water by its own weight. On reaching the bottom it is expanded by a magnet, when, being lighter than the water displaced, it rises to the surface, where it again folds up and sinks. The inventor states that a full-sized "generator," weighing 600,000 pounds and displacing 10,000 cubic feet, would generate 50,000 horsepower at practically no cost of operation.

Another evidence of the return of prosperity is given by the government returns showing the imports during the first seven months of the calendar year of material to be used by manufacturers. The statistics show that these imports increase in quantity from 25 to 150 per cent over the corresponding period of the previous year, while in value the increase was even greater. The value of crude materials for use in manufacturing imported in the seven months ending July, 1909, was \$294,500,000, against \$191,000,000 in the same months of last year, and that of manufactures for further use in manufacturing, \$139,000,000, against \$87,000,000 in the same months last year.

It is generally believed at Madrid that the complications which have arisen between Spain and Mulai Hafid, Sultan of Morocco, are likely to result in a Spanish-Moroccan war; that is, a war between Spain and the forces of the Sultan of Morocco in distinction to the fighting going on now, which is limited to the Moorish tribesmen inhabiting the Riff country. Spain has over 60,000 troops in northern Africa, with 11,000 more mobilizing for service there, and the government feels that only the brilliant completion of the work begun can defeat the plans of its political enemies at home. The situation at Barcelona is causing renewed anxiety. Bomb explosions on the streets are of almost daily occurrence, but newspapers that print even rumors of such occurrences are seized by the authorities. Mulai Hafid recently dispatched a note to the powers protesting against Spain's course in the Riff country, declaring it to be contrary to the terms of the Algeciras agreement, and asking for intervention by the powers. Spain has answered the note, but the contents of the reply are not known.

James B. Haggin, millionaire turfman, took issue with the Burley tobacco company and put in store his crop of between 300 and 400 acres of tobacco. It is the largest individual crop in the world. He refused to join last year because of night rider troubles. His action practically wins the fight for the tobacco society against the tobacco trust.

Sixty concerns in Cincinnati, St. Louis, San Francisco, New Orleans and other points recently had a hearing before the commissioner of internal revenue. These concerns manufacture raisin wine and claim they are not subject to government regulation; that no tax is collectable on such a product and that raisin wine is not a mash for distillation to which the internal revenue law applies. The existing law refers only to imitation wine and fortified sweet wine. The raisin wine fight dates back five years.

Representatives of hand-blown window glass works, involving plants to the amount of \$5,000,000, have effected a consolidation including 60 per cent of the total American production. The holding company will be known as the Imperial Glass Company and the formal capitalization is for \$250,000. The purpose of the combination is for an open fight against the American Window Glass Company's machine-made product and also to stop the price cutting war among hand-blown glass interests.

Washington is preparing to take the most important action looking to the security of the "open door" in China that has been called for since the Hay agreement ten years ago. If full information confirms reports recently received from Tokio and Peking the action will take the form of a protest, based on the Antung-Mukden Railroad controversy between Japan and China, which recently excited the diplomatic world. According to reports regarding the Japanese-Chinese agreement respecting the reconstruction of the Antung-Mukden Road, which have reached diplomatic circles here, Japan has obtained control of extensive mining concessions in South Manchuria—not for a limited but for an indeterminate period. This is to be regarded as a distinct menace to the open door, according to the exposition of that policy as given by the late Secretary Hay after the various powers with spheres of influence in China assented to the agreement embodied in the notes exchanged in 1899.

The dirigible army balloon *Republique* exploded near here while 500 feet in the air. Four aeronauts were killed and the balloon destroyed. The *Republique* had only recently been put in commission after an accident, in which it was blown from its moorings by a heavy wind and badly damaged. In the recent army maneuvers the *Republique* achieved distinction as a scout balloon. The aeronauts who lost their lives were Capt. Marchal and Lieuts. Chaure, Vincenot and Reux. The cause of the explosion has not been determined, as all the occupants were killed and the balloon badly smashed. The *Republique* is the second firstclass army dirigible that has been tested, the other being the *Patrie*, which broke away from 200 men who were trying to hold it during a storm and was carried to sea. The destruction of the *Republique* leaves the French army without a dirigible balloon worth the name, and places the country at a decided disadvantage with Germany in aeronautic experimentation, the latter country having the Zeppelin, Gros and Parseval types.

Among the Magazines

BREAD WITHOUT FLOUR.

Numerous ways of preparing the wheat grain for food without grinding it into flour are now in vogue, but the product is in all cases a so-called cereal of the "break-fast-food" variety, and does not take the place of bread. There are, however, little-used methods of preparing bread from the grain without previous grinding; and the improvements on those already introduced by two French inventors bid fair to make the resulting article of food familiar and popular. If this method becomes common, we shall hereafter, instead of buying flour, purchase wheat in the grain, soak it, and run it through a machine, from which it will issue as dough ready to be baked into bread. Whether the millers will approve of this flourless bread is another and a somewhat interesting question. Mr. Henri Blin, who describes this new process in *La Nature* (Paris, July 24), writes as follows:

"To transform, all at once, and without intermediary, the grains of wheat into a substantial and healthful bread would seem to be the ideal desideratum. But the practical solution of this interesting problem meets with serious mechanical difficulties, such as the complete trituration of the bran, the heating of the starch when treated in the dry state, and, above all, the routine and powerful interests of the flour trade."

A process intended to bring about the desired results, we are told, was devised some time ago by a Frenchman named Sézille, but it has not been successful in that his apparatus was not able to effect simultaneously the grinding of the wheat, the pulverization of the bran, and the kneading of the dough, with or without admixture of yeast and salt, with the water necessary to do this work in the closed space of one and the same machine. This very thing has now been accomplished by a process invented by Messrs. Desgoffe and Georges. Says the writer:

"These various functions, in spite of their lack of similarity, are practically united by the use of a special bread-maker called an 'antispire' whose use concentrates the work of the mill, of the bolter, and of kneading, in a light apparatus that may be operated by hand for small quantities of the product, or by any kind of motor with power proportionate to the desired output."

This machine, or "panificator," the writer goes on to say (we omit his detailed description), consists of a large screw turning loosely in a case on whose inner surface is also a screw thread running in the opposite direction. Between the main threads on the cylinder are smaller threads, and the depth of the groove between the main threads grows progressively smaller from one end to the other, so that it will hold the entire wheat grain, as it enters the machine, but at the exit will accommodate only the pulverized wheat. The grain is introduced through a funnel at one end of the machine, which may be mounted either horizontally or vertically. We read:

"To bring about direct panification on the Desgoffe-and-Georges process, the wheat must be previously pre-

pared; it is washed in much water to remove impurities, after which it is poured into another receptacle having twice the capacity necessary to hold it in its dry state. About a pint of water to a pound of wheat is added; with tepid water, six hours is sufficient to soak the grain so that it swells to double its volume. As soon as the grain has been soaked through it may be panified; it is then mixed with the necessary quantity of yeast and salt, or this mixture need not be made until the wheat has been passed through the machine.

"Thus prepared the wheat is poured into the funnel of the panificator, whence it penetrates automatically into the body of the machine, passing through a distributor whose output is regulated proportionally to the power available.

"From the distributor, the wheat falls between the threads of the moving screw and those of the fixed contrary screw, which crush simultaneously the envelope and the body of the grain, making of them a homogeneous mixture which, just before leaving the machine, already forms a smooth paste, but the work of kneading is terminated by the operation of a glider formed of two parallel surfaces whose distance apart is regulable. These surfaces are channeled in opposite directions; one is movable and is the extremity of the screw itself, while the other is fixed to the contrary screw and has a central hole through which the dough escapes in the form of a continuous roll. . . .

"To prevent all heating of the mass during the work, and to maintain the proper degree of moisture, a current of water is sent through the interior of the machine. . . .

"The dough, on issuing from the machine, is put into baskets, which are covered with woolen cloth and allowed to stand in a warm place. As soon as it begins to rise it is divided into long loaves and placed on wooden tables covered with warm cloth, until the moment when it is put into the oven. The latter, after the bread has been introduced, is sealed with clay.

"After baking 40 to 45 minutes, according to the degree of heat, the form of the loaves, and their size, they are removed and then a brush, slightly moistened, is passed over the smoking top of each loaf, to give to the crust an aspect more agreeable to the eye.

"Bread obtained by this process contains a succession of holes whose size increases as they approach the crust, which is very thin. The odor given off is very agreeable and much more pronounced than that of ordinary baker's bread.

"The Desgoffe-and-Georges process would appear to combine all the advantages of the direct panification of wheat—the amount of bread made from 100 pounds of ordinary wheat treated by this process is 150 pounds (180, in a state of dough). The inconvenience of bran in the dough is done away with by reducing the whole grain to a homogeneous mass. . . .

"This method enables us to obtain a dough containing

the wheat in its entirety, and consequently a so-called natural, total, or rational bread."—Translation made for *The Literary Digest*.

WAR AND THE GAME OF WAR.

There is a difference between the two. In real war the soldier is actually killed, or loses a leg or an arm; in the game of war, at the worst of it, he simply gets wet. At the end of the play he washes up, puts on clean and dry underclothes, and is an honest and useful and genuine citizen again. He has had his fun, such fun as it is, has given the generals and colonels of the regular army something to do for their money, and he may imagine that he has saved his country in some possible future invasion of Martians or other fabulous enemies.

Or very likely he carries home the pneumonia. In a real assault on Boston and a real defense, ten thousand soldiers would have been slain; in this mimic war only some hundreds are likely to die from the exposure to the inclement sky, while all endure minor suffering or incur serious sickness. Does it pay?

We see no proof of it. Of course, to those who are professional soldiers, it pays. It gives them experience in their hypothetical business, for it is their business to keep in patient, waiting preparation for what does not come off. They must magnify their profession. The war game makes their business popular and talked about. It fills columns of the newspapers. To them it is really something serious. It affects their business reputation. It pays.

But does it pay for the militiaman, who takes it out of his scant vacation, who gets no money or glory out of it, but to whom it is an expense and an exposure to storm and sickness and death? Perhaps it does. He thinks so or he would not do it. He takes it as a picnic and a lark, or, at best, as a service to the State whose regimental colors he follows.

And yet we imagine that the play-soldiers who, slept out in the rain and tramped through the mud about Assawompset Pond and the Bridgewater woods last week wished they were well out of it all. But they experienced none of the real hardships of war. What is a wet skin or what are blistered feet? There was no bloodshed; there were no ravaged homes, no widows and orphans, or are none yet. Their exposures to a summer rainstorm were nothing in comparison with the terrible scenes of a real battle, when leaden bullets and iron balls meet yielding flesh and crunching bones, nor even with the sufferings of a winter's campaign in genuine war.

Playing soldier is pleasant enough when one parades in line, under the cover of a spacious armory generously provided by the State. The regiment has the consciousness that it looks fine as it marches down Broadway in immaculate uniform, after a martial band, between lines of admiring spectators. It is a pretty play; a pretty play and nothing more. But the real soldiering—that is another thing. That is brutal; its business is killing. It is the lowest business one can get into, unless some extraordinary exigency should arise, such as can be and must be avoided by us for all future time. For that possible exigency we may still educate officers, we care not how many, if they will retire to civil life and do productive work until the exigency arises. If a war must come our people will meet it, and it will not take them much time to learn the new business. The blue militia did very well.

Such an experience as twenty thousand men have had in

a mimic attack on Boston may well teach them to love war less. They can get their amusement in better ways. They have learned a very little of the seriousness of war. They have found it is no fun. They started back to this city from Plymouth County wet, weary and hungry, if not sick of their experience, and with no great increment of glory. Some officers may have learned something in tactics, or as to the transport of commissary supplies, but the common soldier has learned absolutely nothing except how to obey and endure and suffer, all of which can be learned more profitably in other ways, for here there is no profit at all.

And yet we may suggest one possible lesson. Why not apply the rules of mimic war to real war? Let the armies meet. Let powder explode without shot. Let impartial judges after each engagement officially declare how many have been "killed" and "wounded," and send them home to their gainful vocations, without the bloodshed which in the past has been characteristic of war. War should be made a farce.—*The Independent*.

CASH VALUE OF A HUMAN BODY.

You have heard, perhaps, that human life is above valuation in mere money of the realm; that dollars and cents cannot recompense an injury to human existence. Sentimentally this is true, but practically it is largely untrue. A single human life, say the sentimentalists, is worth infinite millions of money; but human lives are being constantly sacrificed, often for the most commonplace ends. Think of the wars over small issues that have claimed their victims by the thousands. Think of the men that are working at dangerous trades, in which a percentage of lives must be sacrificed in order that business may go on. We know that a large number of railroad employees are killed every year that we may ride on the cars; a number of glassblowers ruin their lungs that we may have lamp-chimneys; men are being killed every day and lives taken by degrees that the world may eat and drink, wear clothes, and laugh. Who shall say, then, that human life has no money value?

In Japan a missionary hires a 'rickshaw man to pull him around in one of those quaint little gigs for six sen a day, or about \$12 a year in money. He runs with his passenger 40 miles a day if necessary. Five years of this cart-horse drudgery, according to best accounts, carries the poor fellow off with heart disease. He has sold his life for \$60; that is the estimate he himself puts on his existence.

Turning now to our more civilized land, we shall see that we rate our lives much higher. The life insurance companies value a man's life according to the premium he is willing to pay. Many rich men have earned \$50,000 for their families by dying. The Travelers' Insurance Company counts the loss of a man's leg at \$2,500; one eye, \$650; both eyes, both hands, or both feet, \$5,000. Death, in this policy, they reckon at \$5,000 also. Evidently they think a man may as well be dead as lose both eyes.

Uncle Sam gives a soldier who lost both eyes in the service of his country \$72 a month as long as he lives. For the loss of one eye the pensioner receives \$17, and for the loss of the sight of one eye \$12. Both hands the law recognizes as worth \$100 a month, the highest disability pension paid; both feet, \$72; an arm or a leg, \$45. But, of course, our government does not pretend to pay a veteran full recompense for his disabilities.

A man in New York last winter got a verdict of \$250 damages for the loss of half his whiskers which another man pulled out. Hence a nice full beard may be said to be worth \$500. This is the price set by a Minnesota man in a case for damages brought last week against an unskillful barber.

Arms and legs have been rated by juries all the way up to \$10,000. An Iowa man got a verdict of \$350 for an ear lost in a railroad accident. An English case gave the plaintiff \$500 for a broken nose, but an Ohio suitor received a consolation of only one cent damages for having his nose pulled and temporarily inflamed. The latter was a verdict for "nominal damages," as it is called. The legal right of the plaintiff was recognized, but the actual damages were too small for practical estimation.

A lady who had her false teeth stolen was only able to recover their market value, since they were decided to be merely personal property. Broken hearts are not quoted in the court records, nor are "lacerated feelings." Fair aspirants for matrimonial honors sometimes get damages for breach of promise of marriage, but such cases are no different from those arising out of broken business contracts.

Under an old common law of England if A ran over B's daughter or servant and killed her outright, B could not sue for damages. But if the daughter lingered for a time and then died B might put in a claim for the "lost services" of the victim and the jury might give him damages, which, however, were never adequate. With the introduction of railroads the injustice of this old common-law principle became so obvious that in 1846 Lord Campbell's act was passed, providing that where the death of one person is caused by the neglect or wrongful act of another the near relatives may sue and have adequate damages for the lost life. And this English law has been very generally followed in this country. Of course, the question of damages in these cases is entirely apart from that of criminal liability. The State prosecutes where a crime is charged, and the person directly injured may bring a private or civil suit for damages besides. Thus we see that, while the world has always hesitated to put a cash value on injuries to human life, it has been necessary for legislatures and courts to provide remedies for such injuries.—*The Pathfinder*.

Between Whiles

Johnny loved his papa, there was no doubt about that, and one morning, after he had listened to a long disquisition from the author of his being, addressed to his elders, on the general uselessness of the vermiform appendix, ending up with the broad statement that he hoped he'd see the day when every appendix in creation was cut out, the little boy resolved on an agreeable surprise for his daddy. He worked in secret for several days, and then sprang it.

"See what I have done for you, daddy!" he said, leading the wondering father into the library, and showing him a neat pile of many pages which he had accumulated. "I've cut the appendix out of every book in this library."

It was then that words failed, and Johnny's father's vocabulary made a general assignment for the benefit of its creditors.—Judge.

A Useful Remedy.

Little Jamie, aged three, was playing with his little friend, Jack. At the time Jamie chanced to have a rather heavy cold and was sneezing quite often. Jack's mother heard him several times and sympathetically asked: "Why, Jamie, what a cold you have! Doesn't your mother give you anything for it?" "Yes ma'am," Jamie very respectfully answered, "she gives me a clean handkerchief," whereupon he produced the prescribed "remedy."—*The Delineator* for October.

"Long introductions when a man has a speech to make are a bore," said former Senator John C. Spooner. "I have had all kinds, but the most satisfactory one in my career was that of a German mayor of a small town in my State, Wisconsin.

"I was to make a political address and the opera house was crowded. When it came time to begin the mayor got up.

"'Mine friends,' he said, 'I haf asked been to introduce Senator Spooner, who is to make a speech, yes. Vell, I haf dit so, and he vill now do so.'"—*Saturday Evening Post*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—1,000 Sisters to send for sample of Bonnet 'Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

WANTED—Partner to take \$1,000 interest in and manage large dairy farm in Michigan. Also 80 acres wild land for sale \$10 per acre. J. L. Garrison, 361 E. 69th St., Chicago, Ill.

FOR SALE—One set of 31 vols., Encyclopedia Britannica with Revised American Supplement. Late Edition. (New.) Publishers' price, \$120.00. My price with case, \$75.00 f. o. b. Girard.—Luther Petry, Girard, Ala.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass Creek and Government measurements show that there is an abundant and never failing runoff for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

Rare Ranch Bargain

IN ORDER TO CENTER OUR EFFORTS UPON THE DEVELOPMENT OF OUR TOWN OF MIAMI AND IRRIGATED LANDS IN MAIN PORTION OF MIAMI VALLEY, WE HAVE DECIDED TO OFFER FOR SALE OUR FAMOUS OLD RANCH HEADQUARTERS AWAY UNDER THE CURRENT PRICE OF SUCH LANDS IN THIS COUNTRY.

The ranch contains about 750 acres of fine, deep, rich agricultural land—forty acres reservoir water right from Farmers' Development Company mammoth irrigation reservoir, 20 acres alfalfa and natural hay land, about 100 acres in all under cultivation; natural hay land watered from floods and by underflow. A large portion of the balance could be placed under irrigation, but is capable of producing as good crops as any lands in the southwest through the natural rainfall. Entire tract fenced with substantial wire fences; crossed by three streams, one of which is the Rayado River. Abundance of fine water all over the tract for domestic purposes and for stock water. An ideal fancy sheep, cattle, mule or horse ranch.

Good well, large cistern, three substantial residences, large commissary house, two good stables, other out buildings and corrals.

Remember this land is a part of the famous MIAMI VALLEY, which is supplied with first-class church and school privileges, ideal climate, beautiful natural surroundings, the finest of people—in short the ranch is situated in the midst of an ideal home land.

\$11,000.00 FROM QUICK PURCHASER WILL TAKE ENTIRE TRACT WITH ALL IMPROVEMENTS, ONE-HALF CASH, BALANCE TO SUIT PURCHASER.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

YOUR CHOICE OF LOCATION

"Church Extension by Colonization" is our Motto. We are locating our second Colony, with others to follow in other states in the near future.

COLONY NUMBER ONE

is located in the famous San Joaquin Valley, in "Sunny Stanislaus" county, near the center of California, adjoining the new town of EMPIRE. An organized Church of the Brethren is holding regular services and Sunday school in the new colony.

This location was selected because of its fine climate; snows and thunder storms are unknown there; because of its rich soil and fine irrigation system enable a great variety of crops to be grown; and because the excellent transportation facilities to the nearby markets make it easy to dispose of the products to good advantage.

Alfalfa is cut from four to six times a year, yielding from five to ten tons of hay annually, which sells from \$10.00 to \$15.00 per ton. All kinds of stock, dairying and poultry are handled with profit. The alfalfa remains green all winter.

All kinds of California fruits, nuts, berries and truck can be grown here, yielding good incomes.

A good Dairy Cow will yield about \$120.00 annually.

WHAT OTHERS SAY

A Pennsylvanian who has lived near Empire for five was one year old and over, yielded nine tons per acre this year. We have 90 acres in alfalfa and are preparing to seed 100 acres more."—J. M. Bombarger.

than any thing I ever saw, you should not have much trouble in locating people here, even if prices are a little high.

Personally I am partial to the land around Empire. After about three week's investigation I find the land almost faultless in location, soil, drainage, railroads to markets. It will stand the very closest inspection."

COLONY NUMBER TWO

This colony is being located near Portage la Prairie, Manitoba, in the great wheat Belt of Canada, about sixty miles west of Winnipeg, the Chicago of Western Canada, a city of over 100,000 population.

Four trunk-line railroads pass through the section in which the colony is located, giving excellent transportation to nearby markets. The raising of stock, wheat, oats, barley and grass are the principal pursuits here. Immense crops are grown annually of these cereals, wheat yielding from 20 to 40 bushels per acre. Lands are little higher here than in the newer sections; wheat brings from 10 to 15 cents per bushel more than in the western provinces. Homeseekers will find it advantageous to investigate our colony propositions here and elsewhere. Write us for fuller information about prices, terms and special rates for homeseekers.

PRACTICAL HELPS FOR RALLY DAY

NEW CELLULOID BOOKMARK

With the words "Rally Day" lithographed on one side of the bookmark; and with a reproduction of the Conquest and United States flags. These souvenirs may be given to members of the school as a constant reminder of the recipient's duties to and

Actual Size

privileges in the school. Many will use them in the Bible in connection with the daily readings and the study of the lesson. Each bookmark has a double silk cord and tassel. Price, 4 cents each; 40 cents a dozen, or \$3.00 a 100, postpaid.

NEW CELLULOID RALLY DAY BUTTON IN COLORS

1

3

Price of either numbers 1, 2 or 3, 20 cents a dozen; or \$1.50 a 100, postpaid.

RALLY DAY INVITATION IN WIRELESS TELEGRAM FORM

Contains a short, crisp, businesslike message, prepared in such a manner as to secure the presence of every teacher or officer, and pupil in addition to the parents and visitors. TELEGRAM FORMS, price, 40 cents a 100, postpaid. SPECIAL TELEGRAM FORM ENVELOPES. Price, 40 cents a 100, postpaid.

NEW CELLULOID FLAG PINS

These pins may be used to stimulate attendance on Rally Day. Distribute them in quantities to all members of the school who will promise to give one to each friend who agrees to attend the Rally Day services, wearing the pins. Organize all those who undertake to give out the pins into two divisions; then see which division succeeds in bringing out the largest number. Let one division use the Conquest flag pins, and the other the United States flag pins.

Price, 30 cents a dozen, or \$2.00 a 100, postpaid.

NEW ILLUSTRATED RALLY DAY INVITATION POST CARDS

For the use of Superintendents and Teachers
Designed to help increasing the attendance

to be sent previous to Rally Day to the members of every class or department, including the CRADLE ROLL AND HOME DEPARTMENT, and especially to those who have been irregular in attendance. Space is provided for filling in the date of Rally Day, and for the signature of the superintendent of any of the various departments, or of the teacher.

ORDER BY FORM AND LETTER.

FORM A. **Post Card**, with the reproduction of the Rally Day bookmark, in colors, containing a printed invitation; but without the name of Teacher or Superintendent, so that either could sign this card.

FORM B. **Post Card**, with the reproduction of Rally Day bookmark in colors. Without any printed matter whatever, so that you can have your own invitation printed on this form.

FORM C. **Plain Card**, same size as forms A and B, but not in Post Card Form. For distribution in the school or by messenger service. With the reproduction of the Rally Day bookmark in colors; containing the printed invitation; but without the

printed name of teacher or superintendent, so that either could sign this card.

FORM D. **Post Card**, Printed in colors, with an original design of an American boy Announcing Rally Day through the megaphone. The wording is brief and to the point; a space is left for the signature of the teacher or superintendent. This would be an excellent card to send to every member of the school, particularly to the Primary, Junior and Intermediate departments.

Price of either Form A, B, C or D, 60 cents a 100; \$2.75 for 500; or \$5.00 a 1,000, postpaid.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Rare Ranch Bargain

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

Ask about our "One Dollar Cradle Roll Outfit."

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre."

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

THE UNITED STATES LIFE SAVING SERVICE

JOHN S. FERNALD

THOSE who believe the world is growing better, that the bond of human brotherhood is growing stronger, and that the influences of the teachings of Jesus are being felt more and more as the decades roll around, have only to look at conditions today and compare them with those of the past to be materially strengthened in that belief. This is particularly noticeable in the attitude of the governments and of the people at large, in all civilized nations, towards the sick and wounded in war, shipwrecked seamen, and all who may be in poverty or suffering in any of the walks of life. The Red Cross movement in behalf of the sick and wounded soldier and the Life Saving service in behalf of the shipwrecked sailor are noticeable examples of this improved condition of affairs. Compare the condition of a wounded soldier on the field of battle in the early days of the nineteenth century with one of the present day; or, note the treatment accorded to a shipwrecked sailor, his craft and her cargo, a hundred years ago as compared with today.

In the early days the kind-hearted, well-meaning Christian people, living along the coasts where wrecks

arose for plundering a stranded vessel, under cover of the darkness, they allowed their greed to overcome their scruples and, in addition to stripping the vessel of her fittings, and taking the cargo, often neglected the helpless and suffering seamen, and sometimes even descended to murder by finishing on the unfortunates

Metallic Liferaft.

the work of death so nearly completed by cold and wave. Some of the more conscienceless of these wreckers have been known to lure vessels, by false lights and other means, upon dangerous rocks in order to give them the chance for plunder. And while the better-disposed people were powerless against these semi-pirates the governments stood aloof and interfered only in the most flagrant cases.

Today all this is changed. Every civilized nation having a seacoast and dangerous places now supports along with its lighthouse service [See INGLENOOK, March 24, 1908,] a life-saving service, for rescuing seamen in danger and for recovering for the rightful owners as much as possible of the endangered vessels and cargoes.

The United States life-saving service has two hundred and eighty stations, of which ninety-three are on the Atlantic coast, eight on the Gulf of Mexico, sixty-one on the Great Lakes and eighteen on the Pacific coast. Each of these stations has a superintendent and a crew of surfmen, all trained in the most effective methods of work, and fully provided with

Metallic Lifeboat, Showing Air Chambers Along the Sides and in Both Ends.

were wont to occur, were overpowered by a class of men known as "wreckers." Nominally these men were honest, law-abiding citizens—farmers, fishermen, mechanics, merchants, etc., but when the occasion

apparatus, medical and surgical supplies, food, clothing and other necessities.

The older surf boats are of wood, but those added recently are of metal, and are so built and equipped with air-chambers that they will right themselves when capsized, and will not sink even when filled with water and loaded to their utmost capacity. All the larger ones are propelled by gasoline engines, which relieves the crews of the arduous labor of rowing, besides saving much time in making the trips. The men are also in much better condition for their difficult and

Breeches Buoy with Trolley Attached to the Mast of a Vessel.

dangerous work, at wreck and shore, than if fatigued by a long hard pull at the oars through angry seas. Metallic life rafts, cork jackets and life preservers are also kept at the stations, and are carried on vessels, particularly on passenger steamers. The law provides that every vessel carrying passengers shall always have, easy of access, certain necessary equipment in this line, and fixes the minimum in proportion to the number of passengers the vessel is licensed to carry. The life raft consists of two cigar-shaped metal chambers, with a strong framework between them, making an oblong raft. The two surfaces are alike so that it makes no difference which comes uppermost when the raft is thrown into the sea. Both surfaces are provided with row-locks, oars, life lines, etc.

Next in importance to the boats and rafts come the "breeches buoys," but they can only be used when the wreck is within a comparatively short distance of the shore. In using this appliance a small line is thrown to the vessel if near enough, or if not a shot with a line attached is fired from a small cannon across the vessel. It was the hand throwing of this kind of a line that suggested the famous hymn, "Thrown out the life line." The men on the vessel, by use of this line, haul out a cable, which they make fast to a mast or other high place. The other end is securely anchored by the life savers on shore. A trolley runs on the cable and beneath it hangs the breeches buoy, a large ring into which the imperilled person is fastened and hauled by strong and willing hands along the trolley cable to the shore.

During the last fiscal year the endangered vessels on the coasts of the United States numbered 1,094,

were valued, with their cargoes at \$13,530,225, and had on board 5,712 persons. Of these totals, the number of lives lost was but twenty-two, of vessels totally lost fifty-six, and of property lost \$1,863,790. The value of property saved was \$11,666,435.

Since the service was established, in 1871, the number of vessels in disaster within the scope of the life-saving service was 18,411, of a value, with their cargoes, of \$265,046,509. The value of property saved was \$211,124,032. Of the 127,395 persons involved in these disasters but 1,194 lives were lost.

The pay of the superintendents of the stations is \$1,000 per year, and of No. 1 surfmen \$70 per month, with thirty cents per day additional for rations.

The U. S. Treasury Department awards gold and silver medals for bravery in effecting or attempting rescues from drowning, and the official reports of many cases show valor, courage and devotion to duty that will rival, in real life, the wild-

est dreams of the romancist.

A MONUMENT TO A MISER.

ELIZABETH D. ROSENBERGER.

ON the twenty-ninth day of September, the school children of New Orleans lay garlands of flowers on a statue erected to a miser. This statue is the only one of its kind. It tells of the harsh judgment pronounced against the man whom New Orleans delights to honor since his death.

The story is one of romance, of adventure and tragedy. In the first year of this century there came to New Orleans a singularly handsome young man. Of Scotch-Irish parentage, he possessed business abilities of a high order, also a romantic nature which may account for some of his suffering. In his day New Orleans regarded herself the leading city of America, and John McDonough became a leading figure among the young men of the city. He fell in love with one of the belles of the city. She was beautiful and her father dreamed of a royal marriage for her. When John McDonough asked her father for the hand of his daughter, her father answered, "No." And he went on to say that she could not marry an American without money. "My daughter must marry into court life in the highest circles of Europe." Her father practically rebuilt New Orleans after the great fire. His word was undisputed. He made his daughter marry de Pontalba, page to the Emperor Napoleon. It was she who with her Louisiana millions, bought and demolished the great palace built by Louis XIV for the Duc de Maine, so that it might not be occupied by the enemy.

She reserved its treasures, and built a new palace which is now owned by a Rothschild at a price of 5,000,000 francs. She had all the glory and honor her ambitious old father craved for her.

And what of John McDonough? He found after awhile that he loved another woman far better than the one in a palace across the sea. The woman of his heart had come from his own State of Maryland. John McDonough went to her father, confident that as he had the girl's love, there was naught in his life to deserve him a "no" from her parents. What was his surprise when her father said he could marry her only if he became a Catholic. To this proposition McDonough answered "no" forever. He was a Presbyterian and he could not deny the faith of his fathers, not even for the girl he loved. He lived, as well-placed bachelors of his day lived, in a splendid house with dozens of slaves. He and the girl met constantly for many years; then he asked her father for the last time for his daughter's hand. "If you renounce your creed," said the father.

"I should not be worthy of your daughter if I did," said McDonough sadly.

Then the girl said if she could not marry McDonough, she would marry no other; she became a nun in the old Ursuline Chapel. And he—what did he do? Dropped the world away from him too. He gave up his house in town, his horses, his dinners, his brilliant sunshiny life, took all his slaves and went across the river to a country home. At first society took his departure with melancholy; they remembered his cavalier hospitality and his lovable nature, and they hoped his retirement was a whim—so romantic, but bound to pass over.

The years went by and McDonough came over to the city every day in his rowboat. He established a gloomy place of business and stayed there all day long; in the evening he went back to his home. After awhile his friends looked on him with suspicion; they said he was coining money for money's sake—he was a miser. And of all things, that particular gay society despised a miser. To make money to spend, ah! that was all right; but to make money to hoard was too contemptible to be tolerated. His clothes were threadbare and old, he grew gray and bent in his prime. They told stories of his stingy marketing, of two bits' worth of this and a picayune's worth of that. As he grew old and bent, he went every Sunday afternoon to visit the girl he had loved in his youth. Think of the pathos of this; they may have talked of their old hopes and plans when they were young; now they were both old and sad.

He knew what it was to be shunned by all of his old friends. At the end of thirty-five years of this life, he died and his slaves buried him. New Orleans cared little, her only curiosity was as to how much money he

had left. But when the will was read in the presence of distinguished persons, the city of New Orleans sat aghast, tear-stricken, repentant. The will was the talk of the business men of the town for weeks. He had left the sum of \$1,000,000, an enormous fortune for those days, to the children of the city. It was to build for them public schoolhouses, the first in the country. Attached to the will was the outline of a far-reaching scheme of education for his beloved children. And these children had shunned and feared him as the bugaboo of the nursery. His long will was the most pathetic document of its kind ever recorded. It told of his great schemes, of his loneliness, how he had shrunk more bitterly into himself when he was judged unjustly. At the end of it there was this one tragic note: "In return for this I ask that the little children shall come sometimes and plant a few flowers above my grave." So it is that the children of the city lay wreaths of flowers upon his monument.

It had been said he starved his slaves, and dozens of them ran off to sea to escape his cruel treatment. He worked them until long past midnight and then compelled them to begin again before daylight, said gossip; when they taunted him about it he said nothing. His will explained all. These slaves were working out their freedom. He said in his will, when people taunted him he wondered that they never asked, why when his slaves worked at midnight they always sang as they worked. He kept an account of their working hours and as each man worked out his price he was free and he went to the republic of Liberia. At his death eighty slaves were freed and sent to the Liberian Colony. The American Colonization Society has sent eighteen thousand colored people there. McDonough, the miser, was the founder of this society, of which Henry Clay was afterward president. His letters have been bound into a volume. In one of them he says that two things he had always dearly loved,—children and flowers. For us the lesson of his life is contained in the solemn warning, "Judge not that ye be not judged."

A CHILD OF GOD.

Do not dare to think that a child of God can worthily work out his career or worthily serve God's other children unless he does both in the love and fear of God, their Father. Be sure that ambition and charity themselves will grow mean unless they are both inspired and exalted by religion.—*Phillips Brooks*.

THE best college is that in which the student is brought into the closest contact with teachers of ability and of Christian character. Mere lectures, however able, do not greatly influence the character of the students. It is personal contact.—*Southern Presbyterian*.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXVII. In the House of His Friends.

ONE day Elder Stover took me out into the little graveyard they were starting in Bulsar, for no sooner do you stop long at any place than you have to start a cemetery. I wondered why he took such pains to show me about, and when he said, "How would you like to be buried here?" I began to look at myself from a decidedly earnest viewpoint. I was ill,—hadn't been well for some time, and in fact I was frightened at my physical condition. For no matter how much quinine I took, or how careful I was, the fever was

coming, and it was more than the malarial fever, too. Then Christmas dinner was served in the Bulsar mission house. I was unwise. I overate. To make it worse, I had gone next to Novsari, where D. L. Forney and wife treated me so kindly, and here they, too, made me a Christmas feast, two Christmas dinners in two

days. So when I came before my fine audience that night in Novsari, presided over by the mayor in state, and who also interpreted my speech for me as I proceeded, sentence by sentence, I found myself too weak to finish as I had expected.

I was decidedly ill.

I took the train back to Bombay, passing Bulsar on the way where Brother Stover had erected a tabernacle for me, or rather a platform over which hung a

big awning, and had gathered together the elect and the Aleck of Bulsar to hear me recite from Riley and Tennyson and Shakespeare, unable now to raise my head from the hard seat to cast even a glance at the spot where I had enjoyed such a triumph,—reaching the hospital late at night.

At once the servants carried me up the stone stairway in a sort of sedan chair and I was given a bed, a bed with sideboards on to keep delirious patients from jumping out.

When I was recovering from the typhoid, five weeks

later, they told me how sick I had been, for they had been fooling me all the time into believing that it was malaria and not typhoid that had me down. They should have told me the truth.

It was the most awful experience of my life, so far from home and so helpless. But angels of

The Graves of Adam and Alice Ebey's Two Children in the Beautiful Little Cemetery at Bulsar, India.

mercy hovered over that hospital and God was gracious to me. The nurses, most of them English, trained in their work, were like mothers. Besides, I was paying my way there, only thirty-three cents a day, for everything, but still paying my way, for I could have entered another ward as a free patient.

I do not believe that there is in all the United States such another hospital as the St. George's Hospital in Bombay.

I would take my chances there every time, but I didn't know it when I was most sick, as I do now, and so I was afraid.

The saddest sight in this world is to see a lost soul going into eternity as a derelict.

Let me draw you a lesson from my hospital experience in this country. I will tell it just as it happened in the simplest words. It was in this hospital.

While convalescing from the typhoid, one afternoon a tall, young, handsome, English naval officer entered the wide-open veranda and stood looking down upon the unused bed on my right. The strange bewilderment of every new hospital patient passed over his face as he finally surrendered to the inevitable. He first removed his heavy helmet, rattling with decoration and shining with metallic lustre. Then he took off his tie and unbuttoned his collar and laid them down, looking as if he were about to put them all on again. Then he came to his shoes. He was very long untying the laces. They wouldn't come loose. He was very weak and very sick but that wasn't the reason it took him so long. It was a hospital bed. People who never lie upon one get the idea that their occupants seldom rise again. Then he looked at his coat, blazing with medals of honor,—one of

them pinned there by Queen Victoria's own hand. But that had to come off,—that coat, squared with corded boxing and richly hung with lace. When ready, he put on the hospital pajamas and drew the light cover over him. On the other side of the room from me lay a young Irishman, ill with what was supposed to be, at the beginning, Bubonic Plague. He had been condemned to go to the pesthouse, where of course he would have caught the plague and probably died with it. His malady was only a severe boil under the arm. Next to me on my left was an Englishman, an official of Bombay, and down the line wan faces of Germans, Greeks and Hindus peeped from under white covers.

And the naval officer on my right looked just like the rest of us,—the Irishman, the Englishman, the American, for we all look alike under hospital covers and in graveyards.

Bibles and books had been furnished to the other patients. They were glad to get them. But this man on my right refused to take them from the hand of the nurse who had carried them to his bed one day.

His disease was peritonitis, so common in India, and also so incurable there. He was dying with it, and his sufferings were very great.

"Oh, dear! Oh, dear!" he would cry, "bring me another drink."

Contrary to the orders of doctors and nurse I had risen several times to help him, causing me a relapse and much suffering and added doctor bill a little later.

It was his last day, for two weeks had passed, and they had given him up.

That evening two officers from the battleships lying in the harbor came into the hospital to visit their fellow-officer in arms.

"Have you any message to send to your wife in England Charles?" asked the officer as he pressed the thin, white hand of the dying man.

"Yes, officer, in the morning, come in the morning, won't you?"

"Yes, Charles, we'll be back at five in the morning."

Now we all knew that the officers did not intend to return in the morning. They knew that Charlie

would not be there at that time, for the doctor had told them that the boy could not live through the night. But he thought he would feel better in the morning.

At nine o'clock he was still worse. Then the day nurse came into the ward. I knew then that something was going to happen, for she never came into the ward at night unless some one was going to die. They didn't die because she came, but she came because she knew they would die before morning.

As she passed my bed I called out to her and she told me that the young man could not live till morning.

"Can not live till morning!" I wonder what she is going to tell some other patient here about me if I get worse! "Can not live till morning!" Then he is going to die. Yes, that's what he must do if he can't live. Till morning!

An Oriental "Cab."

At ten o'clock she came in again and asked him if she might not send for the chaplain.

"No," he replied, "I don't want the chaplain."

"May I send for the priest, then?" she timidly asked, thinking he might be a Catholic.

"No, I don't want the priest."

"May I pray for you, then?"

He still answered in the negative.

A little later she came in again and asked the same questions, and was again refused. Then she knelt at his pillow, as he moaned and breathed so hard with the temperature so high, and she read from a little English prayer book a prayer for the dying.

When she began you could have heard a pin fall over that ward, for no one slept that night. Before she had ended, you could have heard the head of the pin fall if it could have become detached. I never was in favor of *reading* a prayer until that night. That was the only kind that that poor girl could have prayed out loud for that boy and for us all. It was so well-worded, and I know that for one at least that prayer went straight to the Throne.

At one o'clock he called for a light.

"It is getting dark. I want more light. Bring a light."

There were two lights burning near his bed, but the trouble with Charlie was the *hand of Death* passing over his face.

Another light was brought as he called out at top of his voice,

"Ainsworth! Ainsworth!"

Ainsworth was a rough companion of his in the third bed down. At the second call he was out on the floor and by his side.

"Hold my hand, Ainsworth, and stand by me."

"I will, Charles," said Ainsworth, and they clasped hands.

And he couldn't have let go, if he had tried. It was the death grip of two bad boys away off in India.

I sprang from my bed, weak as I was, and limped to his side. I hoped that perhaps he might give me the chance to pray for him or to speak a word of hope into his fevered ear. As much as I wanted to get out of that hospital and home again I believe I would have

given my chances for recovery if I could have placed the Gospel Compass into his hands just then.

But his eyes were focused at too long a range then. They were looking across foaming oceans, burning deserts, snow-capped mountains and extended continents;—thinking they saw a little cottage in England, nestling among the hawthorne and cherry trees, in Kent, near London;—thinking they saw through the shutters into that little cottage,—thinking they saw the wife there, busy with her needle and a little flaxen-haired boy by her side, both now and then looking at the photograph of the father on the mantel, the father dying now ten thousand miles away, in India. That picture, ten thousand miles away was the *foreground*, and we were the *background* of the sailor's last picture.

His head fell back, his pulse quivered, his breath halted.

At fifteen minutes after one, at night, he launched his bark upon the sea of Death. At *fifteen minutes after one*, he dared to go before his Judge with his pilot.

That afternoon at four o'clock the bell tolled thirty times for Charlie as the nurse played on the little organ in the little chapel when we heard the *tramp, tramp, tramp* of

India Draymen.

the feet of those who carried Charlie's body down to the boat bound for England, going back to the little cottage in Kent.

Through all that terrible experience of illness and death of patients around me I always saw among pictures of home in my memory the quiet mission field of the Brethren at Bulsar and Novsari; again I walked through the leafy bowers and looked for the day to come if ever it would, when again I might be there in company with my friends of bygone days.

In all that sickness my one prayer was, "Save me that I might save others."

All Rights Reserved.

CONVERSION is no repairing of the old building; but it takes all down and erects a new structure. The sincere Christian is quite a new fabric, from the foundation to the top-stone all new.—*Alleine*.

SMALL COLLEGE VS. UNIVERSITY

JOHN WOODARD

WE have heard a great deal about the "small college" of late years. From what some have said, we might get the idea that the large school or university is an unnecessary evil and we could get along better without it. Others seem to think that the university is the only institution of higher learning, and that the work of the small college could be much better done in a university. If the first view is correct, we would expect to see the universities disappear and a number of small colleges take their place, but the universities are becoming larger and stronger every year. If the second view is correct, we might expect the disappearance of the small college, but this institution continues to flourish and increase in numbers. Neither view is wholly correct. These institutions are not competitive. Each has a distinct field in which to operate. If either steps out of its own field, it attempts to compete with the others and causes trouble. The small college is an institution with relatively small attendance. The students come in close contact with each other and with members of the faculty. The teachers, for the most part at least, are men and women who teach for the good they can do and not merely for their salaries. The classes are small and the individual student receives a great deal of attention. The financial support is not strong, so library and laboratory facilities are limited.

On the other hand the university is a large institution, many students, large faculty, much money back of it, good library and laboratory facilities. The university can and does give professional work, for it can get the equipment and the small college can't. The opportunities for graduate work in the university are better than in the small college. The difference in equipment is the reason. The head professors in the university are much stronger men than the teachers in the small college, but many of the lower teachers are much inferior. They are often teaching merely for the salary and so are indifferent to the welfare of the student or are lacking in teaching ability and were appointed on the strength of their scholarship.

For a general college course to broaden one out and make him better prepared to take up the study of a trade or profession, the small college is the place. The student receives more individual attention and has better teachers in his freshman year, the time when he especially needs good teachers. For instruction in professional work and graduate study in any line, the university is the place. It has the equipment and the teachers for the work. The student who graduates

from the high school at eighteen years or earlier and has had no experience in coming in contact with the outer world has no business in a university. He needs at least two and better three or four years in a small college to prepare him for the university. One of the chief causes of the bad moral and spiritual condition of university students is that we take children right from the high school, away from the control of home and parents, before they have developed strength of character sufficient to overcome the evils they must encounter, and place them in a large institution where they are liable to meet with "divers temptations" and have practically no moral restraint.

In a university it is easy to get among bad companions without anyone paying any attention. There are many opportunities to get into mischief if one can keep it quiet, and that is easy to do in a large institution. A large school is like a large city, the individual is lost in the mass. Boys and girls have no business in either a large city or a university without the controlling influence of home and the advice of parents or close friends until, by age or experience, they have developed a character that is proof against the temptations which may be found in a large city or university. It is easy to resist temptation when one knows that parents and friends will hear of it. The temptation only comes in full force when one knows that it is easy to hide the fault and no one need ever know. It takes a strong character to resist a temptation under these conditions. Some people never develop such a character, others develop it at an early age, even before the age of twenty-one. The age varies with the individual, but it is safe to say that many, who could not resist such a temptation before the age of twenty-one, could resist after twenty-one. It would be well if students did not enter the university before they are twenty-one.

If they finish the high school earlier let them go to a small college where the temptations are much less and the precepts and example of their teachers will help them develop a stronger character. The chief business of the small college is to develop character,—to make men and women. It is a noble work. Let them stay with that work. The chief business of the university is to make scholars and train for the professions. Let them stick to that work. The character should be developed before the student enters the university. Through their general college courses, the universities have encroached on the work of the small colleges. They have taken the students right from the high school and turned them loose to "root hog or

die." Some have pulled through all right but others have died, morally and spiritually.

But there is now a tendency in the right direction. For several years, some of the universities have been advising students to take two or more years of general college work before beginning the technical work of the professional schools. Some have required two years' college work before admitting to regular standing in the medical and law departments. Now the University of Missouri demands two years' college work before admission to any professional department except agriculture. They should not have made this exception.

This is a step in the right direction, but they should go farther. Let them require two years' college work for admission to regular standing in the university, but admit students over twenty-one years old as special students. If a special student, either by exceptionally good work in the course he is pursuing or by taking work outside of his course, shows that he is as well qualified to take a degree as the regular students, change him to the regular standing and give him his degree. In this way, the mature student, who had been denied early advantages would not be hindered from completing a professional course in a short time, and at the same time, immature students would be kept out of the universities.—*Lowry Hall, Columbia, Mo.*

ON THE ROUTE.

M. M. WINESBURG.

WE left Birmingham, Ala., bound for Cincinnati, at six o'clock in the evening on the Queen and Crescent road, or the A., G. & S.—which some of the Alabama people translate into "The Alligator Going South." But the alligator had its nose turned to the North when we got aboard and was soon puffing into the mountains of northeastern Alabama.

The further we got into the mountains the wilder they looked. Deep gorges with rock-ribbed sides, and sharp peaks heavily wooded met the eye on all sides, and then suddenly the train would chug out into an open glade where some enterprising mountaineer was trying to raise a crop on the scanty soil, and the next moment would slide into another deep defile with a rushing roar. I saw but a very few streams of water and they were quite small.

It was raining when we left Birmingham and it was still raining when our train chugged out onto a stretch of table land where the timber was more of a scrubby nature. Afar on the north of the plateau stretched a long spur of mountains that looked blue in the distance, while white clouds rolled around their summits. Now, of course I could not say for sure, but I think this blue range was the southern spur of the Cumberland Mountains, for our route ran north-east and so did the mountains, which we never quite

lost sight of until darkness hid them from our view.

I had been hoping that we would have a clear evening so that we could see the city of Chattanooga and the monument on Lookout Mountain which can be seen from the train, but when our train pulled into Chattanooga it was so dark that we could not see anything but the lights. Olympia Park was illuminated and the arc lights twinkled like stars through the darkness. I was disappointed, for I had not been able to see anything but the lights and a glimpse of the river when the train crossed the bridge. So I huddled down and went to sleep.

At daylight the next morning we were still in a rather rough country, though it was not so rough as the first part of our journey had been, but at one place I will confess to feeling my hair pull, for the train suddenly began to slow down through a cut or gorge, and next it was slowly creeping out onto a bridge which spanned a narrow valley and river below. One could hardly feel the train moving, it went so slow across the bridge, and either way one looked from the windows, up or down stream, were sheer walls down to the narrow valley, while the muddy river flowed sullenly below us. One did not get much assurance of safety by hearing a fellow passenger say that he had crossed that bridge many a time but never as slow as the train went then and it would be a long time before he crossed it again, for he had heard the bridge was unsafe,—and I know that I breathed freer when we were safe on the other side.

After we crossed the walled-in valley, the rugged crags began to melt into gently sloping hills and by the time we reached Danville the train was running through rolling land on which were growing fine crops, and from there on to Lexington, and far on this side of Lexington, the country was simply beautiful. The rolling fields of grass, grain and corn and the herds of cattle and sheep were a pleasing sight to the eye. The wheat was turning a golden hue and the clover red with bloom. Here were farmhouses with orchards, gardens and grassy lawns, and sleek horses and cattle grazing in the fields, or drinking from the watering ponds. There seemed to be a pond or small lake at every farm, some of them large enough to float a skiff. This was my first trip through the famous blue-grass region around Lexington and it will live a long time in my memory.

The country was more broken and hilly as we drew near to the Ohio River, but the waters of the old Ohio looked refreshing as the train sped over it and landed us in Cincinnati. Here we left the Q. & C. and had time enough to get a cup of coffee before we boarded the B. & O., eastbound for our native city.

From Cincinnati we sped eastward through a beautiful level country, amid fields of waving grass and ripening grain—corn and garden truck enough to feed

thousands not to mention the orchards and vinelands. Anyone seeing us looking at the fruitful fields as our train clinked and throbbed onward, would have thought—and probably many did think—that we had never seen a field of wheat or grass in our lives until that moment. But when one has not seen wheat or meadow fields for a while it looks good to see them

steep bluff (as they are very fond of herbs and mosses as well as wild flowers only found there), one noticing them will almost invariably find one posted on some prominent point near by as a sentinel while the others feed, and even then the ones feeding are constantly raising their heads and watching the whole surrounding country every few seconds, and though the hunter

very cautiously tries to approach them whether partially concealed or not, they are almost sure to notice him.

They can often be seen from a long distance feeding on some grassy spot and are easily distinguished from other stock because of the habit they have of raising their head high in the air and closely scrutinizing every suspicious-looking object in sight. This they do at short intervals of only a few seconds and then resume their grazing or browsing.

And it is necessary to see them before they locate you and never let them see you or they are almost sure to run to cover

Lookout Mountain, Tennessee.

again—and I stared until my eyes ached, and then shut them until they were rested and stared again.

We had left the South in a rain and we arrived in our native city in a pourdown, which was not a very cheering home-coming, but we had the pleasure of surprising our friends who were not expecting us.

Just like a glimpse of paradise
Seemed the fields of golden grain,
And the emerald seas of meadow grass
That flashed by the rushing train.

When I trod again Virginia's soil,
Along each shady lane;
The wildrose's blush and the clover's bloom
Greeted me once again.

Wheeling, W. Va.

THE DEER.

H. D. MICHAEL.

THE characteristics of some of our wild animals are well worth a careful study, as they form a large and interesting field for thought. There are but few more pronounced than the watchfulness of the deer, so we will call your attention to it in a general way.

That the deer are always on the alert will be testified to by any one that has hunted them, as many a beginner has found to his sorrow and many a one after some experience has had it brought to his mind repeatedly by being foiled by their careful watching at all times.

When two or more deer are feeding on some grassy nook or small prairie or even on the side of some

at once and escape.

Out hunting on one of my favorite places once I noticed a bunch of three deer that appeared to be fine large ones feeding on a prairie one-half mile or more away, but being able to tell they were deer by their habits I at once planned to get within rifle range of them if possible, so cautiously crept back into the dark woods, as I was then in the edge of them, and by a circuitous route I came to a large rocky bluff which I had planned to ascend, where I would be just a nice rifle range above them and could roll the bullets down on to them.

But climb as cautiously and as noiselessly as I possibly could, the instant I showed the smallest part of my physiognomy above the rock that it was possible for me to and still be able to see over, I discovered the fact that the one on duty as sentinel (a fine large stag) had riveted his eyes upon me, leaving me but the one chance,—that of shooting at it even though I was in no position to get the others as I had hoped to be able to do.

At the crack of the gun the deer dropped, but not able to get a chance at the other two I had to be content with one.

This I only cite as an instance of how watchful they are, as that one had seen me as soon as I peeped over the bluff.

Then turn to the very young ones, the wee fawns, and you may think that they would be careless and

NATURE STUDIES

PRINCIPLES OF AGRICULTURE.

JOHN H. NOWLAN.

Chapter VIII.

WHAT is an insect? Ask that question and you will receive many amusing answers. Recently a bright, observing boy very gravely informed me that the centipede is an insect. Another said, "An insect is a bug," which by the way is the view taken by the majority of people.

The word insect means *cut in*. The body of the insect is *cut in* in two places making three divisions of the body. It has three pairs of legs—not more nor less—and usually has one or two pairs of wings.

The head of the insect has two large eyes. A careful examination of these shows each eye to be composed of one thousand or more single eyes. Such an eye is called a compound eye.

On the upper front part of the head is a pair of feelers called *antennæ*. These serve as organs of hearing and sometimes of smell.

The next part is called the thorax. To this is attached the legs and the wings if the insect has wings.

The rear portion is called the abdomen. They do not have lungs but breathe by means of openings along the side of the abdomen. If these become closed by any means the insect dies of suffocation. That is why anything greasy or sticky will kill an insect while not injurious to creatures with lungs.

Spiders have eight legs, therefore they are not classed with insects.

Though the farmer does not classify as we do—any small animate organism that is injurious to vegetation is a bug to him—yet in one thing he is agreed: that is, in the belief that they are injurious to his crops.

One authority estimates the damage done by insects in the United States and Canada at \$400,000,000 annually!

Insects are divided into several classes, the principal ones being flies, with two delicate wings—bees, wasps, and ants with four wings—true bugs with two membranous wings, the outer pair partly horny and partly overlapping each other—beetles with under wings similar to those of bugs but outer pair horny and meeting in a straight line down the back. Moths are usually classed with butterflies, but moths work at night and butterflies in the daytime.

It is important that the farmer learn the manner in

which insects feed in order that he may learn how to destroy them. Some chew their food, while others pierce plants or animals and suck food from the inside.

The former may be killed by spraying the plants on which they feed with poisons, while the other must be treated some other way—usually by spraying the insects themselves with an emulsion to close their breathing tubes and smother them.

Further, the farmer should learn to make a distinction between the useful and the harmful. Some are a positive benefit to man; as for instance the lady bug.

But whatever their relation to man, their life history is the same—first the egg, from which hatches a worm or caterpillar. This is the larva. With some this is the principal stage so far as damage is concerned. After a time the larva spins a cocoon around itself if the mature insect is a moth; attaches itself to some support if a butterfly; or if some other insect, hollows out a cavity in wood, earth, etc. Then it enters the pupa stage.

Examine one and you will find that it has the outlines of the complete insect, yet it has little or no motion and cannot eat at all.

After a period of rest the complete insect, imago, emerges and is ready to resume its work of feeding or to lay eggs to produce another brood.

Insects may not be mathematicians, but at least they multiply very rapidly. The queen bee will lay four thousand eggs per day; the mosquito from two hundred to four hundred per day; the white ant in two years will lay not less than forty million eggs. The bluebottle fly in one summer has five hundred million descendants unless something happens.

But pass the palm to the plant louse (*aphis*). It produces brood after brood in the same season and at the twelfth if all are living they amount to 1 with twenty-two ciphers annexed!

Among orchard pests the San Jose scale is the most dreaded. It is very minute but multiplies so rapidly that it is a very dangerous pest. At first farmers were advised to burn all infested trees, but now it has been proven by experiment that spraying with the mixture known as the lime-sulphur-salt mixture will kill the scale and not injure the trees. It will also kill all other scale insects. You can get a bulletin telling how to prepare it.

The codling moth does not injure the tree but at-

tacks the fruit, sometimes causing a loss of seventy-five per cent of the crop. The egg is laid just after the fall of the blossom, one moth laying from fifty to two hundred eggs. The larva soon eats into the apple and causes it to fall too soon.

As the larvæ usually crawl up the tree to spin their cocoon they may be trapped by putting a band of cloth around the tree for them to shelter under. Every few days collect and destroy these cocoons. In the fall destroy the brush under and around the tree and leave no place for them to winter.

Some of the others which space forbids to describe are the plum curculio, grape phylloxera, cankerworm, apple tree caterpillar, pear tree girdler, and peach borer.

The insect that causes the greatest loss is perhaps the chinch bug. In Illinois it caused a loss of \$4,000,000 in one year. It is hard to prevent the damage done by them, but by cleaning up all fencerows, brush piles, rubbish, etc., we may leave them no place to winter. They may also be killed by means of the kerosene emulsion or by using a gasoline torch.

The young of the plant louse are not hatched from eggs but are born alive. As all of them are females they increase at a rate that is astonishing.

They give off a sweet liquid called honey dew. Ants are very fond of this and often care for them in order to get the "milk" from their "cows."

Poisons are of no avail against them. Emulsions will kill them; and lady bugs, either larva or mature, are fond of them.

Cutworms are the larvæ of various moths and a source of much annoyance to the gardener and farmer. One of the best means of exterminating them is to mix one pound of Paris green with fifty or seventy-five pounds of bran. Moisten just before using and sweeten with molasses. Put a spoonful around newly-set plants and the worms will eat it in preference to green vegetation.

We can learn much about the life history of insects by watching them at work. If you have not the time to watch them in the fields make a breeding cage. Get a flower pot, fill partially with soil, and place on this a common lamp chimney. In this you can confine insects and watch them as they develop. Keep the soil damp and the chimney covered with a cloth. Place a plant in the cage for them to feed on. When they spin their cocoons put them away till spring, then put them in the cage and watch their development.

Bulletins.

99. Three Insect Enemies of Shade Trees.

127, 145, 146. Insecticides.

155. How Insects Affect Health in Rural Districts.

80. The Peach Twig Borer.

120. Insects Affecting Tobacco.

132. Insects Affecting Wheat.

172. Scale Insects and Mites on Citrus Trees.

Bordeaux Mixture.

4 pounds unslacked lime\$.04

6 pounds copper sulphate30

Dissolve each in twenty-five gallons of water. When thoroughly dissolved mix. Use wooden vessels.

To the above add one-half pound Paris green and you will have a mixture for both diseases and insects.

Kerosene Emulsion.

2 gallons kerosene.

1 lb. hard soap. (1 qt. soft soap.)

1 gallon water.

THE DEER.

(Continued from Page 993.)

easily found napping, as we would term it, but such is not the case.

Their watchfulness seems to be born in them, but why? All because nature, or an all-wise Creator, has provided them in that way to cope with their surrounding conditions, as their only chance of escape lies in flight.

Though that is their only chance of escape from their destroyers, both wild beasts and man, they can often make good their escape from even panthers as well as from the most wary hunter.

All this watchfulness on the part of these pretty creatures is done to save their life but we need only read the appalling statistics of the deaths caused by railroad, automobile, and boat accidents as well as many other places where lack of watchfulness of every detail is often the cause, to see how far man is behind, even the wild animals, in this trait of character.

How many lives might be saved if we were more watchful. But what should cause us most concern is how few are watchful of their spiritual enemies as the deer are of their natural enemies. If we were like them, we would be more watchful, not only for ourselves but also be a sentinel for others that we might assist more in overcoming the enemy of our souls.

So let us see if we cannot profit by the example set by the deer and "Watch therefore, for ye know not the day nor the hour wherein the Son of man cometh."

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

FOR the remainder of the trip Mr. Spickler will travel considerably faster than he has in the past in his journey around the world. He is scheduled to reach Golden Gate, San Francisco, early next month.

THE "melancholy days" are here, but much of the time we forget to be melancholy. There is so much gladness in Nature, as she proudly parades in her most gorgeous garments, that we cannot but be glad and gay with her.

THIS issue concludes the series of articles on the "Principles of Agriculture." We consider ourselves fortunate in being able to give these articles to our readers. The subject is so broad that the writer could only touch on some phases of it, but if what has been written will lead the reader farther into the field, much will have been accomplished by the effort.

THE SUICIDE.

ONE of the conditions of our present social life that is calling for a remedy is that which is producing our numberless suicides. Those who have at heart the welfare of society cannot help being shocked by the daily accounts of people who have taken their lives into their own hands for the purpose of ending them.

Often we meet the statement that this or that thing is on the increase with the argument that it is not really true,—that it just seems so because our means of communication are greater than they were in the past and things have now become familiar which then remained unknown to us. But such argument will not answer in this case. Years ago, within the sphere of our acquaintance, which is not greatly influenced by modern mechanical means of communication, a case of suicide was extremely rare. In many instances, too, the cause of even these rare cases could be clearly traced to an unbalanced mind. Today suicide among

people whom we know is many times multiplied and in many cases the sanity of the victim is unquestioned.

Individuals who make a study of society, as well as societies which have for their object the uplifting of the people, have noted the alarming increase in suicides and some of the latter are making efforts to stay the hand of the self-murderer. Among these is the Salvation Army which has established anti-suicide bureaus in this country and others where those who contemplate ending their life may unload their troubles and receive courage and hope to continue in the battle of life. The plan has proved to be a good one and much has been accomplished. Colonel Unsworth, of the Anti-Suicide Bureau in Great Britain has interviewed four thousand patients in the two and a half years of the bureau's existence. Among his visitors were one clergyman and many professional and business men.

The fact that nearly every calling in life has had suicides among its number shows that one's work does not have a very great influence in the matter and at the same time makes it the more difficult to discover the real cause. While there may be numberless direct influences more or less powerful in the individual cases, the general prevalence of suicides indicates that there must be some general cause.

It is impossible, of course, for one who has had no thoughts of self-destruction to have a very clear idea of the condition of mind that leads to that crime. As a rule life is very sweet to all of us. So clearly have men expressed this in their actions that we say, "Self-preservation is the first law of nature." Even if the present seems at times unbearable, the hope of better things, both in this life and in the life to come, gives one strength and courage to keep on.

Right here we may find the one general reason why many people are so reckless of life,—they have no thought of a future life, all their hopes are settled on this life and the things that belong to it, and when these offer no happy outlook they put an end to them. Paul says that if in this life only we have hope, we are of all men most miserable. Miserable indeed must be the man who has hedged in all the hopes and longings and aspirations of his soul with the boundaries of this world only to find them lying shattered at his feet. Another general reason may be found in the kid-glove religion we are giving people these days in which much is said about the compassionate love of God and little or nothing about the responsibility of man and his duty toward a compassionate God and the results if he fails in that duty.

It is to be hoped that we will look closely into this matter and see if there is not within our power some way to impress upon people the value of this life and its close relation with that which is to follow, so that they may cherish this life and use it to the honor and glory of God.

PARENTS OF TWENTY-ONE CHILDREN.

THIS interesting account of an unusually large family was sent to us by one of our contributors. It first appeared in the Bangor (Maine) *Daily News*:

"The only difference between me and John D. Rockefeller is that John D. Rockefeller has all the money and I have all the babies." These were the words used by Charles L. Dickey of Canaan, who is at the present time wearing the parental smile and rejoicing over the birth of his 21 children. They show signs of prosperity and their crops average with any farmer's in the town. They are proud of everything that they have and nature's soil seems to favor them in raising potatoes and corn as nature does in producing them babies.

"Don't you find so many children hard to bring up?" asked a representative of the *News* of Mr. Dickey.

"Yes," reluctantly answered Mr. Dickey, "but God put man here to earn his living by the sweat of his brow and woman to bear children to her sorrow, and if she does not she will have to suffer here or hereafter. We never complain of anything that God puts upon us to bear. I believe that God is using myself and Mrs. Dickey as examples to the world in having us raise children that people may see what God intended every family to do. You can see the system of raising children is the same as our system in other things. One man in this world has a lot of money, another man has none. I have a large family of children where others have not even one. Our system of things is wrong.

"You ask if I find it hard to support such a large family. I shall have to say yes, it is hard," but at the same time Mr. Dickey surveyed his thirteen children as they stood around the room with a fond fatherly look. "I find it hard, but I enjoy it. I love children. I not only like my own children, but I like all good boys and girls. There has never been a time when my children did not have enough to eat."

"By the way, Mr. Dickey," asked the caller, "how much flour does it take each year to feed your family?"

"Fourteen barrels," said Mr. Dickey.

"How many potatoes?"

"A hundred and fifteen bushels."

"How much wood do you burn in a year?"

"Twenty-three cords of good hard wood."

"I tell you," spoke Mr. Dickey in a proud way, "it's quite a job to bring up a large family and bring 'em up right, but I want to tell you right here that I have always been clear of debt and when I have bought anything I have paid for it at the time or else I have gone without. I own two farms and I don't owe a dollar to the world. I believe if I had just once let myself get behind I never could have supported this family."

Mr. Dickey is a small man in stature and has a good-natured look on his face at all times. He is very calm in disposition and gentle in manner. He appears to be

as proud of his whole family as if he had only one child. He says "My wife and I never find any fault with our station. We take things as they come. God never puts upon us anything that we cannot endure."

Mr. Dickey likes to talk about his family. He said not one of them had bad habits. "They do not use tobacco in any form nor do they use liquor."

The following is a list of the children: Mrs. May Bowman, Canaan; Mrs. Ada Ricker, Pittsfield; Arthur Dickey, Santa Rosa, Cal.; Mrs. Maude Chase, Benton; Mrs. Blossom Brooks, Augusta; Miss Nina Dickey, Portland; Elwin Dickey, Pittsfield; Mrs. Fay Moore, Clinton; Everett, Meritt, Lena, Margaret, Charles, Jr., Effie, Mildred, Ivan, Floyd, Arline, Theodore, Jessie, and "Baby" Dickey, all at home in Canaan.

The oldest child is 27 years old and the youngest about two weeks old. The twenty-one children have all been born at single births and none of them have ever been sick. The youngest child is a daughter, there being thirteen daughters and eight sons. The oldest son is a minister in California. Mrs. Dickey is 42 years old and Mr. Dickey is 51 years old. They are the grandparents of seven children.

The town of Canaan has to maintain a school in the "Dickey district," so-called, of the Dickey children, and much sport is derived from hearing the teacher call the roll. She has been known to call the name Dickey fifteen times each morning. It is usually a Dickey at the head of a class and perforce it must be a Dickey at the foot.

Mr. and Mrs. Dickey have had congratulations from ex-President Roosevelt and there have been people from many States who have visited this wonderful family.

**THE COUNTRY PEOPLE.**

"BIGOTED and narrow-minded" are charges frequently laid upon country people. They are no more bigoted and narrow-minded than their city brethren. The real farmer does think the country the only place worth living in, an entirely natural feeling. So does the town resident prefer starvation among the crowds to plenty in the quiet country. The sturdy, God-fearing men toiling through the heat of summer and the storms of winter are seldom so "broad" that no man knoweth the bounds of their belief, but they do stick to their chosen creeds in a way that others might imitate to advantage. In many a State the cry is going up that the country is forcing puritanical laws upon the city; but there is never the fear that the city will suffer from the low moral standard of the country. Rural residents have always stood for righteousness and temperance and justice and simplicity, and it will be an evil day when the standard is lowered.—*Northwestern Christian Advocate*.

THE HOME WORLD

LEPROSY

DR. S. B. MILLER

[THIS article is written as an effort at enlightenment to the INGLENOOK readers. The data are taken from writings of Drs. C. A. Penrose, Baltimore, and A. S. Ashmead, New York, as published in the *N. Y. Medical Journal*.]

Leprosy is a disease of the human tissues due to the action of the leper bacillus, which in many ways resembles the tubercle bacillus familiar to all in consumption. Though the bacillus of leprosy is generally accepted as the cause of leprosy, the conditions under which it attacks and develops is unknown. Experience and observation are opposed to the theory that it is inherited. Healthy children are born of leprous parents and if separated from them are not attacked by the disease. Dr. Alvarez of the Leper Board of Sandwich Islands reports a leprous man, whose wife and fourteen children by her, were all healthy.

The generally accepted theory of contagion, on coming in contact with lepers has some unusual exceptions, as for instance a washwoman in Hawaii washed leper clothing for years, having two husbands who died of leprosy, and yet she was not affected.

There are two chief forms of leprosy as known at the present time. The tubercular form infects through the skin or mucous surfaces. It may be months or years in developing and then suddenly appear as red-brown patches on face, hands or feet, accompanied by fever, rheumatic pains and general weakness.

Later nodules or bumps are found along the arms, legs, face, forehead, which later open as running sores, that refuse to heal, and the average life after that is less than ten years.

The anesthetic or painless form of leprosy attacks by paralysis of the nerves to the face, arm, or leg, followed by a withering of the muscles nourished by those nerves. Then the fingers, toes or even the entire limb may gradually decay and fall away, joint at a time. The hands may be drawn like a bird's claw and be-

come useless. The average life in this form is less than twenty years.

Sometimes the same person has both the tubercular and the anesthetic forms and it is then called a mixed form of leprosy.

Some cases seem to heal spontaneously or remain without getting any worse, but so far there is no known cure. Electricity, medicines, antitoxins or serums are all alike impotent to cure, though much can be done to relieve the suffering of these unfortunates.

The only real cure is prevention, and to this end the complete isolation of all cases seems to be the proper thing. So far as can be learned, the first leper came to this country following the French and Indian Wars, and settled in Louisiana. By 1786 there were so many lepers begging in the streets of New Orleans, the authorities rounded up about forty and isolated them on a high strip of land surrounded by swamps, just west of the city. In fifteen years the lepers had all died or escaped and the place was desolated.

Almost a hundred years later at New Orleans there were eighty cases admitted to one hospital in one year as charity cases. Then the authorities were stirred to action again, and in 1880 a leper colony was formed at Iberville, eighty miles above New Orleans on the east bank of the Mississippi. This settlement contains fifteen acres enclosed by a high fence.

There are now thirty-two lepers in the colony, only seven of them negroes, though negroes are more often afflicted than whites. The theory is that there are over two hundred lepers at large in Louisiana alone, though the law says all must be confined.

At this colony the identity of all inmates is kept a secret. They are not permitted to marry, and are in charge of four Sisters of Charity who have volunteered for this service. The patients are well cared for, life is easy and they spend their time in reading and in helping others less able to do than themselves.

This is the only leper colony in the United States.

Congress appointed a Leper Commission of Investigation March 2, 1899, whose report is our most reliable information at the present time. Owing to the loathsome nature of the disease, and the lack of government preparation to care for such cases, it was impossible for the commission to discover all the leprosy cases in this country.

They obtained information of nearly three hundred cases, three-fourths of whom were at liberty, thus endangering the public health. One-half of this list were American born, and infected here in the United States.

Distributed among States, Louisiana 155, California 24, Florida 24, Minnesota 20, North Dakota 16, New York 7, other States less or none.

Iceland has a leper hospital with over one hundred cases which have gradually *decreased by immigration* to the United States and Canada.

Minnesota and North and South Dakota have already become a mecca for Icelandic lepers, and the authorities lately deported a number who were trying to enter. Manitoba also has a number who have come from Iceland.

The history of leprosy is indeed interesting in so far as we can learn of it. Prof. Paul Haupt considers the writings of the ancients referring to leprosy to include under that name many skin diseases not now called leprosy.

The word translated leprosy in Leviticus XIII no doubt included much more than we now include in the term. The *Talmud* tells us Pharaoh (Rameses IV) died of leprosy and was not buried in the tomb of the Pyramids for fear of defilement.

Leprosy was probably a very common disease among the Israelites when they left Egypt, as Egypt is considered by some to be the original source from which this disease came. King Azariah (2 Kings 15:5) died a leper. Herodotus spoke of leprosy in Persia. Pliny implies that Pompey's army returning from Syria brought leprosy into Greece and Italy. The disease afterward appeared in the Roman colonies of Spain, Gaul and Britain.

In the seventh century, Rothar, king of Lombard, made laws regulating the marriage of lepers. So also did Pepin and Charlemagne. Leper houses existed in the seventh century at Verdun, Metz and Maestricht. In the eighth century at St. Gall. In the eleventh century at Canterbury.

During the Crusades (1096-1271), leprosy became an epidemic in Europe, attacking royalty and many of the best families. At this time Matthew Paris estimates 19,000 leper houses, 2,000 in France alone. Many in England, Ireland and Scotland.

In 1392 Robert Bruce, king of Scotland, died a leper. Holbein, the great German artist, painted at Augsburg

in 1516, St. Elizabeth giving bread to a group of lepers.

A leper house was founded at Edinburgh as late as 1591. Leprosy occurs occasionally almost everywhere, and is present at many places all the time and statistics are showing an alarming increase in this disease at the present time. It is impossible to give figures as to the number at present but it is estimated at nearly a million cases.

The Federal Government should have absolute control of all cases, and it is to be hoped that Congress in the near future will pass the bill, which has already been presented twice, and authorize the construction of a National Hospital for lepers, where all cases may be sent and humanely cared for during the years allotted unto them to live. Especially is this true since we have annexed the Philippines and Hawaiian Islands, and have thereby direct contact with thousands of lepers.

So long as we are in ignorance of the real character of the spread of the disease, it is doubly essential to the welfare of the public to prevent as far as possible the spread of so loathsome and incurable a disease.

Cedar Rapids, Iowa.

CHILDREN'S QUARRELS.

ONE of the saddest experiences that can come to any aged mother is to see her children separated by family quarrels. It seems an almost impossible thing to the young mother, gazing so tenderly at her little brood. To think that the babies who are nursed at one breast, cradled in the same loving arms, brought up under one roof, whose memories are stored with the same images, should, in later years turn, one from the other, in irreconcilable differences and anger. It seems incredible to the mother of little children that such things can come to pass; but many a white-haired woman tastes of the bitter cup, and is powerless to restore love.

Oh, the sadness of it! Oh, the lost happiness! The lost love and help and joy!

For there is no one like our own flesh and blood when the family is what it should be. The bond of sympathy in past experiences makes adult companionship between brothers and sisters one of the best things on earth. No other friendship can be so beautiful. Even the love of husband and wife cannot make up for the lost love of kith and kin.

So with all the earnestness of my soul, I beg you, mothers of growing families, to consider harmony essential to home life. Do not pass lightly over your children's quarrels, bickerings and trivial disputes. They are learning to use the weapons which will mean death to true family life. Every quarrel between children is serious.

Make up your mind before the birth of your second child if possible, if not, now, there shall be no quarrel-

ing in your home. That earnest determination is half the battle.

Remember that each child of your family had the right to freedom from interference by the rest. Do not let one child take toys from another, nor dictate what he shall do. Have no tyrant, and don't be a tyrant yourself. Consider before you interfere with your child's freedom, and be sure you are doing it for his safety and good, and not to save yourself annoyance and trouble.

Supply yourself with plenty of stories culled by fiction, history and experience, which shall impress on the children the dreadful results which often follow quarrels and differences, trivial at first.

More than once have I called an angry group to me, saying, "Hark! I want to tell you a story!" Then I have earnestly related the story of some quarrel and the misery and wickedness following in its train. As the children listened, they grew quiet, their passions cooled and they left me with subdued manner and hanging heads to quarrel no more. You will not need to make any personal applications or reference. If not overdone, this is the best method I know of, to cure the habit.

Children often quarrel over the home work. Some mothers dislike to ask work of the children, leaving it for them to volunteer their services, especially as they grow older.

This never works well. If the mother fails to exert authority and fairly apportion the work, the children are sure to each try to see that the others do their fair share, and this leads to many angry disputes. The mother should definitely define the duties of each member of her family, at the same time having it clearly understood that they are subject to special orders from her at any time.

Disapprove practical jokes. During the adolescent period these are often considered, by boys especially, a most attractive outlet for wit. Instead, they are usually either vulgar or cruel. Teasing when it is genuine is a form of unkindness which should be frowned upon.

Every family of growing children should be made familiar with the fable of the old man who taught his sons the value of family unity by a bunch of faggots. When tied together, he was powerless to break them; while each single fagot was easily broken.

Make them realize that whatever is to a brother's credit is, in a measure, to their credit too, and vice versa. A child who will go out among his playmates and tell of the wrongdoing of a brother or sister should be smartly punished. Teach him never, under any circumstances, to talk to an outsider about family shortcomings. It is better that he should be brought up not to discuss family peculiarities, even at home.

Send away any person who, coming under your roof,

tries to provoke a quarrel. Sacrifice the most valuable servant, offend your neighbors by sending their children home, even deny the shelter of your roof to a relative, if necessary to preserve the peace and home love.

Children will learn wonderful self-control if they see the parents exercising it. Here religion will do wonders for the high-tempered child, who may be taught to repeat silently some simple prayer, as, "Lord, keep thou the door of my lips," when the angry retort is about to be made; and a little thought of another's kindness will still the desire for retaliation. Teach the boys not to fight, unless it be in the defense of right and the protection of some one weaker than themselves.

The children who disagree should be separated. They will soon be only too glad to play harmoniously once more. Many little children can be shamed out of quarrels.

Each child should have his own toys, and then be taught generosity to others. Older children should have each his own clothes, toilet articles, books and other personal belongings, and "borrowing" without permission be considered a grave offense.

Some mothers have all the toys held in common, saying it is easier than settling disputes when the children complain of each other, and that the other method makes them selfish. I think not.

The home is the place where children should be taught to respect the rights of property. It may save you family disgrace when the child is grown.

Lastly, bring them up to feel that a friend is far too valuable a possession to be lost through the gossip of a third person. Girls are often over-sensitive and silly about this. If mothers would talk to them sensibly, they would learn to find out the facts from their friend and be able to judge more wisely. Boys are usually frank in these matters, but refined, sensitive girls will often lose a friend whom God meant to be a lifelong comfort and help to them, rather than overcome their wounded pride.—*American Motherhood*.

FATHERING A BOY.

THE crying want of the age is good fathers. Not fathers who will toil night and day in order to amass a competence for their children, but fathers who will give themselves to their growing sons. The only boy that is safe is the boy whose saved father makes of him a confidant, a playmate and a friend. Let some one else teach the boy his multiplication tables; the Christian father must teach him how to spin his top and fly his kite and trundle his hoop. Let somebody else, if need be, teach the lad his algebra; but let no one except the father teach him how to bait a hook and build a fire and dress his first "shiner." Let some outsider teach him the Greek alphabet; but no one except his own father should teach him how to pitch a ball or

vault a pole or load a gun. The most precious opportunities of life are those offered to the parent to enter sympathetically into the life of a child by means of the pleasures that are native to youth. The busiest man in the world can far better afford to neglect his business than to neglect his boy. His most sacred duty is to keep in touch with the lad. Somebody, if not his father, will be his intimate, and so his pattern. Years ago a young man said to us, when we expostulated with him regarding his excesses, "I never knew my father. He was too busy writing sermons to give any time to me." Was it to be wondered at that the boy broke that father's heart?—*The Interior*.

"DON'TS" FROM A STOVE REPAIRER.

A FEW "don'ts," furnished by a stove dealer who is frequently called upon for repairs, may assist the novice.

Don't heat a stove rapidly the first time.

Don't pile the coal above the top of the firebox, nor allow the top of the stove to get red hot. It warps and cracks the covers.

Don't let your grate get clogged. Shake often and keep free from cinders and ashes.

Don't let ashes remain in the ash-pan. They absorb the heat, cool the oven, and check the draft.

Don't let clinkers remain fastened to the firebox. If the box is brick lined, drop an oyster shell in the fire occasionally, when burning briskly, and the shell will clean off the brick.

Don't "rush" the range with the oven draft open. You use too much fuel and burn out the range too fast.

Don't let the smoke draft stand open, except when fresh coal is put on. Heat that goes up the chimney is so much good money burned.

Don't burn wet garbage in the stove. Dry it first. Otherwise, steam is generated, and the moisture will injure the firebox.

Don't set leaky vessels or spill cold water on the range. The cold coming in contact with the heated metal will crack it.

Have the inside of the oven kept scrupulously clean. Wash the entire inside of the oven (not forgetting the roof) at least once a week. Remove the shelves and door before commencing operations, and scrape off any burned substances with an old knife. Let the oven be kept open till quite dry and all smell of soap has passed off. A brush kept for this purpose is very useful.—*Selected*.

WATER DRINKING.

FEW people recognize the medicinal value of pure water and still fewer realize the amount of water required by the body. The internal bath is as important as the external one in the preservation of health. If the busy mother will accustom herself and train her

children to the regular drinking of pure water and plenty of it, the habit will soon become a fixed one and much good result. Two glasses of water should be taken immediately upon rising, at least half an hour before breakfast, two more at eleven o'clock, again at four and also just before retiring. Water should not be taken with meals or within an hour before or after eating. It is best to establish a regular time and then keep to it. There is much difference of opinion as to whether the water thus taken should be hot or cold—either is good; experience will prove which is the better for one's own personal need. But whether it be hot or cold, drink regularly and plentifully.—*Selected*.

CHILDREN'S CORNER

VERA'S FAULT.

LILLIAN M. WIRE.

"If you do not hang up your things, Vera, I'll put them out-of-doors," mama declared one morning "There's a nice closet off from your room and it isn't much trouble to keep things in good order."

"I'll try to remember," Vera answered, but a week later the little maid was going to a picnic and dressed in a hurry. Every chair was covered with garments and I am sorry to say that some things were thrown upon the floor. Mama determined to teach her little daughter a lesson. "No room should be left in such disorder as that," Mrs. Brown thought.

The next day Vera asked: "Mama, where's my dress?"

"Out under the apple tree, dear." Vera went soberly for her dress. She never had to be reprov'd again for lack of order. Everything was put in its place.

A BOY'S MOTHER.

My mother she's so good to me,
Ef I was good as I could be,
I couldn't be as good—no, sir—
Can't any boy be good as her!

She loves me when I'm glad er sad;
She loves me when I'm good er bad;
An', what's a funniest thing, she says
She loves me when she punishes.

I don't like her to punish me—
That don't hurt—but it hurts to see
Her cryin'—then I cry; an' then
We both cry an' be good again.

She loves me when she cuts and sews
My little cloak an' Sund'y clothes;
An' when my pa comes home to tea
She loves him most as much as me.

She laughs and tells him all I said,
An' grabs me up an' pats my head,
An' I hug her an' hug my pa
An' love him purt 'nigh much as ma.

—James Whitcomb Riley, in *Poems of Childhood*.

THE QUIET HOUR

THE EARTHLY MISSION.

W. ARTHUR CABLE.

ALL things have a propagating agent. Nothing is accomplished without a series of reinforcing efforts. Necessity demands that every work carried on by humanity, whether for good or for evil, maintain allies by which the end sought for is reached.

The primary work of humanity, by far the most far-reaching and influential, is that of the saving of souls. And God, in his infinite wisdom, has ordained colleagues by which this object may be reached. Man, as clay in the hands of the potter, obeys the small, still voice within him, yields to the whisper of the infinite, and establishes, at the command of a higher Power issues by which the one primal object, the saving of souls, may be reached.

Undoubtedly the fundamental accessory is that of the missionary movement. So long as the world has been, missions are. Man was placed on earth to fulfill a divine mission. The serpent, under the commission of the satanic power, fulfilled a mighty mission for his master, in the Garden of Eden. Thence sprang a never-ceasing ministry, the redemption of humanity.

For this cause Noah, the revered sage of the ancients, is descried lifting a warning hand, sounding a pleading note, to a dying world. For this cause, the ark is seen in the mist of the evening, when night prevails in a godless world, guarding within its secure walls eight precious souls, the embassy of God. For this cause, Moses leads a chosen people to the land of promise, a land flowing with milk and honey for those who keep sacred the will of God.

The climax of the enormous enterprise is reached with the gift of the Son to save a lost world. By the spilled blood of the Sinless, the mission of salvation in direct connection with God, is ended. Every person henceforth must work out his own salvation.

It now remains for the hope-filled child to find an anchor for his purged soul in the blood of Christ. And the commission says, "Go ye"; therefore, we see the cleansed heir to salvation make his doubtful way first to the Jews and afterwards to the Gentiles, until "all nations shall know." We see Paul, as also many others, wend their footsore way amid corruption and opposition, bearing the Saving Grace wherever they

go, and sowing it broadcast, that, among good soil, it may take root and bring forth abundantly.

Again we see Luther, invincible to the fiendishness of the devil's agents, muster his strength and attain the victorship of sin. Wycliffe, Calvin, and hosts of others also take up the call. Coming down to a later period we behold Duncan, as he leaves his mercantile business and popularity behind him, and answers the voice of the Master. Frances Willard also may find worthy mention.

Increase along this line is noticeably prominent at present, and all for the sake of the "go ye" and the yearning after a sin-stained soul in the fleeing wings of destruction.

Scottville, Michigan.

THE KINGDOM OF GOD WITHIN.

THE fruits of the Spirit are but so many elements which belong to the kingdom of God in the heart. "The kingdom of God is righteousness and peace and joy in the Holy Ghost." (Rom. 14:17.) The Spirit who reveals Christ as enthroned in the heart reveals also the things of Christ, the things which pertain to this inner kingdom. Hence the presence of these heavenly graces in the believer's soul always carries with it a conscious presence of the King in the person of Jesus Christ, the risen Son of God. The believer thus favored and thus endowed with royal blessings from the hand of the King himself, may truly affirm that he is heir to a heavenly kingdom, and that he has already entered in part into the possession of his inheritance. "We which have believed do enter into rest." (Heb. 4:3).

It is very often supposed that this foretaste of heaven which is granted to the believer while still on earth, is a kind of holy rapture, and is a state of grace chiefly to be desired for its own sake. In other words, the same mistake is made in reference to the "earnest" of heaven which is generally made concerning the heavenly inheritance itself. To many, probably to most persons, heaven stands for little more than a final refuge from every form of earthly ill, and a vast realm filled with every possible form of pure delight. In like manner a mistaken impression prevails very generally concerning the manifestation of the Spirit in the heart, and the somewhat vague language in which

many speak of their own inner experiences does not a little to foster this mistake. The kingdom of God in the heart is not meat or drink, nor is it a rapturous delight without purpose, and without any special bearing upon life and character. Heaven is doubtless a sphere of ceaseless activity, and the foretaste of heaven which the Christian is permitted to enjoy on earth is a part of the discipline which is needed to prepare him for the higher and holier activities of that better world. Happiness, for its own sake, has no place in the Christian system, in either earth or heaven, and mere rapture of the soul is by no means the whole, or the chief part, of what is meant by the fruits of the Spirit revealed in the believer's heart.

So far is this from being the case, that according to the New Testament teaching, the fruits of the Spirit serve in an important degree to form a basis of character, and also add greatly to the power of their possessor as a worker in his Master's vineyard. Love is more than an emotion; it is the "bond of perfectness," the power which binds together in harmony and completeness all the virtues and graces which enter into the structure of Christian character. Peace is an element of power, and as such it both "rules" and "keeps" in the realm of personal experience. Joy is a source of strength—"The joy of the Lord is your strength." It adds also to the efficiency of the Christian worker, and hence the ancient psalmist prayed: "Restore unto me the joy of thy salvation; * * * then I will teach transgressors thy way, and sinners shall be converted unto thee." *Psa. 51: 12, 13.*) Hope is to the anxious soul in peril what an anchor is to the storm-tossed ship. Meekness is more than an inoffensive disposition; it is an element of success, and in time will hold the world in its quiet grasp. Righteousness is a royal gift, and insures its possessor of kinship with those who sit upon thrones and dispense justice with royal dignity and power. Long-suffering and gentleness and goodness—what are these but reproductions of qualities of character which belonged to the Master himself when here on earth?—*From "The Church of Pentecost."*

GOD'S JUSTICE.

WE marvel sometimes that God's justice is not promptly and signally displayed, and that those who sin are not at once destroyed. They would be if they depended on the forbearance of good men. But wicked men live and prosper, not because God is indifferent, but because he is patient, and gives them time and opportunity to forsake their evil ways. The world is full of instances to show us that divine justice, though long delayed, is at last executed. Nothing is more foolish, if we were aware of it, than to envy the prosperity of the wicked.

These difficulties will vanish in the light of the

judgment day. The enemies of the good man may try to add bitterness to his misfortune, and say: "Why does not God befriend you, and why does he not punish us?" But the end is not yet. In that day when the secrets of all hearts shall be made manifest, virtue will be rewarded and vice punished, and all men, whether saved or lost, will be forced to exclaim: "God is just! God is just!"—*The Mennonite.*

HE IS AN ISHMAELITE.

THE first step the liquor seller takes toward opening up his place is to confess that he is not to be trusted like other merchants; that what he proposes to do is beneath the dignity of a free man; that as a citizen he is to be suspected and hampered and watched; that to accommodate his output additional police and jail room will be required; that his location near a schoolhouse would be a contamination; that his location near a church would be an insult to religion; that his location in the market would be an outrage on the poor; that his word to obey the law is not good without a bond; that for the right to call himself a business man among business men he must pay heavily and come up every year like a ticket of leave man and submit himself to be checked off on the roll of dangerous citizens.

He makes his money easily, but his business pays an awful price in money and in reputation for recognition among its betters.

A general horror of the business as a corrupter of youth, a violator of the home and a fouler of the springs of civic power has fastened itself in the public consciousness.—*John G. Woolley.*

SELF is the curse of our life before regeneration and after. Before conversion it is clothed in rags; after conversion it becomes respectable and puts on a white dress; but the devil does not care whether it is clothed in one or the other, so long as we have it inside us, dominating us.—*F. B. Meyer.*

THERE is one lesson which we as Christian workers should learn, and that is this: If we would ever be worth anything in the Christian service, we must first be brought to naught, and then we can be used to the glory of God.—*N. H. Mack.*

"MELANCHTHON used to say, when he saw others possessed of wealth, 'Let them take the riches, give me the work.' To be a coworker with Christ, that should be glory enough for mortals."

"WE do not sail to glory in the salt sea of our own tears, but in the red sea of a Redeemer's blood."

ECHOES FROM EVERYWHERE

According to the statement of the Chicago & Northwestern railroad for the year ended June 30, 1909, the road carried 27,000,000 passengers without a single fatality.

The international Esperanto congress which has been in session in Barcelona, Spain, has been most successful, being attended by 1,300 delegates, representing 33 nationalities. The next congress will be held in Washington in August, 1910.

October 16 has been set apart as a national holiday in Mexico to be known as "Diaz and Taft Day." Salutes will be fired and in every town in the republic whistles will be blown at the time set for the meeting of Presidents Diaz and Taft in El Paso, Tex.

Hereafter the police ambulances of Chicago, instead of carrying first-class brandy as a "first aid," will carry spirits of ammonia. Chief Steward has found that the brandy intended for victims of accidents was being consumed by men in charge of the ambulance wagons.

Persons in the far western States are backward in applying for positions in the census bureau. Examinations are to be held on October 23 and so far the West is far behind in the apportionment. There are 3,000 positions to be given out, the appointments being from six months to two years.

French smokers are counted on to furnish an additional \$13,000,000 to their government by a ruling just made by the minister of finance that beginning next year all government-made cigars now selling for more than 2 cents shall have 1 cent added and that cigarettes shall undergo a like increase.

With building and equipment valued at \$100,000 the Seeger Indian training school has been offered to the State of Oklahoma through Prof. J. H. Connell, president of the State Agricultural and Mechanical College at Stillwater. It is proposed to have the school operated as a secondary agricultural college. Three sections of land belong to the school and the buildings are of stone and brick.

One of the car lines in New York City which has adopted the pay-as-you-enter style of cars has been worried for some time by the fact that many people drop into the fare box Canadian coins and sometimes bad money. In order to overcome this, the company has secured a box to which is attached a crank, which, when turned, promptly ejects any coin but the right ones. Thus when the conductor sees a suspicious fare dropped into the box, he turns the crank, and if the coin comes out, he hands it to the passenger with the request for the right sort of fare. The box is expected to save the company a great deal of loss and trouble.

During the past fiscal year 2,067 aliens were rejected as would-be-citizens. This is a material increase over the number denied citizenship the previous year. On the ground that he is not a white person within the meaning of the statutes the government will next month oppose the naturalization of a Turk.

The Australians are getting more thrifty, and are trying a plan to turn their rabbit plague to account by marketing the rabbits as meat on the London market. The other day the White Star steamer Runic brought to England 600,000 of the little live animals, in 26,000 crates, and if the Briton shows a liking for Australian rabbit stew, regular shipments will follow.

Germany, it will be remembered, has a small tract of treaty territory in China, Kiauchau, on the Yellow Sea. With the usual German thoroughness she is setting a pattern there in modern development. A technical college has been established there for Chinese students, and in one of the departments German textbooks and other works are translated into Chinese for the use of the students.

James Bryce, British ambassador to the United States, has accepted the invitation to come to St. Louis October 25 and accompany Taft on his river trip to New Orleans. Further, according to a letter received by the secretary of the Lakes-to-the-Gulf Deep Waterway Association, Ambassador Bryce has suggested to his own nation that a British war vessel be sent to New Orleans to greet Taft on his arrival there.

Prof. Percival Lowell has noted at his Flagstaff Observatory that the antarctic canals of Mars are disappearing. This waning of the much-discussed canals seems to be a well-recognized phenomenon. Long ago Prof. Pickering suggested that we see not really the canals, but rather the vegetation which fringes their banks. The waxing of the canals in spring and summer and their waning in autumn and winter is not unreasonably attributed to the growth and decay of this vegetation.

The Pennsylvania Railway is planning to set out more than 1,000,000 trees. This will make a total of 3,430,000 trees planted in the last three years to provide for some of the company's future requirements in timber and sleepers. This constitutes the largest forestry plan yet undertaken by any private corporation. Heretofore the company's forestry operations have been confined to a limited area between Philadelphia and Altoona. This year, however, 65,000 trees are being set out on tracts of land near Metuchen and New Brunswick, N. J. In addition there are to be planted within the next month 207,000 trees near Conewago, Pa., 186,000 in the vicinity of Van Dyke, 334,000 at Lewistown Junction, 7,000 at Pomeroy, and 205,000 at Denholm.

A Mexican newspaper clipping forwarded by Consul-General Arnold Shanklin tells of the proposed railway which plans to run Pullman cars from Seattle to Panama. It is to be part of the Southern Pacific railway system, which is now being pushed on to Guadalajara, and a concession has been secured for a line from Acapulco to Salina Cruz, the Pacific port terminal of the Tehuantepec Railway.

The old Bland "cartwheel" dollars bear the initial "M." of their designer, Morgan, in two places; our dimes, quarters and half-dollars bear the initial "B." of Mr. Barber, chief engraver of the mint, though it takes a strong magnifying glass to find it; our gold quarter and half eagles bear all three initials of Bela L. Pratt, the artist who designed them; the \$20 gold pieces issued from 1849 to 1907 bore the initials of their designer, "J. B. L."

The 13-cent stamp, by many considered to be unlucky, has been doomed, and will soon be no more on sale by the postoffices of the country. It was devised to cover the cost of the 8-cent registry and the 5-cent international postage rate. However, when the registry fee is raised from 8 to 10 cents on Nov. 1, the 15-cent stamp will be used. Instead of the 13-cent stamp there will be issued a 12-cent design, which will cover the cost of the new 10-cent registry fee and the 2-cent postage rate in the United States and for England and Germany.

Mahmoud or Mahomet V, the new Emperor, is a much more liberal and popular monarch than his deposed brother Abdul Hamid. Instead of cooping himself up in the Yildiz palace and never showing himself, Mahmoud goes about everywhere, greeting the people and freely consulting with them, somewhat after the patriarchal manner of the Caliph Haroun el Raschid in the Arabian Nights. He is traveling in different parts of his dominions to observe the state of things, and his course is doing much to encourage confidence and order among the people.

So much counterfeit paper money has lately been set afloat in Italy that no one will now take paper money if he can get any other. The postoffices are refusing to take currency and demanding gold. It seems that even the very officials of King Victor Emmanuel's court were lately paid off in bad currency, for the counterfeiters have become so expert that they even deceived the Bank of Italy. The industry seems to be an international one, as considerable quantities of counterfeit United States bills of Italian origin were recently captured in New York.

Scientists soon will have placed at their disposal for use the highest meteorological and astronomical observatory on the American continent. It is situated on the top of Mount Whitney, Cal., 14,000 feet above the sea level. Realizing the value for effective and progressive astronomical and meteorological work of an observatory far above the clouds and free from the dust and smoke, near great cities the Smithsonian Institution decided to build a suitable laboratory on Mount Whitney. It is a small three-room stone structure, but it has been difficult to build as all the materials have had to be taken to the great height on pack mules over narrow rocky trails, but the work is nearly completed. When the observatory is opened it will be used by scientists of the Smithsonian Institution to make observations. The Smithsonian Institution will permit the building to be used by all scientists gratuitously.

Dr. Carle Gregor, a nerve specialist from Basle, states that in children of drunkards, seventeen per cent are mentally diseased or tubercular, while in children of non-alcoholic users, less than six per cent are thus afflicted.

The dread disease, pellagra, new to this country but common to Italy, is increasing at an alarming rate in North Carolina. There are said to be 1,000 cases in the State, and every county, except one, has one or more patients.

The German printers and publishers of picture postal cards already are beginning to feel the effect of the new American tariff law. Heretofore they controlled this industry, and even the illustrations of American views were "made in Germany" and shipped to American dealers. All is changed now, and the art printers of Berlin, Leipzig and Munich are seeking other channels for a large part of their productions. It is a hard blow for the German postal card industry.

The Vatican authorities report a heavy falling off in the receipts of "Peter's pence"—owing to the hard times prevailing in most parts of the world, and special economies have been undertaken by Pope Pius X himself and all about him. "Peter's pence" is a small offering made by Catholics throughout the world for the use of the Pope at Rome; in England under the Catholic monarchs it was collected by the crown on St. Peter's day as a regular annual tax of one penny on each household, but in the time of Henry VIII it was abolished as a tax and it is now everywhere a voluntary tribute. The Catholics of the United States are the most liberal contributors to the Peter's pence fund.

Quite a protest has gone up because the Australian government has given the contract for all the machinery for an army gun factory to Pratt & Whitney, an American firm, instead of placing the order in England. The response made by the government is that the American machinery is all made on the interchangeable-part system, so that a given piece will fit all machines equally well, whereas European machinery is still generally made on the old hand-made system, in which each part is specially fitted to each machine and may not fit any other. Moreover, the officials state, the American machinery is so efficient that it can turn out about twice as many guns as the English. A gang of American workmen will go to Australia to set the plant up and teach the Australians how to operate it.

MARDI GRAS IN CALIFORNIA.

Gasper de Portola was sent by the rulers of Spain to explore the western part of America. He reached the peninsula and from the heights of Pilpar Point discovered San Francisco bay, Oct. 19, 1769. He was afterwards first Governor of California.

In his honor a week of celebration will be held beginning Oct. 19, at San Francisco, which will resemble the Mardi Gras. During the week the city invites all the world to visit it. Guests from foreign lands and from the eastern and southern States will be welcomed to the metropolis, which has been so lately reconstructed at the Golden Gate. It will be known as the Portola Festival. Work will be postponed and the week will be devoted to pastime and merry making.—Maud Hawkins.

Among the Magazines

UNWRITTEN LAW.

Lynch law is the mother of the unwritten law. The two live together in the house of lawlessness and dine at the same table. Both are social outcasts, but they seem quite able on occasions to force their way into respectable society. This is particularly true at times of great excitement and in localities where hot blood and cool heads are in constant struggle for supremacy.

One of the latest evidences of the baneful effect of mob law upon a community comes from Clarksville, Miss., where a negro was lynched because his brother had killed a policeman. In justification of the mob's violence, it is alleged that the murdered negro was suspected of having provided his brother with a mule on which to escape his pursuers. This fact, however, has not been established and probably never will be. But even if it were true, it would fall far short of justifying murder. It is significant, moreover, that this excuse was not offered until the day following the lynching. The first reports said that members of the mob told their victim as they hanged him that "It's all in the game, anyway." One is inclined to accept this as the truth of the matter. The mob was on a lynching bent and when it failed to find the real culprit, that individual having been arrested by the sheriff and hastened to the State capital for safe-keeping, attention was turned to the slayer's brother. If it was not "all in the game," it was at least "all in the family" and doubtless the lynchers believe that they ought to have a set of special medals for having rid the community of some of its bad blood.

This incident serves to show to what length the lynch law carries its advocates. They know no reason and in their madness they fail to understand that they are doing themselves, their community and their State a much graver wrong than is done by the man whose life they take. They strike at the very cornerstone of government and at the foundation on which justice stands. They outrage decency as never was woman outraged. They pave the way for lawlessness, and put themselves in a class below the murderer, for they cannot even plead justification. They succeed merely in robbing the law and not at all in creating respect for prohibitory statutes. And this, whether they go alone to avenge the ruining of a home or sally forth as cowards do, in herds, to spill blood in assaulted virtue's name.—Woman's National Daily.

PARTY LINES AND THE TARIFF.

Citizens who take politics seriously are drawing comparisons as to the way various senators and members in congress voted on the tariff. Some of the newspapers are making out terrible cases against those legislators who voted against revision downward, and especially those who, as they put it, answered, "me, too" to every proposition that Senator Aldrich favored. You must not, however,

give too much weight to what the newspapers say, for even editors and publishers are human. It leaks out that what appeared to be a reduction of the duty on print paper is really not going to operate as any material reduction—and naturally the newspapers are sore. No one can be expected to approve of a tariff that does not benefit himself; what does the private citizen care for the good of the country at large. The tariff is a selfish question and will always be determined on selfish lines, unless we can put it into the control of a non-partisan commission which has divine powers.

Among the insurgent Republican senators, Senator La Follette of Wisconsin holds the record, since he voted only 18 times with his party on the tariff schedules and 106 times against it. Bristow of Kansas comes next, with 27 votes for the majority program and 101 against. Clapp of Minnesota, Cummins and Dolliver of Iowa, and Nelson of Minnesota follow in order in the degree of their insurgency. Gore, the blind senator from Oklahoma, leads among the Democratic senators in irreconcilable opposition to the protective policy, as he voted 118 times against the schedules and only five times for them. Bacon of Georgia, Fletcher of Florida, and Overman of North Carolina followed him in order.

On the other hand, several Democratic senators were better Republicans, judging by their tariff votes, than the insurgent Republicans were. McNery of Louisiana voted 66 times with the enemy and only 25 times against; Foster of Louisiana voted 29 times with the enemy; Martin of Virginia 18 times. Chamberlain of Oregon, the Democrat who was elected by Republican votes, showed his broadness as a representative of all the people by siding 16 times with Aldrich, and Simmons of North Carolina, Taliaferro of Florida, and Daniel of Virginia each voted for the "robber tariff" 14 times. The only strictly loyal Republicans were Aldrich of Rhode Island, Smoot of Utah, Kean of New Jersey, and Flint of California, for they alone supported the program through thick and thin.

Analysis of the vote in Senate and House shows that the tariff has practically ceased to be a party question, if it ever was one. General Hancock was to a certain extent correct when he said it was a local question—but more than that, it is really a personal and selfish one. The Democrat whose constituents are interested in lumber, rice, sugar, iron, etc., believes in a protective tariff—on those things—while the Republican whose constituency is howling for cheaper articles of consumption believes in reduced duties. They say nothing is settled till it is settled right, but the tariff is one of those matters that never can be settled right, as it involves too many conflicting interests. It is of necessity a compromise; no tariff law has ever entirely suited any one individual, but unless free government is a failure we must conclude that every such law represents in a rough way at least the average of the majority sentiment of the country. The tariff is a working basis, a *modus vivendi* merely.—The Pathfinder.

CANDY BY THE TON.

Nowadays the only way to make candy at a profit is to turn it out at the rate of several tons an hour—so we are told by Horace C. Baker writing on "Candy-Making on a Large Scale" in the *American Exporter* (New York). In the last few years, Mr. Baker tells us, candy-makers have made a great advance in their output through the elimination of handling. The candy-makers of this country have been operating in small isolated plants, but this is rapidly changing, and now there are many factories that can, with comparative ease, turn out more than 50 tons a day each. This has been accomplished through the installation of modern labor-saving machinery for doing the work by what is known as continuous process. We read:

"The modern candy plant reflects throughout the attempt of the manufacturer to eliminate the handling of both the raw materials and the partly finished product as it passes through its various stages of development. As is well known, the chief constituents of candy are glucose, or corn sirup, and the ordinary refined white sugar. The glucose is installed at the bottom of the factory in large tanks, from which it is pumped to a big receiving-tank at the top of the factory. Close beside it is another large tank, into which the barrels of white sugar are emptied and are reduced to what is known as simple sirup by means of water. From these tanks pipes lead to all the mixing-kettles in the factory. . . .

"On the top floor of the building are situated many of the mixing-kettles. These kettles, which are used for the making of gumwork, marshmallows, creamwork, etc., are hemispherical, steam-jacketed copper containers, with a set of paddles on the inside revolving at the rate of about fifty times a minute. Into this the materials are drawn from the pipes just above the kettles, and the heat is turned on, allowing the materials to cook. The kettles have a capacity of about 2,000 pounds each, and a battery of six or seven of them can be attended to by three men. When sufficiently cooked a gate in the bottom of the kettle is opened and the hot mass allowed to flow down a pipe to a vat in the top of the machine for molding the candy. Into a rectangular frame is massed together a quantity of unbleached cornstarch. This is compressed into a fairly solid mass, and on top of it is placed a board with a number of dies. These dies are made of plaster of Paris and are formed in the shape of the candy to be made. This process is very similar to that of the molding of the patterns in sand for the casting of pig iron. There are from thirty to forty patterns to a mold. When the patterns are sufficiently impressed into the cornstarch the mold starts forward an endless chain into the filling-machine. These molds are fed into the machine continuously. Leading from the vat are a number of small pipes, each terminating in an automatic cut-off. The small gates at the bottom of the pipes allow sufficient of the fluid candy to drip into the molds to fill them, when it is automatically shut off and another mold replaces the filled ones. . . . After drying sufficiently the candy is taken to a machine, which shakes out the mold, leaving the cornstarch and the candy in a heap. Over this is passed a blast of air, which removes the cornstarch, which allows the candy to drop down into an inclined trough-like receptacle, the bottom of which is a series of brushes."

In the case of what is called "panwork," after the candies are formed they are taken to revolving copper kettles, set at about 30 degrees from the horizontal. The moving kettles keep the candy tumbling about, and from time to time a coating material is thrown against the sides from a brush. This gives the candy its smooth-coated

appearance. Caramels and similar candies, after boiling, are run upon large marble slabs, and after cooling are cut into strips and again into squares. Sometimes, after the cutting into strips, these are fed into a machine by which they are automatically cut into the desired blocks or squares. In wrapping caramels and nougat, a machine automatically places the paper around the candy, folds it, and delivers the complete wrapped candy down a small chute upon the packing-table. To quote again:

"In the manufacture of chocolate-covered candies the most interesting process is that of coating the candies. . . . Fluid chocolate is placed in a large vat under the dipping-machine. In this vat there is a rocking-device which keeps the fluid chocolate moving continuously. At the back of the machine are a number of wire screens, each mesh of which is large enough to hold one candy, it being held in position by the wire under the mesh, being bent down to form a slight depression. Into these depressions the candies are sprinkled by hand and the screen placed in the machine. The machine receives the screen, drops it into the vat, where it is agitated sufficiently to give the candy the desired coat of chocolate, after which it automatically rises and is thrown out to the front of the machine, where it is inverted by the operator on a sheet of oil paper. When it is laid on the paper it is slightly agitated by the machinery and the chocolates drop out, the screen returning to the back of the machine. . . .

"The success of a modern candy factory depends almost wholly on the ability of the candy manufacturer to make, so far as it is possible, a continuous process. Not only is the demand in the United States enormous, but the export business is showing rapid strides from year to year."—*Literary Digest*.

A TOWN RUN BY WOMEN.

IN these days of discussions of suffragist movements, women's rights and feminine business acumen, any one in search of an example of an unusual sort will be much interested in learning something about Cancale, a French channel port of some fifteen thousand souls when they are all at home, and which is truly a woman-run town.

There is no woman mayor, no woman in the town council. The offices are left as a mere matter of form to the men, who are seldom there to fill them, but the women are a law unto themselves; they make up the whole town, transact all the business, police the place, maintain order and strict sanitary conditions, manage the schools, and at the same time carry on the most famous oyster industry of France, doing the entire cultivating and selling and transporting the product of the ocean beds, even loading and unloading the sea-going ships that come and go at the port.

And what is still more interesting to their sisters in other parts of the world the girls of Cancale are the first to be married of all the girls of north and central France. Ask a French sailor where of all ports—excepting of course out of chivalry his own native town—the most beautiful of French fisher girls are to be found and he will tell you at Cancale. You will believe him too when you walk along the quays and the

narrow streets and see the pretty faces and neat trim figures set off to the best advantage in the Breton dress and clean white caps, or watch the little groups in the shade of the street in the afternoon or within the deep set stone doorways mending nets and gossiping.

The conditions that make this a woman-run town came about in the most natural way in the world. All the men are fishers and they spend the greater part of the year at sea. They are good sailors and they man the craft that venture across the Atlantic to the French fishing grounds along the Newfoundland coast. It was their rights that used to come up frequently for adjustment by fishery commissions, and it is the loss of their vessels that almost every year brings sorrow to Cancale and the neighboring coast.

When the men do return they find that the town has been managed so well in their absence and the thrift of the women has been so well exercised that they are content not to meddle and to let things go on as they have been going. It is the uncertainty as to the fate of the men, the fear that at any time they may be thrown helpless and homeless upon their own resources, that makes the women of Cancale self-reliant and leads them early to seek some means of their own for an honest livelihood.

For the men that remain in the town the women do not seem to entertain the greatest respect. Most of them have become incapacitated for work or are shiftless and idle. So the women run matters themselves.

Cancale's little stone houses, gray with age and the mists and fogs of the sea, face the harbor like the back drop of an opera setting, and at night the broad roadway and the stone embankment, early deserted by its tired and hard working population, takes on the appearance of a stage.

The rule of the women police apparently is not severe. The most important rules of the community appear to be those established by custom. One of these is that once a week during the summer everybody takes a dip in the ocean.

Certain days are set apart for different sets and they never fail to take advantage of the opportunity. Cancale itself has no beach, and so you will see every afternoon the women in groups arm in arm going along the shore to the foot of the cliff, where great boulders form a sort of natural shelter from curious eyes and where the pebbly beach slopes gradually out to sea.

The thrift that the conditions referred to inspire is something of a passion among the women. It seems that there is a constant struggle with each one of them to make more money than the man who goes to sea. They frequently accomplish this too, for the returning fisherman finds frequently that his yearly gain of one hundred and fifty or two hundred dollars after a hard

battle from the sea is more than equalled by the patient and careful housewife that he left at home.

But oysters made Cancale famous and they constitute the principal industry in which the women are engaged. There is always so much to be done in summer in the beds, or the parks, as they are called, that there is work for many women during the whole year.

The parks lie around the sea front and with their rough fences and piles of granite resemble nothing so much as water-soaked fields at low tide. It is a wonderful sight to see the hundreds of women hurrying in from the beds keeping just in advance of the rapidly inflowing tide.

It is weird, too, to see them, three or four hundred of them, loading the big oyster carrying vessels. They crawl over the sides like ants. It is a hustling business, working against the tide and carrying through slime and mud great baskets that men would not handle with more ease or swiftness.

Several sturdy women with badges and sticks keep the workers in line, preventing disorder and settling difficulties.

It is said that the police are very useful and very vigilant. A theft has never occurred in the town.—*Exchange.*

ACCURACY, THEN SPEED.

YOUNG men and women who study stenography and typewriting, are, as a rule, always anxious to acquire speed. This is, indeed, a worthy ambition, as the very object for which the study is pursued is to fit the pupil to save time for those who may avail themselves of his services. But the first accomplishment the student should seek is, not speed, but accuracy; for inaccurate speed is of little, if any, value. He who strives for speed first will never, in all probability, become careful, painstaking, and accurate, and therefore will never become a thorough master of his chosen work, and will be but little sought after by employers.

First, acquire accuracy, which is, in fact, one phase of honesty, and then bend every energy to acquire speed. This is the only kind of speed that possesses either moral or commercial value.

What is true of the would-be stenographer is true of all people, in all the walks of life. The only wise course is to seek quality first, and quantity afterwards.—*Selected.*

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

FOR SALE—One set of 31 vols., Encyclopedia Britannica with Revised American Supplement. Late Edition. (New.) Publishers' price, \$120.00. My price with case, \$75.00 f. o. b. Girard.—Luther Petry, Girard, Ala.

Syracuse, Ind., June 1, 1909.

Mr. James Glass, Big Timber, Montana.

Dear Sir: I arrived home day before yesterday, after a most pleasant and instructive visit to your Montana proposition.

I have been on the lands and investigated the irrigation system of Glass Brothers Land Company, and am convinced that the essentials of a very prosperous community are there, namely, plenty of water, rich soil and much sunshine; and I would say that the fine appearance and phenomenal yields of domestic fruit orchards in the vicinity of your lands, which have no spraying or other care given them, lead me to believe that commercial orchards of great value may be grown on your lands; and I would not hesitate to plant quite liberal of the hardier apples, cherries, plums and pears, and smaller fruits in the berry line.

Because of these conditions I hope and expect to be one of the number to possess these goodly lands.

(Signed) EDWARD DEETER.

Mr. Deeter is a noted horticulturist of northern Indiana and is a son of Elder Deeter of the Church of the Brethren.

Real Art Mottoes

These "Real Art." cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

SPECIAL TERMS TO AGENTS ON REQUEST

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

AN OPPORTUNITY.

There is a great field for Mission work in the Southwest generally and in New and Old Mexico particularly, and here is an opportunity for you to help in raising the necessary funds without one cent of financial sacrifice upon your part. I have an arrangement whereby half of all money sent me for weekly newspapers or monthly magazines will be turned into this fund for a Mission to the Mexicans. Send me subscriptions to any weekly or monthly periodical published in the United States at publisher's price and the subscriptions will be promptly forwarded to the publishers and half the amount of your remittance Gospel work in the great Southwest. We have a sister missionary at work now in Clovis and also need funds for pushing our mission in Old Mexico. You and your neighbors will soon be renewing your subscriptions to periodicals you take every year. By sending these subscriptions to me you are at no additional expense, but you are rendering material aid to a noble cause. Tell your friends. They will be glad to join you in this.

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.'"

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

YOUR CHOICE OF LOCATION

"Church Extension by Colonization" is our Motto. We are locating our second Colony, with others to follow in other states in the near future.

COLONY NUMBER ONE

is located in the famous San Joaquin Valley, in "Sunny Stanislaus" county, near the center of California, adjoining the new town of EMPIRE. An organized Church of the Brethren is holding regular services and Sunday school in the new colony.

This location was selected because of its fine climate; snows and thunder storms are unknown there; because of its rich soil and fine irrigation system enable a great variety of crops to be grown; and because the excellent transportation facilities to the nearby markets make it easy to dispose of the products to good advantage.

Alfalfa is cut from four to six times a year, yielding from five to ten tons of hay annually, which sells from \$10.00 to \$15.00 per ton. All kinds of stock, dairying and poultry are handled with profit. The alfalfa remains green all winter.

All kinds of California fruits, nuts, berries and truck can be grown here, yielding good incomes.

A good Dairy Cow will yield about \$120.00 annually.

WHAT OTHERS SAY

A Pennsylvanian who has lived near Empire for five years says: "I am raising alfalfa only; that which was one year old and over, yielded nine tons per acre this year. We have 90 acres in alfalfa and are preparing to seed 100 acres more."—J. M. Bombarger.

A North Dakotan feels this way: "I will frankly say that the Empire location has more good points

than any thing I ever saw, you should not have much trouble in locating people here, even if prices are a little high.

Personally I am partial to the land around Empire. After about three week's investigation I find the land almost faultless in location, soil, drainage, railroads to markets. It will stand the very closest inspection."—J. W. Deardorff.

COLONY NUMBER TWO

This colony is being located near Portage la Prairie, Manitoba, in the great wheat Belt of Canada, about sixty miles west of Winnipeg, the Chicago of Western Canada, a city of over 100,000 population.

Four trunk-line railroads pass through the section in which the colony is located, giving excellent transportation to nearby markets. The raising of stock, wheat, oats, barley and grass are the principal pursuits here. Immense crops are grown annually of these cereals, wheat yielding from 20 to 40 bushels per acre. Lands are little higher here than in the newer sections; wheat brings from 10 to 15 cents per bushel more than in the western provinces. Homeseekers will find it advantageous to investigate our colony propositions here and elsewhere. Write us for fuller information about prices, terms and special rates for homeseekers.

CALIFORNIA

What place in California? **Raisin City** of course, where you have an average of 275 days of sunshine each year. No snow storms or cyclones to disturb you. Instead of the snow, ice, etc., during winter you can grow radishes, lettuce, onions, and many other vegetables which will make you wonder why you were so foolish as to live in a cold climate, when such a beautiful country was inviting you to come there and make your home. Don't delay but investigate at once.

DOTS AND DASHES

The finest raisins your grocer carries, if he carries the best, have the brand of a Fresno packinghouse.

Those dried peaches, apricots and nectarines were grown in Fresno county, and yielded their grower from \$100 to \$300 an acre.

Sunshine, fertile soil and water. To these add thrift and energy and you have a combination that can't be beat in any other farming district in the world. Write for description folder.

Land \$25 to \$60 per acre.

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph. D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Bound in cloth, 335 pages,\$1.25

Brethren Publishing House
Elgin, Illinois

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Rare Ranch Bargain

IN ORDER TO CENTER OUR EFFORTS UPON THE DEVELOPMENT OF OUR TOWN OF MIAMI AND IRRIGATED LANDS IN MAIN PORTION OF MIAMI VALLEY, WE HAVE DECIDED TO OFFER FOR SALE OUR FAMOUS OLD RANCH HEADQUARTERS AWAY UNDER THE CURRENT PRICE OF SUCH LANDS IN THIS COUNTRY.

The ranch contains about 750 acres of fine, deep, rich agricultural land—forty acres reservoir water right from Farmers' Development Company mammoth irrigation reservoir, 20 acres alfalfa and natural hay land, about 100 acres in all under cultivation; natural hay land watered from floods and by underflow. A large portion of the balance could be placed under irrigation, but is capable of producing as good crops as any lands in the southwest through the natural rainfall. Entire tract fenced with substantial wire fences; crossed by three streams, one of which is the Rayado River. Abundance of fine water all over the tract for domestic purposes and for stock water. An ideal fancy sheep, cattle, mule or horse ranch.

Good well, large cistern, three substantial residences, large commissary house, two good stables, other out buildings and corrals.

Remember this land is a part of the famous MIAMI VALLEY, which is supplied with first-class church and school privileges, ideal climate, beautiful natural surroundings, the finest of people—in short the ranch is situated in the midst of an ideal home land.

\$11,000.00 FROM QUICK PURCHASER WILL TAKE ENTIRE TRACT WITH ALL IMPROVEMENTS, ONE-HALF CASH, BALANCE TO SUIT PURCHASER.

CATCH SPECIAL EXCURSION TO SPRINGER, NEW MEXICO, SEPTEMBER 21ST OR OCTOBER 5TH, VIA ATCHISON, TOPEKA & SANTA FE R.WY.—\$30.00 FROM CHICAGO, \$25.00 FROM KANSAS CITY, \$11.65 FROM DENVER.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre."

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 42.

THAT FIRST TERM OF SCHOOL

S. S. BLOUGH

THERE is only one first term of school for a teacher. That term is often for a long time anticipated and when it is over frequently referred to. My story begins with my last day at winter school as a pupil in Somerset County, Pa. All winter, the teacher had been encouraging me. It was generally understood in the school, in my home and in the community that another year I should try for a school. Almost the closing hour of the last day had come. The last day at the old red schoolhouse often had a tinge of sadness, and tears were frequently shed. This my last day in this association, where I had spent twelve winters of my life, brought me conflicting emotions. The teacher called on the two of us who were going out for the last time for a speech. I rose with a palpitating heart to make my first extemporaneous speech. I do not now remember what I said, but it was short and was attentively listened to.

Here is one turning point in my life. From this on I looked forward to becoming a teacher. I had an older brother teaching and as I remember it my highest ambition was to teach a country school. In a few weeks I entered a preparatory school for teachers. After nine weeks of strenuous study, the examination day came. The county superintendent must be satisfied. When in a few weeks the results were compared, I felt highly gratified, for I had made first grade and outclassed some of the old teachers.

From the school room I went to the harvest field. Harvest at home over, I was permitted to hire out for two months. In the long days of oats harvest and seeding, working from before daylight till after dark for ten dollars a month, I earned twenty dollars toward an outfit for teaching. This wage would seem rather small now for young men past eighteen years of age.

In the meantime the school election had come off. This was an important day. The school board of six men met at the village schoolhouse and received all applications for their fifteen schools. It was somewhat customary to apply for the home school and I

followed the custom. After the applications were received everyone left but the "directors," to be called by the ringing of the bell when the selections were made. Those were hours of suspense, but at last we filed in to read the names of school and teacher written on the blackboard. Sure enough, I had a school, but not the home school. Instead of this, I, a crude beginner, was to teach in a somewhat aristocratic district, the school which a few years earlier had been called the hardest in the township. I signed the contract for five months at twenty-seven dollars a month, took my report book under my arm and walked the five miles home, eagerly awaited by my younger brothers. There was some disappointment because I did not have the home school and a perfect stranger did.

With my twenty dollars previously earned, I bought a suit of clothes, watch and chain, shoes and hand bell. No broadcloth or gold watch for the prospective "professor," I assure you. Now for a boarding place. The only Brethren family in the district consented to board me. A splendid home, everything plenty and of the best, and this for five dollars a month. Of course I usually went home over Sunday. In the school election, two of the old teachers had been left out, and I felt quite fortunate, yet I was moved 'twixt hope and fear,—hope of success, fear of failure. As I look back over my twenty-three years since then, I find that I have frequently been possessed with the same feeling. After all, how often do the feelings and experiences of childhood and youth repeat themselves in our lives!

The time for the first day of school came. The program had previously been arranged after the pattern of that of one of my former teachers, amended by the suggestion of my teacher brother. This program consisted of twenty-eight periods which must be gone over each day. The time for these recitations ranged from five to twenty minutes. The school where this was not done was the exception, and the teacher who could ignore such a course of procedure was obliged to have the full confidence of his pupils and patrons. The

school hours ran from 9 A. M. to 4 P. M. with one hour for noon and fifteen minutes intermission both forenoon and afternoon. This necessitated some rapid teaching and reciting, especially since the successful teacher was expected to complete all the books each year. And woe to the teacher who could not complete the books. He was frequently branded as a second or third-rate teacher alike by scholar and patron. It even reflected upon him so strongly that his re-election was at times placed in doubt. Whether it was this crowding of program and large demand for results, or strenuous effort of teacher and child, the schools turned out scholars not to be despised, sometimes even rivaling in efficiency those of the present time.

The school enrollment for the year numbered thirty-two, ranging in age from five to nineteen and in knowledge from the beginner to the young man with a valid teacher's certificate. Four grown-up young ladies and as many grown-up young men, all of them full of life, and two at least preparing to teach, made an interesting advanced class for an inexperienced eighteen year-old beginner. I almost felt like a stranger in a strange land.

Each morning a passage of scripture was read the first thing. This was followed by the roll call. Each pupil responded "present" with varying degrees of modulation. This gave the trickster a good opportunity thus early to begin a disturbance, but thus it had been done by others.

I must not forget the apparatus. An antiquated set of outline maps strung around the room, a Pennsylvania county map of which we were somewhat proud, a blackboard with a few brushes and crayon, and a reading chart for beginners. This was all, but even this was more than some schools possessed.

It was fortunate that for several weeks the older pupils did not enroll. With a limited amount of knowledge of how others did, augmented by a diligent study of an old book on school management, we were fairly well started when the more advanced pupils came. After this we waded right into the fullest kind of work. Luckily the teacher's certificate was proof against the boys trying to stick him. My fears from this source were less than from the question of discipline. Many of the boys were anxious to play tricks, and the girls to whisper. Cupid tried to get in his work between the sexes. One family, at least, from the beginning tried to work against the teacher. One influential citizen tried to influence the directors. This was quickly reported to me, by friends, but with my strongest plea I could not persuade them to come and investigate. Of the six school directors, not one visited the school in the entire term. This may have been a sign that they trusted me perfectly. Of course one can never be sure.

The young teacher was anxious to succeed. Worry

was not always absent by any means and more than once a prayer for strength and guidance was uttered after school was dismissed.

Spring was returning, books were being completed, and an early spring called the larger pupils out to work again. This was a neighborhood of sugar camps. A few times on Saturday the teacher helped to gather the rapidly flowing sap. Then, too, there were the "stirrings off" when the young people of the neighborhood gathered to eat "spotza" and play games in the large meadow by the light of the moon. And I must not forget the spelling bee, when several schools met for a test in spelling. Here was given a kind of public test of the teacher's ability to teach spelling. The best spellers in each school were pitted against each other. Those were experiences with their redeeming features.

Finally the last day came. A few of the absent scholars, and a few visitors with the regular scholars were present. A little treat, a last farewell speech, dismissal, closing up the shutters and that was all. The report was filled out, the last pay drawn and my first year's teaching was done. I hardly knew then whether to be glad or sorry so I was both.

Viewed close at hand I could not congratulate myself much. Viewed in the light of much later experience with an unprejudiced mind, I call it success. From those boys and girls have gone out at least a half dozen teachers. I am willing to believe that even then the Lord was leading me and kept me from teaching the home school which was an easy one.

I am not sure that teaching a first term of school is a training for a young man or woman which can not be obtained in any other way. Many are the lessons which it brought me not only in later teaching, but in my higher teaching for God.

MORE ABOUT BONES.

H. A. BRANDT.

IN the INGLENOOK of Sept. 14 there appeared a short article telling of some prehistoric bones that are being dug up out near Los Angeles, California, and it is the purpose of these few paragraphs to carry the story on "Bones" one chapter farther.

Those who know the least about southern California will remember that it is an arid country where a season's rainfall often does not exceed ten or twelve inches for the year. And when the bones of animals that live only in the dense forests of the tropics are found in one of the coast valleys scientists are very naturally surprised. That southern California was once the home of the buffalo and the elephant and the now extinct saber-toothed tiger, giant sloth and even the mastodon is news to most people.

This at once suggests the question as to what

brought about the great climatic change that has made the fauna of our present-day California so different from what it was in the long ago. The remains of the animals found seem to indicate that California must certainly have undergone a striking climatic change—a change so vital indeed that the animals of those times past away at the coming of the new order, and now all that remains are the bones found out on the Rancho la Brea near Los Angeles.

The skeptical at first are inclined to say that these bones are perhaps only those of cattle that may either have lost their lives in the asphalt sink or were thrown into it after they had died on the range. They will perhaps also suggest that the precious skull of a great buffalo that was found practically entire might be that of a big California steer that roamed the range in the days when the only exports of the west were hides, horns, and tallow. But when it comes to the skulls of tigers which have been found in abundance, sometimes two or three almost touching, and the heavy bones of the great sloth, a huge herbivorous animal that perhaps weighed a ton, and the bones of elephants and another find which it is believed is the remains of a mastodon, even the most skeptical begin to think twice.

The next question that comes is as to how these bones could have been deposited in such abundance. Some will say that the animals died on the slopes of the low hills about the lake and that heavy rains washed them down and left them lodged along the lake side. Others may suggest, who are acquainted with the nature of the lake, that water-famished animals mistook the shallow pool of water that doubtless filled the asphalt sink for a real watering place and only learned differently after they had ventured too far and hopelessly mired in the treacherous asphalt. So it is said a buffalo or a great sloth may have been caught in the asphalt and a tiger coming along and seeing the helpless animal pounced in upon it and in the struggle that followed both were hopelessly mired in the sink and died together. The dying animals would furnish a feast for hungry wolves and birds of prey and many of these either killed in fights or snared in the asphalt would each contribute their quota to the dead.

Under the circumstances either theory seems plausible and in fact both may have played a part in creating this great deposit of bones. The bones are scattered and in a jumble and it is rather unusual to find even two vertebræ joined together so that whether the bones were washed down and lodged along the banks of the lake or whether a helpless animal mired in the asphalt was torn limb from limb by vicious assailants is not conclusively decided by the position of the bones.

How old are these bones? Scientists talk rather glibly about thousands and perhaps millions of years. Some will suggest that these bones just antedate the flood and that this great catastrophe is responsible for

the extinction of the great animals of long ago. One thing is sure, these bones that are being dug up are real bones and bones that lie exposed are not exactly imperishable when it comes to a matter of a few thousands of years. But you will remember that these bones are buried in asphalt and when they are dug up and broken they are found to be saturated with asphalt and in case of hollow bones even filled with a gummy asphalt. Bones stored away under such favorable conditions—for asphalt has high preserving qualities—would naturally last for a long time.

The fact that some of the bones are especially rare, the uncertainty as to their age and the conditions that led to their being deposited in such apparent abundance are some of the things that make them of special interest. Scientists can say most anything they please as to the age of these bones, however, so long as no dates turn up to contradict them and it is not likely that dates will be found on any of the bones. So while the scientists may figure their age in millions of years and assign them to whatever age they shall see fit, after all you see we common people need not get excited for it is only the oldest and most tasteless of bones that are being dug up out on the Rancho la Brea and what is of more point to the average person is the fact that a superior soup bone may still be purchased for the modest sum of twenty-five cents. The discovery of these ancient bones will have about as much practical significance in the matter of changing the prices of meat or real savory soup bones as the finding of the North Pole has had on determining weather conditions.

SEEKING TROUBLE.

MARTHA SHEPARD LIPPINCOTT.

If you go out hunting trouble
You will find it very soon.
To your mind it will be seeming
All the world is out of tune.
Lack of harmony will greet you
In most everything you hear.
Everyone except your ownself
Will be seeming somewhat queer.

You will not be realizing
That it is your state of mind
That upsets the world about you,
So such discord, you will find.
Change your thoughts to love and kindness.
Letting trouble pass away.
Then how soon you will be finding
Dawns a joyous, brighter day.

THE strenuous life is living up to the measure of our strength, but the strained life is living beyond the measure of our strength.—*Dr. Mackay.*

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXXVIII.

My memory fails me as to just where I left off in my last letter and I will begin this one at the celebrated St. George's Hospital at Bombay, where I spent fifty-two days of the greatest suffering and of the greatest enjoyment of my life. I can not improve the diary I kept at the time, which I will copy here:

"First of all, I can sympathize with the real sufferer of typhoid, or of any fever. The long, haunted nights I have known. The dreary, monotonous days, when the ghoul of fever laid his hot hand upon my brow and

spoke to crowded halls and churches (in my delirium) —crowds of people who seemed to have come to the hospital and even crawled up bodily into my bed, thousands of them. And how they did make me work. Their earnestness at my remarks, their stubborn persistency in staying long after I had finished my delirium speech, made me beg them to go home. This sea of upturned, thoughtful faces, held me for hours at a time, when one minute of such intense, highly brilliant imagery of the mind was wearing me out more than an hour on the platform when in my health. One

of my pet subjects was the bull fight in Spain and the foot-ball (fight) in America. I was comparing the two, and pleading for a reform in the bull fight. Such bursts of eloquence (!) these horrid seat-holders never heard before. Again and again I dismissed them, now politely and now with rude and vehement plainness. 'Can't you see it's killing me?' I cried,—'do go home I beg of you all, and give me a little time to rest. Please go.' But like a wretched, chattering phonograph, the audience sat there to a man, and kept me wound

kept it there for nearly two weeks, I can never forget. It was then, when my brain was all on fire and consuming itself of itself, it compelled me most unwillingly to follow it on its mad rush of pretended but loathed duty. Least able to perform the sacred fire of intellectual work, it bounded with Titanic force into all imaginable subjects and theories and reforms under the sun. Not content with the calm meditation of a few of these, it passionately discussed with all the finesse of a philosopher's argument, the most trifling, hair-split twigs on the tree of knowledge. Every night I

up and running down and wound up and running down, only to be wound up again and again, to go over again and again, all of the fine points in my argument, playing on the same old, old tune that was making me sick unto madness. At another time my mind seemed like a singing school with twenty or thirty tunes going or wanting to go at the same time; some of them following one another, politely, but closely, others dipping in from above and from below or from the side, but getting into the strain of others, and every one failing to sing through perfectly,—but one. This one I played

until it squeaked. Whether I sung or spoke, this brilliant audience of mine sat there like consolidated fool-dom. Never once did any of them applaud me with a laugh or a clap of the hands, so as to give me a time for breathing and resting. They were too intent.

"And this now gives me an insight into the exact condition of a real fever patient. In four days I slept eight hours. . . . Plague was breaking out around the hospital. Eighty to one hundred and twenty-five deaths a day was the record. I was afraid I would take it, for I was so weak. My food during the fever was small cups of buffalo milk. On the twelfth day of convalescence I was given egg custard, the best tasting, most supremely delicious thing I ever tasted. On the thirteenth day I got custard and beef tea, the tea very weak; the custard was given once, the tea twice. On the fourteenth day a small bowl of finely-crumbed bread and milk. How good that was. It was a hundred times better than a dish of ice cream to a well man. The bread in the milk was not over a big spoonful. On the same day I had another meal of weak beef tea and custard. At three, more bread and milk, and at five, more beef tea. Then some more custard. After this they gave me a poached egg, while between times I received a pint and half pint of milk, from day to day. Seventeen days after the fever I had bread and butter. The bread had all the crust carefully pared off. Minced boiled fish, boiled potatoes and tapioca followed in a day or so. Then I learned to walk again, almost the same as at first,—leaning on two servants and then holding to the bed, then with crutches, and at last a man again. Oh, it is so good to be well. Health is the best thing in the world.

A little later I with others strolled about the palm-set gardens, over the pebbly paths strewn with sea shells that had been washed up on the beach from Malabar Coast. We wore here our simple hospital pajamas, white and odd looking, making a picture to the visitors strolling in here like that of ghostland and fairyland mixed.

"Visitors occasionally came to see me, doing me great good. Some of them forgot that I was weak and looked into my eyes too hard, drawing from me strength I should have kept for myself. They should let their eyes fall around carelessly when calling on a patient, for being above them, standing or sitting, the patient, weak and lying down, is at a decided disadvantage, and as we all like to be able to look people in the face, it is wrong for a visitor to put a patient to

this work. He should come into the room, not on tip-toe, but naturally, as if to help the patient and not to steal his pocketbook or stab him. He should appear weak, slow, deliberate, not arguing with the patient or with others. He should leave in the patient's mind some idea of strength, inspiration or joy. The mind suggestion is stronger than medicine or even of good care."

On the 12th of February the nurse stopped taking my temperature, and by this I knew I was out of grave danger. But at this time my physical condition seemed to me to be worse than during the time I was under the brazen hot hand of the fever. The sinking sensation that never left me made me feel as if I was surely slipping away from the earth and the people and being swallowed up in darkness below me.

In helpless agony of threatened collapse I battled, day after day, for breath and strength and comfort. No longer could I bear the weight of my hand upon any part of my body. My lungs were good but the walls defending them seemed so heavy they were falling down and crushing their tissue. In summary, my temperature ranged between eight and a half degrees. I took one hundred and twenty grains of quinine in four days, and after that two other medicines, with the quinine, in small doses until leaving the hospital. The gently-moving nurses, faultlessly dressed in white, starched goods, in high-heeled shoes of white moleskin, acted as a part of my cure. The eye needs medicine as well as the stomach, and the medicine given the eye by these pretty nurses was not *bitter*.

During almost every day of illness except the first few days, I read almost constantly. Strange that they allowed me to do so because of the possible harm to my eyesight. Blaikie's "Personal Life of David Livingstone" and Westcott's "Revelations After the Resurrection," were most inspiring. I also found new and deeper joy in reading Paul's letters, and in fact, everything from the Bible. The Psalms were clearer than ever before. This was a part of the revolution effected in me,—an insight, by faith, into the Holy Book, such as I could never have received from ordinary human effort. For six weeks I could not kneel by my bed at night, but when once out of the hospital bed, I resumed this important program to a Christian's daily life.

In the jungle, where the water was bad, I was able to subsist upon the milk of the cocoanut, brought down

Hindu bringing cocoanuts down from 80-foot tree for Mr. Spickler, miles from civilization.

for me from very tall trees, none of which had any branches on their tapering trunks until at the very top. Natives ran up and down these trees with as much agility as squirrels, for they had chopped into the trunks of them niches for steps. The Hindu who favored me in the picture had to fight a pretty stiff battle with the crows at the top of the tree. He was just about to crawl through the intricate circle of branches just like those seen in the tree near by, when hundreds of crows, with strangely shrieking voices, and with even bigger mouths and more terrible looking bills, than our own crows, set up a war cry and rushed down upon him, picking at his head. But he went right on, yelling at them in Hindoo, and striking at them with his sickle which you can see him carrying with him down the tree. Like almost all country natives, he was all but naked. The bunch of cocoanuts was rather too green, but the milk from several of them was excellent, and as fast as he cut them open I would drink the pure fluid from the natural cup they made for me.

With the twenty dollars saved from my hospital expenses I hurried back to Bulsar and Nausauri, and again heard the angel-like singing of the native converts of W. B. Stover and Daniel Forney. It was like heaven to be with them again, and when I walked one day down the road past the mission cemetery, and I caught a glimpse of the several gravestones, I said, "No, you didn't!" And I was glad I was alive.

AUTUMN DAYS.

T. H. FERNALD.

IN this climate there are times throughout the whole year—times in every season—when nature is at its best and puts forth every effort to produce perfect days, but with autumn—our Indian summer—the climax is generally reached.

While each season deprives us of some comforts and pleasures, yet it gives us some which the others do not.

Winter, when the thermometer hangs about zero, and the earth is covered with a mantle of beautiful snow, has its indoor and outdoor pleasures. During

the long winter evenings when the merry sleigh-bells jingle, the family beside the cozy fire become more intimate, and seem to have more love one toward another as they gather about the family hearth.

Spring, when death gives place to life, and everything awakens from its long sleep of winter; the streams again starting down the hillside; the brook giving out its musical sound; the land all clothed in verdure; the fruit trees covered with blossoms, and the birds singing sweetly and merrily in the wood, everything rejoices with new life.

Summer is the time for the fruit. The earth gives forth food for man and beast. Everything is at its best, that tends to our well-being. Then is the vacation to the country, the outing by lake, river, or in the wood or the mountains.

Then autumn. It is at this time that the efforts

of spring and summer are fully realized, and the barns and storehouses are full from the harvest. Autumn is the season of general ingathering and thanksgiving. It brings with it a feeling of sadness in view of departed summer days, yet the scenery in its beautiful tints more than offsets this sadness. The many gorgeous colored leaves of the woods and mountains call from us wonder and admiration as we behold their beauty. The songs of the birds seem more

While I "took" the potter at the wheel, the villagers, naked and otherwise, pressed around in my circle of vision. A moment ago this pot on the wheel was a lump of soggy mud. In an instant he sent the wheel whirling, while his fingers shaped it into a beautiful and useful vessel.

beautiful than ever as they fall upon our ears. The fruit is gathered—the apples, pears, etc. Then there are the merry voices of the young people as they gather the fallen nuts, the dropping of which is music to our ears. There are also the squirrels who scamper over the ground and among the trees searching for their supply of nuts for winter. On all sides are we greeted with the beautiful goldenrod and other fall flowers.

In October, our Indian summer, autumn, is at its best. The sun shines with a calm serenity—with hardly a cloud to mar the beauty of the heavens—not to be seen at any other time in the year. Nature is in these days at its best, and we are tempted to shout for joy, or remove our hats in reverence. Autumn days are like dear friends about to leave us—we cannot see enough of them. We would keep them with us, to enjoy their calm, superb grandeur. The beautiful scenery of this season of the year is food for our

minds, and the sunshine and pure air are health for our bodies. Mrs. Sarah M. Kimball has given us this beautiful pen picture of Indian summer:

Behold the earth today,
Lapped in the glory of autumn time,
Robed in its bright array,
Crimson and gold, russet and pearly rime!

Now comes the afterglow,
Like sunset splendors flushing orient skies,
While lightly from below
Soft floating folds of gauzy mists arise.

Yea, earth is beautiful
In vestments dyed so exquisitely fair;

Grateful the pensive lull
Of voices late upon the ambient air.

The cheery notes are still
Of harvest so gaily ringing here,
And low, sweet anthems fill
With slumberous melody the attent ear.

Dear is the soft caress
Of light winds warm from sunny south-lands now,
Lifting the auburn trees
In playful coquetry from Nature's brow.

The gladsome spring is past,
And the full beauty of the summertime;—
O Year! to thee, at last,
Hath come the golden glory of thy prime!

SIGHTS IN AND AROUND NIAGARA GORGE

DALLAS B. KIRK

SUMMER excursions are the order of the day and the traveler who has made a journey to Niagara Falls and as a side trip did not take the opportunity of going over "The Niagara Belt Line" has missed one of the most scenic trips in the world.

Buying a ticket costing \$1.00 (for a journey of fourteen miles) at the ticket office on Falls Street, the tourist has in his possession a piece of paper entitling him, either to a continuous ride on a trolley car east two hours, or he can make use of all the stop-over privileges called for on the ticket and consume one-half or even a whole day in making the trip; the cars run fifteen minutes apart.

Boarding an electric car designated "Niagara Belt Line" on Falls St., it soon comes to the large suspension bridge a short distance from the falls. At the entrance of this bridge the car must stop because the United States customhouse is here on the bank of Niagara River. A custom officer counts the passengers and while he is making a note of this the car moves slowly across this large steel structure so that all the passengers can get a good view of the falls, and the little "Maid of the Mist" on her trips to and from Horseshoe Falls.

The American Falls are only a few hundred feet from this bridge, and a splendid view can be had from the roomy observation car which soon comes to the Canadian side.

Just previous to entering "His Majesty's dominion" a Canadian house of custom is another sign for the car to stop, which the motorman does before leaving the bridge. Again the passengers are counted and the car is allowed to go on into Canada the "Land of the Maple."

The track now bends toward the left and on the right the tourist can see the buildings of the Ontario Power Co., and a large dominion bank.

A beautiful well-kept park lies also on the right. It was named in honor of the English Queen Victoria.

On a clear day a beautiful rainbow may be seen close to the Horseshoe Falls.

Here you can get a good view of Goat Island, in the distance, also the American Falls, Rock of Ages and the Three Sister Islands; all of these can be visited when you are on the American side.

Entrance to the Gorge.

At the brink of Horseshoe Falls is Fable Rock. Here the car goes around the loop and at this point a nice view of the upper Canadian rapids can be had just above Horseshoe Falls.

This being the first stop-over, you can stroll through the park to your heart's content, admiring the beautiful flowers, trees and other objects of interest to those who like to see nature at her best.

Before leaving Victoria Park let us get a good parting glance at the respective falls.

The surplus water from the great lakes creates the

Niagara River at Buffalo (which lies to the southward), this at last forming the upper rapids which have a descent of sixty feet to the mile. This restless torrent is broken by Goat Island, which is one thousand feet wide and a small American island called Lund; this great body of water now plunges over the precipice into the abyss below.

The American Falls are about one hundred sixty-four feet in height while the Canadian Horseshoe Falls are about one hundred fifty-four feet high; the width of the falls, including the Horseshoe, is four thousand seven hundred and fifty feet. The descent of the water from the verge of the cataract to Lake Ontario is two hundred fifty-four feet.

At last you will turn away in solemn admiration of this wonderful handiwork of the Divine Creator, repeating half aloud this line from the poet, "Earth with her thousand voices praises God."

Now boarding another car you find yourself carried

Whirlpool Rapids as Seen from the Cars.

toward the Whirlpool Rapids, past two large steel suspension bridges about two miles from the falls.

At this place you can go down to the water's edge if you so desire.

Again taking a car you pass the large, "Fairview Fruit Farm," with a great variety of fruit almost within reach, and come to Queenstown Heights.

You will want to visit the monument here which is two hundred feet high. It stands on a plateau and has a commanding view of the surrounding country. It was erected to the memory of Sir Isaac Brock, an English general who lost his life near here during the war of 1812-14.

Again on your journey you see within a few feet of the track a cenotaph which was erected in 1860 by the Prince of Wales, now King of England, while on a visit to Canada. This stone marks the spot where General Brock fell.

Now you come in sight of a steamer lying at anchor in the harbor at Lewiston.

Close by the Lewiston suspension bridge stands the customhouse. The Canadian official inspects the car

load of passengers and going on across the bridge we bid adieu to Canada.

Entering the town of Lewiston, having a population of a little over seven hundred, you can again stop, look around and wait for another car.

The return trip starts from this point, and instead of the track being built at the top of the gorge, like the Canadian line, it lies close to the edge of the water nearly all the way, the track winding in and out to suit the contour of the river bank.

We must pause at the Devil's Hole. Niagara's frontier history tells us that a company of soldiers along with a British caravan were ambushed and massacred by some Indians in 1763, they being driven over the cliff and meeting their death on the rocks below.

At close range is the Whirlpool Rapids with their restless foaming and churning—a wonder to every one; you are held almost spellbound in admiration of this striking feature of nature.

It is generally accepted that the tossing of this water is caused by the rising of the water which went over the precipice above.

The traveler now finds the car moving upward along an easy ascent past the Niagara Power and Mfg. Co. and the great railway bridge, and leaving a natural stone formation in the rear, you are once more in the city of Niagara Falls with its twenty-six thousand five hundred and sixty people.

Getting off the car at Terminal Station, which is within sight of the Administration building and Prospect Park on Riverway, each traveler should remember Franklin for making this easy and delightful excursion possible in so short a time.

Pentz, Pa.

CLEON AND I.

Cleon hath a million acres,
Ne'er a one have I;
Cleon dwelleth in a palace,
In a cottage I;
Cleon hath a dozen fortunes,
Not a penny I;
Yet the poorer of the twain is
Cleon, and not I.

Cleon, true, possesseth acres,
But the landscape I;
Half the charms to me it yieldeth
Money cannot buy;
Cleon harbors sloth and dulness,
Freshening vigor I;
He in velvet, I in fustian,
Richer man am I.

Cleon is a slave to grandeur,
Free as thought am I;
Cleon fees a score of doctors,
Need of none have I;
Wealth-surrounded, care-environed,
Cleon fears to die;
Death may come, he'll find me ready—
Happier man am I.

Cleon sees no charm in nature,
 In a daisy I;
 Cleon hears no anthems ringing
 In the sea and sky;
 Nature sings to me forever,
 Earnest listener I;
 State for state, with all attendants,
 Who would change? Not I.

—Charles Mackay.

Among the Schools

A DISPATCH FROM MARYLAND COLLEGIATE INSTITUTE.

JOHN E. DOTTERER.

SEPTEMBER 7, 1909, the eleventh session of Maryland Collegiate Institute began. The opening address was delivered by Prof. W. I. T. Hoover, who has this year taken the chair of Philosophy and History of this institution. In his address the great need of college-trained men and women, to fill all important vocations in life, was strongly emphasized.

The enrollment at the beginning of fall term this session is very large, as compared with that of former years. Many more are expected to enter later in the term. The students are well distributed among the various departments of instruction.

The majority of students are pursuing either of the two College Preparatory courses. Quite a large number have enrolled in the Normal Department, intending to prepare themselves directly for the pedagogical field of labor. There are now six pursuing the full College Course. Also a number of academic students are taking some work from the College Department. Although this department of instruction was introduced only one year ago, nevertheless, it now gives great promises for a wonderful future.

The Philosophy Class is now engaged in the study of logic. The general course was introduced by a series of lectures from our instructor, on the "Philosophical Disciplines." Thus far special attention has been devoted to the syllogism, logical terms, logical definitions and division.

The class in College History is now studying an expanded treatise of "The Eastern Nations and Greece." It is by no means our aim to adhere to the text alone; but all other works, dealing with the subject at hand, are consulted, the reports of these investigations being made in class. Thus far we have covered the study of Egypt, Babylonia, Assyria, and Chaldea.

We have a class studying American Institutions. In this course stress is laid upon all institutions of our beloved country; namely, the social, political, religious, etc., special emphasis, however, being laid upon the political.

The Surveying Class has been doing principally field-work. Considerable attention has been devoted to the work of adjusting the instruments, reading angles by means of verniers, using the stadia rod in measuring distances, and establishing the true meridian by means of the stars, Polaris and Mizar.

The scientific department is progressing admirably. New apparatus has been added and now the equipment is up to date in every particular. In Physics we have selected a course which will prove ample for the better class of schools. An unusual amount of information is based upon facts of daily experience, introduced as illustrations and applications of physical principles.

In Botany we aim to make the laboratory studies as strictly inductive as possible. Simplicity is attained by combining Zoölogy and Botany. Our method is intended to guide the student to see development from a lower to a higher order, but only to emphasize "evolution" in so far as it is safe and sound with theism.

In chemistry the student becomes acquainted with the principles of inorganic Chemistry and discovers facts concerning the principal elements and their important compounds.

The music department has begun its work with brightest prospects. Our pianos are kept busy from early morn until late at night. The vocal department lacks no interest, the number in the chorus class far surpassing that of last year. Several students' recitals will be given during the year.

Our lecture board has recently contracted with the Brockway Bureau for a splendid course of entertainments during the winter. This course will consist of two lectures, two musicals, and one reading. Among the lecturers will be the famous Dr. John Merritt Driver of Chicago.

Although only one month of this session with us is now a thing of the past, however, the zeal and ardor, with which the students have taken up their respective duties gives us sufficient reasons to anticipate great things during the year. We believe that the most prosperous year, yet enjoyed by this institution, is now before us. No efforts will be spared to elevate the standard of our work to the highest mark attainable.

Union Bridge, Md.

SOME of us mortals spend a deal of time in trying to prove to the world at large that our way of doing things is the right way, and, indeed, the only way, which shows that we have ceased to be docile. Sad is the condition of that teacher who has become Sir Oracle.—*Ohio Educational Monthly.*

NATURE STUDIES

SEEDS ON THEIR TRAVELS.

MRS. M. E. S. CHARLES.

THE work of a plant is not completed with having borne and matured its seeds, but like a wise and loving parent it takes care to place its children advantageously in life and protect them as far as possible from coming dangers.

The thistle, milkweed, and dandelion provide their seeds with little tufts of down which fly before the lightest breeze and in autumn gales must travel fast and far. The seeds of maple, elm and ash, of the trumpet-creeper, and of the pine tree are made buoyant with papery, outspread wings. These winged and tufted seeds are found only in fruits that split open at maturity. They are produced by a great number of plants, and every puff of autumn wind carries along a mixed company of such tiny travelers.

By means of little claws and hooks some weeds are enabled to cling tenaciously to the hair of cattle and dogs, the wool of sheep, and the clothing of persons. When we pick the burrs from our clothing, we are probably some distance from where they grew. We throw them into fresh soil, thus aiding nature's plans, and distributing the weed still wider.

The garden balsam has still another scheme for putting her children out upon the world. At the slightest touch the ripe seed-vessel curls up elastically, shooting the seeds away in all directions. The squirting cucumber, when ripe, shoots, as from a syringe, streams of juice mingled with seeds. The jimson weed is a native of Asia and was introduced into this country by the gypsies who use the seeds as a medicine.

The peaches, which make such a wealth of beautiful color on the tree and on the fruiterer's stall, may have been brought a long distance for the sake of the luscious flesh around the seed. Peaches have thus traveled all the way from Persia, where the family originated. Oranges, limes, lemons, apples, pears, etc., are carried all over the country in the same way.

Rose-hips, the fruits of bitter-sweet and mountain ash, and all the pretty shining berries which bead the autumn hedgerows, are gotten up to attract the attention of the birds with a view to getting their seeds sown. Birds often seem to search for the hard, indigestible seeds of such fruits as grapes, raspberries, strawberries, asparagus, etc. It appears that small

seeds can traverse the alimentary canal without alteration. When the birds are migratory they often carry these seeds great distances.

In all the modes of seed distribution already mentioned, nature assists. They are, as it were, regular modes of vegetable travel. Besides these, there are a number of curious accidental ways by which a species may be spread over a wide area. Seeds may be contained in the little balls of earth which often cling to the legs of birds. Darwin is said to have raised eighty-two plants from one ball of dry mud which had clung to the leg of a partridge. Nuts growing near river banks may fall into the water, float out to sea, and be washed up by currents on other shores. The cocoa, and cashew nuts, and the seeds of the mahogany tree, are known to have made long voyages in this way. Seeds have also floated long distances lodged in the crevices of driftwood.

Seeds also travel far by the unconscious agency of man. They may be brought over seas in the clothing, among the bedding, or clinging to the tools of emigrants. Some of our most troublesome weeds are from Europe, and may have effected an entrance into this country in these ways; or perhaps their seeds got mixed with those of vegetables and grains shipped into this country. Ballast heaps near seaport towns are favorite hunting grounds for botanists, and in these spots introduced plants are often found. At the edge of the river Lez, near Montpellier in France, American wools are cleaned before they are sold to the cloth-makers. Seeds of American plants which have been carried in these fleeces have sprung up in the country surrounding Montpellier; so that botanists have found, in this small place in South France, many flowers belonging to the landscapes of this country, Mexico and Buenos Ayres.

Seeds may be carried from place to place mixed with the earth used in making roads or railway embankments. Wherever a certain sort of gravel has been used in making repairs on the Cincinnati, Hamilton and Dayton road, the neighborhood of the track is decked each spring with a pretty spurred violet which is not native to the surrounding woods and meadows.

Movements of armies are apt to have the result, unthought of by commanders-in-chief, of spreading plants. Some new species were introduced by the Ger-

mans into France, and several kinds, notably the scarlet poppy, were brought by the Roman invaders into Britain.

New plants are apt to enter a country, as human immigrants do, by the railroad. Seeds may be raised by the wind the train makes in passing, and may then cling to the platforms of cars. They may be mingled with the litter on the floors of freight and cattle cars, and reach the ground when the cars are cleaned. This is why new flower faces smile provokingly at us as we see them from the window of a rushing train.

Near Seal Rock, California, there is a point of land covered with peculiar ancient cedar trees. It is claimed that they are the only ones of this variety in the United States. It is surmised that the seeds from which these trees sprang came from Japan where this variety of cedar is found. They floated across the ocean many hundreds of miles years ago, propelled by the prevailing westerly winds, and were washed ashore at this point, where they took root and grew.

Some plants, like some birds, seem to like people and are never found far from human homes. Burdock, nettles, and the despised purslane are social in their tastes, and only cling to us more closely for all the merciless beheading and uprooting they get at our hands and hoes. The plantain is called by the Indians, "The print of the white man's foot," and follows the Caucasian race around the world.

ORIGIN OF BIRD NAMES.

OUR English names of birds, many of them, at least, have an unsuspected ancestry, exhibiting interesting changes through past years, romantic as well as historical.

The word "owl" (or, as it was formerly, *ule*) is derived from the Latin word *ulula*—an owl. This was probably from the bird's cry, and hence is remotely related to our word howl. "Hawk" comes from the root *haf*, meaning to take or seize. "Cassowary" is from *kassuwaris*, the Malay name of these great birds. The droll-looking stork called jabiru traces his name to a South American Indian word *yabiru*, meaning to blow out with wind, which has reference to the bird's habit of distending the loose skin on the neck.

"Robin" is an old diminutive of Robert, and "parrot" stands in the same relation to the French word "Pierrot"—Peter. "Oriole" is appropriately taken from the Latin *aureolus*, meaning golden. "Mal-

lard," from male, was at first used to denote only the drake, or male, of that species of duck. "Turtle," as used in turtle-dove, is from the Latin *turtur*, the repetition being supposed to resemble the cooing of a dove. "Quail," through many and various spellings, can be traced to *quackel* and other forms, derived from the note of the bird.

As far back as legends reach, "swallow," with various spellings, signifies the long-winged bird which we know so well. "Sparrow" comes from the root of "spurn," meaning to kick or quiver; why we know not.

"Pigeon" (to which widgeon is related) is from the Latin *pipio*, a young chirping bird. "Dove" is obscure in its various spellings—*duve*, *dufa*, *due*, *dubo*—but literally means a diver, perhaps from the bobbing of the bird's head.

"Goose," *gos*, *gas*, *gans* (and Latin *anser*, has its stem also in gander and gannet. "Goshawk" is from a wrong diminutive of "goose." "Fowl" from *fugl*, *flugl*, meant originally to fly. "Duck" is literally a ducker, one who ducks or dives.

"Snipe" is from snipper or snapper—one who snaps up. "Sanderling" is a remarkable word, showing the use of two diminutives. "Crane" is from Latin *grus*, by way of *cranich*, *trana*, *garan*, *gerue*. "Jay," which in other languages is *gayo* and *gaya*, is so called from its bright plumage. "Crow" is from the same root as croak. "Raven" through *raben*, *raaf*, etc., like owl

and crow, is from the guttural cry. Some character of the plumage may suggest a title as bald eagle, pintail duck and the rough-legged hawk which has feathers instead of scales, down to its toes.—*Selected.*

The accompanying illustrations should have appeared in last week's issue with "Principles of Agriculture."—Ed.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

IN this number H. A. Brandt is adding another chapter to the wonderful bone story which he told us some time ago. The story is still wonderful and we many continue to speculate on its solution.

THROUGH an oversight on our part several illustrations intended for chapter eight of "Principles of Agriculture" failed to appear with the article. They are appearing on the Nature Study page this week.

"NEW THINGS FOR NEW BOYS."

UNDER the above heading the *Journal of Education* notes some of the features in the onward sweep of progress in the world which encircles the boys of the streets. While one finds cause for congratulation in what has been accomplished, the writer bids him not rest on these, but look forward and plan for the needs of the future. Here are several paragraphs taken from the article:

"It is easy to talk of \$30,000,000 expended for municipal playgrounds, of a Junior Republic with scores of buildings and hundreds of acres, of an elegant hundred-thousand-dollar newsboys' building, of a thousand summer camps for city boys, of social settlement houses with a clubable atmosphere, and of public school recreation centres, but few realize the significance of the statements.

"Whoever will study the ways in which great personalities have become established principles in various social, educational, and religious reforms will realize that the changes in human affairs have been nowhere more significant than in what is being done for boys in the twentieth century.

"At the Junior Republic Mr. George takes incorrigible boys and unmanageable girls, and through self-help and self-government, worked out in a genuine

village life of their own, saves them for honorable citizenship in the real republic.

"Through the juvenile court Judge Lindsey keeps boys out of jail, puts them upon their honor, follows them into their everyday life until they are trustworthy.

"Through the Newsboys' Association, Mr. Gunckel has the boys of Toledo work out their own salvation through the government of the boys, by the boys, for the boys, under skillful suggestion and superb knowledge of human nature in the growing boy.

"In the Hester-street district of New York city, Julia Richman as district superintendent has adapted the public schools to all the children of the public, until at the finish she sends into life workmen who need not be ashamed, and for whom the city has slight cause for anxiety.

"New days demand new doings. The world has no place for Rip Van Winkle. He who sleeps over-long will be more comfortable if he never awakes. The home, the church, the school, the public must think more of 1910 than of 1908. We must be ready for the new day. We must think of the rising sun when we bid adieu to the setting. We must sleep because of tomorrow's responsibility, not because of today's achievements."

Perhaps no other field of reform has been so long neglected as the one referred to in the above article, where thousands of worse than homeless children grow up in vice and sin, knowing nothing of a better life. The good work has been begun, but it is not finished and will not be while sin is in the world. There is an opportunity here for endless endeavor.

A NEW DEPARTMENT.

WITH this issue we are opening up a new department in our magazine which we believe will be of more than usual interest to many of our readers. It is characteristic of the American people that they are especially attracted by a life of activity; they admire the man who does things and they read the periodicals that chronicle his deeds. Our reading of the modern newspaper, amounting almost to a mania, is a proof of this statement.

It is for these reasons that we count upon the popularity of the new department, since it is to keep us informed on the work accomplished in a particular field in which we all have more or less interest, namely, the educational field. At the suggestion of the Educational Board we wrote to our schools some time ago proposing the plan of opening a department in the INGLENOOK in which at regular intervals we might have reports from the several schools as to the work that is being done in them and the progress our young men and women are making. It is our belief that those who are engaged in school work will be interested in hear-

ing from others who are devoting their time to the same work, and we are sure that many who have passed out of our schools into active life will be anxious to know what is now being done by those who are fitting themselves to do their share of the world's work.

We have not yet had word from all our schools, but we feel that a sufficient number have written us, promising a regular report, to justify the opening of the department. Besides the reports from the schools, we will make room also in this department for other matter concerning school work which may be sent in by any one interested in this line of work. We especially urge all our schools to unite their efforts in making this a most interesting and profitable department of our magazine and we invite all others to lend a hand in the good work.

CAN YOU AFFORD IT?

A MERCHANT of New York tells the following story: In early life I smoked six cigars a day at six and a half cents each, they averaged that. I thought to myself one day: I'll put aside the money I am consuming in cigars and all that I would consume if I kept on in the habit and I will see what it comes to by compound interest. Last July completed thirty years since, by the grace of God, I was emancipated from the filthy habit, and the savings amounted to the enormous sum of \$29,105.03 by compound interest. We lived in the city, but the children who had learned something of the enjoyments of country life from their annual visits to their grandparents longed for a home among the green fields. I found a very pleasant place in the country for sale; the cigar money now came into requisition, and I found that it amounted to a sufficient sum to purchase the place, and it is mine. I wish all American boys could see how my children enjoy their home as they watch the vessels with their white sails that course along the sound.

Now, boys, take your choice, smoking without a home, or a home without smoke; but you say, "I don't spend six and a half cents for every cigar." If you use cheap tobacco, I want to tell you why it is cheap; it is a mixture of burloey, lampblack, sawdust, colt's foot, plantation leaves, fuller's earth, lime, salt, alum and a little tobacco; can you afford to take such a mess as that between your lips? Benjamin Franklin says, "I never saw a well man in the exercise of common sense who would say that tobacco did him good."

Dr. Ferguson says, "I believe that no man who smokes tobacco before the bodily powers are developed ever makes a vigorous man. It not only injures the body, but the mind also." Dr. Prince, for a long while superintendent of the insane asylum at Northampton, Mass., says, "Fully half the patients who have come to our asylum for treatment are the victims of tobacco.

It is also the common stepping stone to the use of intoxicating beverages."

In the State prison at Auburn, New York, there were six hundred prisoners confined for crimes committed when under the influence of strong drink; five hundred of them testified that they began their intemperance by the use of tobacco.

It leads to theft; if a boy has the taste he must get the tobacco; if he has no money to buy it with, what will he do? he is tempted to steal; of the first fifteen boys who were put in a certain boys' prison ten confessed that they had stolen tobacco or the money to buy it with.

Tobacco impairs the intellect.

No user of tobacco has ever taken the first honors of Harvard.

Tobacco robs the nation of its wealth.

An eminent man says, "Put into my hands the money wasted in tobacco in the United States and I will clothe, feed and shelter all the suffering poor on this continent."

Say No! to tobacco, that poisonous weed, Say No! to all evils, they only lead to shame and sorrow. Oh, shun them, my boys!—*Selected.*

WHICH ROAD?

If you could go back to the forks of the road,
Back the long miles you have carried the load;
Back to the place where you had to decide
By this way or that through your life to abide;
Back of the grieving and back of the care,
Back to the place where the future was fair,—
If you were this day that decision to make,
O brother in sorrow! which road would you take?

Then suppose that again to the forks you went back,
After you'd trodden the other long track;
And you'd found that its promises fair
Were all a delusion that led to a snare,—
That the road you first traveled with sighs and unrest,
Though dreary and rough, was most graciously blest,
With balm for each bruise and a charm for each ache,—
O brother in sorrow! which road would you take?

—Nixon Waterman.

CALLED TO WORK.

"AWAY up among the hills of Vermont, in a little country church, was a deacon known throughout the community for his good works, his zeal and self-sacrifice. He was a man of inherited and acquired wealth, with all surroundings contributing to an easy life. He was asked one day by a visiting minister why he was pursuing a course so unusual to rich men. His reply was: 'When I became a Christian, and began to read my Bible with appreciation of its meaning, I read that I was called into the vineyard of the Lord, and I made up my mind at once that I was not called there to eat grapes, but to hoe; and I've been trying to hoe ever since.'"—*Selected.*

THE HOME WORLD

GRANNIE

ELIZABETH D. ROSENBERGER

MANY, many years ago, Grandmother Wilson was one of the objects of my childish curiosity. I was half afraid of her sharp black eyes, and still sharper tongue; she was very old and bedridden. But like a sovereign ruler of a kingdom she held to her throne and never abdicated in favor of a younger person who might have been a suitable successor. She lived in an old colonial house; there was ample room in it for two other families. Her son John and his wife, her daughter Clarissa and her husband and their children lived there.

When I went there to play with Estelle, she would say, "We must play up in the attic today because Granny says we'll get too much trash in the kitchen." And up to the attic we went. Not but that I enjoyed the attic even more than the sunny spacious kitchen; but I wondered why we had to follow Granny's beck and call. Another time it was little Ellan who could not come over to our house because Granny thought she might take cold; another time Estelle had to wear an old dress because Granny thought she might spoil her red one.

When I grew older, I learned that Granny ruled the two families from the eldest to the youngest in like manner. Her son asked her in which field to put his wheat, when to sell his corn, even the hired man had to meet with her approval. Her daughter cleaned house and made preserves when Granny said so. Granny's will was law and her dominion extended over them all. The hired man irreverently but plainly stated the case when he said, "Granny bosses the ranch."

Dickens tells us of a mother who domineered her child's home until friends referred to her as the Old Soldier. She gave advice, and interfered until there was trouble. And when the Old Soldier was blamed for her share in the matter, she said, "And this is a specimen of the thanks one gets for taking care of one's family! I wish I was a Turk." Then answered a friend, "I wish you were with all my heart—and in your native country!" Which sounds rather cruel.

but she had almost caused the separation of husband and wife. There certainly is a great difference in the personalities of old people as well as young people. Some dear old grandmothers are so quiet and meek that they are seldom seen and never heard; we unconsciously feel sorry for them and long to protect them from trouble. Others, like the Old Soldier, rush into the thick of family affairs and never have a doubt of their ability to run even the United States Government, if they had a chance.

One dear grandmother said: "My children are lovely to me when I am a visitor; I am petted and made much of, everything possible is done for my comfort."

"Don't you see things that are not as they should be when you are in your children's homes?" asked one, who was not so welcome as a visitor.

"Yes, I do," answered grandmother, "but I never find fault with them because they are doing just as well as ever they can; and I don't know but that they are doing better than I used to do, at their age; and so I just encourage them the best I can." No wonder she was welcome and you will agree that her encouragement did more good than criticism would have done.

Is there another side to this question? Yes, and a sad one. "My children do not treat me with the least consideration or respect," complained a tired, careworn mother to her sister.

"Strange, isn't it?" queried her sister. "Now I have no trouble on that score."

"Well, how do you manage? I know now since I come to think of it that your son George is especially thoughtful of your comfort."

Her sister smilingly replied: "It is not management, it is simply doing right; and you may not like my referring to it, but you do not treat our mother with the consideration she deserves. For this once I have the floor and I am going to speak out. When the children are sick, you always send for mother; she

does the work that you could afford to hire some one else to do. When you want to go for a day's visit, you send the children all there for her to care for until it suits you to come home and send for them; in short you make a convenience of mother and why should not your children consider you in the same light? Forgive me if it hurts, I have spoken the truth."

But the mother was not angry, she saw that she was in the wrong; she was able to hire much of the work done that she had delegated to her mother; when she became more considerate of her own mother, there was a reformation in her own household.

"Be kind unto the old, my friend;
They're worn with this world's strife,
Though bravely once perchance they fought
The stern fierce battle of life.
They taught our youthful feet to climb
Upwards life's rugged steep;
Then let us lead them gently down,
To where the weary sleep."

ONLY A WORD.

LILLIAN M. WIRE.

"AH!" said a dissipated man, "if people would only give me a kind word. If they'd do that instead of kicking me down. But they say, 'he's only a drunkard.'"

The influence of a word for good or ill, how it clings to us for the day. We rise in the morning with the best of intentions but a cross word dims the brightness of the day. Sometimes the tranquillity of the mind can not be restored for hours.

"I have seen a spirit calmer than the calmest lake,
And clear as the heavens that gazed upon it.

"But a storm had swept across it,
And its deepest depths were stirred,
Never, never more to slumber,
Only by a word."

"If ever anyone has 'stars in his crown,' it will be Mr. R—," said Dick Chilton. "I'll never forget his encouraging words and the touch of his hand upon my shoulder. I am a better man for his kindness. It has helped me to break off drinking."

So encourage the drunkard. You know not what a struggle he is making to leave off his evil ways. "We know not what's resisted."

We should be especially careful in speaking of anyone, to utter no word that would injure the character. For we know not how many times our words may be repeated or how much they may be exaggerated.

"Careless words, tho' lightly spoken
Lie sleeping 'neath the sea of Time."

Said one of old, aye, *hundreds* of years ago, "*Keep thy tongue from evil.*"

Did you ever notice, on the other hand, how the face of a friend will light up at the utterance of a kind

word? And it is so easy to speak it. *Try it, friends.*

"Sowing the seed in the fading light,
Sowing the seed in the solemn night.
Oh! what shall the harvest be?
What shall the harvest be?"

THE ATMOSPHERE OF THE HOME.

A FAMILY of our acquaintance has been plunged into the depths of grief by the death of a beloved daughter. Her fatal sickness was produced by the poisonous air engendered by an ill-constructed pipe in the dwelling. A few years ago a score of students in one of our colleges were all prostrated at the same time by the same cause; bad sewerage had poisoned the air, and they unwittingly drew in the subtle infection at every breath.

But physical health is not more susceptible to atmospheric influences than is the spiritual health of the household. It is the home atmosphere which usually determines the character of the family. Some homes are sweetened and purified by a family altar, and the cheerful affection and the pervading influences of God's Word; and the children inhale religion at every breath. The glory of New England in her best days was the Puritan home. Let any man read the beautiful description which the veteran missionary, Dr. Goodell, gave of the humble cottage—"without a carpet on one of its floors, or a lock on one of its doors"—in which he was reared by his godly father and his patient, loving mother. That prayer-consecrated home made him a missionary of Christ. Such homes have contributed the best blood to the American pulpit and the American State. The Christly atmosphere of the house penetrates into the core of character.

This subtle atmosphere of the household, which is apt either to convert to Christ, or to pervert to fashion, worldliness or open impiety, is usually created by the parents. They are chiefly responsible. It is their province either to poison or to purify. If the whole trend of the household thought and talk runs toward money-worship, or toward fashion-worship, or toward social convivialities, or in any other similar direction, it is the father and mother who give the pitch. It is exceedingly difficult to make the best preaching or Sunday-school teaching effective on character, amid such a domestic miasma. Almost as soon attempt to grow pineapples in Greenland, as to rear the plants of grace amid such godless surroundings. The parental influence goes through the house like the poison-gas from the sewer-pipe.

Dr. Horace Bushnell, in his unrivalled volume on "Christian Nurture," has pithily said that "whatever fire the parents kindle, the children are found gathering the wood." They either help as apprentices or accessories. If the mother is a scandal-monger, she will make her children tattlers and gossips and eavesdroppers. If the father begins the Lord's Day with his

huge, Sabbath-desecrating, secular newspaper, it will go through the family. If he puts a decanter on his table, the boys will be apt to hold out their glasses for a taste. That millionaire who in one part of his will bequeathed his costly winecellar to his heirs, and in another clause disinherited one poor, dissipated son for his drunkenness, revealed the secret of the poison-gas which he had let in from that cellar.

Parental ill-temper often sours the atmosphere of a home, so that both children and servants can hardly escape being snappish and irritable. How can cheerful, healthy piety breathe in the malarious air of a home saturated with irreligion? It was the wretched air of Eli's house which ruined Hophni and Phineas; it was the godly atmosphere of Hannah's home which produced a Samuel.

In short, the chief influence of Christianity is in purifying the sin-tainted atmosphere of human society. The Lord Jesus Christ never intended to take his disciples out of the world, but to keep them from being poisoned by making them purifiers.—*Theo. L. Cuyler.*

THE COLD PROCESS OF MAKING SIRUP.

THE customary way of preparing table sirup is to pour boiling water on sugar, or set a pan of water on the stove to boil, with sufficient sugar to sweeten and give body to the water. Sirup for canning is almost invariably made by one of these methods, although neither one enables the housewife to obtain a finely-flavored, clear fluid.

Sugar when put in boiling water, or in cold water that is raised to the boiling point, seems to lose its delicate flavor; the resulting sirup is frequently stained, rather faintly yellowish or bluish, according to the composition of the vessel in which it is prepared. This stain may be due to the chemical salts in the water, which are made active to color sugar by being subjected to heat; or the stain comes from the tinned or glazed material of the vessel, given off when hot, in the presence of water and sugar. It may, of course, originate from the chemical reactions set up in the water only when the water is in vessels of certain composition; and the stain may be unnoticeable when vessels of other composition are used. But where a stain in the sirup cannot be detected, there will always be found a gritty sediment in the sirup pitcher after cooling. This is due to the impurities of commercial sugar.

There is another and better method of making sirup than by the aid of heat; it is the cold process. By this simple method, the sirup resulting has a body that is of crystal purity, free from stain, and with the sediment filtered out. And what is of more importance, perhaps, to one who has a discerning palate, the sirup has a flavor superior to that produced by cooking, or by the application of heat, however moderately.

My father was a druggist and chemist of near thirty

years' practice. He began to make all his sirups very early in his career, and obtained quite a reputation among physicians in his locality for the quality of them. I have depicted his method, which makes the sirup and filters it all in one operation, using instead of the chemist's apparatus, such articles as almost any housewife can find in her kitchen, and can assemble easily.

The parts required in this home-made apparatus are a bottle of about a quart or more capacity; an Argand lamp chimney; two corks and a bit of cotton for a filter. A large-mouthed bottle, having a well-fitting cork, is preferable to a glass can or Mason jar, as the cork is already fitted to it. This cork is placed on a board or table; the circumference of the Argand chimney is marked on its upper surface, and a hole is cut through the cork, a trifle less than the mark indicates. Care must be taken to cut this hole so that the chimney will fit in it snugly; for cutting which, a sharp penknife will do, although a wood-carving chisel, having a curved cutting edge, is a better tool to use. The smaller cork is fitted within the Argand chimney, and one or more small holes are bored through it; the holes may be burned by means of a red-hot wire.

If a funnel be substituted for the Argand chimney, the large cork may be dispensed with; and if a bottle is used having a neck that will admit the Argand chimney's long cylindrical tube, but not its funnel-shaped base, no cork need be used with the chimney either; but the use of a cork is preferred, as it prevents the dust from getting in, and keeps the water in the sirup from evaporating. In use, the parts are assembled as shown in the drawing, and pure granulated sugar is poured into the chimney until the tube part is filled. Over this filtered water is poured; and the top is then covered to exclude dust.

Immediately the manufacture of sirup begins. The process must not be hurried. The rate at which the sirup drops into the bottle must be regulated by the size of the hole through the cork, also the thickness of the cotton and the density it is packed home against the cork. If the sirup is made too rapidly, it drops down diluted. By regulating the filter, the control of manufacture is assured. Filter paper of suitable texture for filtering sirups may be substituted for the cotton; a rapid filter paper and cotton would make an ideal strainer to clarify the liquid as it forms and seeks to escape.

The sirup made by filtration—as a chemist would call the process—has a taste of rock candy. By suspending threads in the sirup, crystals of sugar will grow upon them, popularly known as "rock candy." These crystals, by the way, are better than ordinary sugar to sweeten a teacup, in the opinion of some connoisseurs. As a medium in which to preserve cherries,

peaches, plums, in fact, any whole fruit, to use when serving liquors, it is immeasurably superior to "boiled" sirup. Cherries, hard-cooked and suspended in it, may be incased in solid crystals of "rock candy." With thought and ingenuity, many novelties may be devised with it as one of the ingredients.—*Scientific American*.

USES OF TURPENTINE FOR THE HOUSEWIFE.

THERE are few houses that are not familiar with some of the numerous uses of turpentine, and as its odor is clean and wholesome it has the advantage over many remedies whose odors are offensive.

Turpentine and soap will remove ink stains from muslin.

A few drops added to the water in which clothes are boiled will whiten them.

It will exterminate cockroaches if sprinkled in their haunts.

Moths will leave if it is sprinkled about as they dislike it.

Pitch, wheel grease and tar stains can be quickly removed if the spot is first covered with lard, then soaked with turpentine. Scrape off all the loose surface dirt, sponge clean with turpentine and rub gently till dry.

An excellent furniture cream is made as follows: Finely shred one ounce of beeswax, half an ounce of white wax and half an ounce of castile soap. Mix gradually with half a pint of turpentine and the same quantity of boiling rain water.

A few drops of turpentine on a woolen cloth will clean tan shoes very nicely.

Varnish and paint stains in coarse fabrics can be removed by first saturating with turpentine and then washing. Ivory knife handles, that have become yellow, can be restored to their former whiteness by rubbing with turpentine.

Clean gilt frames with a sponge moistened with turpentine.

Carpets can be cleaned and the colors restored by going over occasionally with a broom dipped into warm water in which has been added a little turpentine.

An equal mixture of turpentine and linseed oil will remove white marks on furniture caused by water.

Clean out closets and bureaus with strong turpentine water. It is a good preventive against moths.

For cramps, apply cloths wrung out of hot turpentine water.

When threatened with pneumonia, rub the lungs with turpentine and apply hot flannels.—*The House-keeper*.

APPLE JONATHAN.

PEEL and slice very thin four large or five small greening apples, place in deep pudding-dish or baking-

dish with two tablespoonfuls cold water. Make batter of one-third cupful of butter, one large cupful of granulated sugar, two eggs beaten thoroughly, two large cupfuls flour, with four teaspoonfuls good baking-powder and one teaspoonful cooking salt sifted together stirring well; then add flour. Blend the whole for five minutes, then pour over the apples, let stand five minutes before placing in oven; bake thirty minutes.—*Delineator*.

A SIMPLE remedy for removing cinders from the eye is to dip a small and perfectly clean camel's-hair brush in water and pass it over the ball of the eye. This operation requires little skill and generally removes all particles of dust instantly without danger of inflammation.

The Children's Corner

TOMMY'S APPLE LESSON.

"I DON'T see why Jamie and I may not play with Harry Barnes, father; I am sure he is not so very bad," Tommy urged. "We will try to make him better. Can't we play with him?—please, father, I don't see how he can harm us."

Without saying a word, Tommy's father took four large, fine apples, put them on a plate, and placed a badly specked apple in the center, then he set them in the cupboard. Tommy watched him closely, and wondered why; but his father only said, "Wait two weeks, Tom, and then we will see why you should not play with Harry Barnes."

Mr. Barnes always kept his word; the boy knew that he must wait two weeks. At the end of that time, Tommy again asked his father if he could play with Harry.

Again without a word, Mr. Barnes went to the cupboard and brought out the plate of apples. The good apples were bad, just like the one in the center. The boy was surprised, and his father examined each apple carefully, looking puzzled.

"Should not four apples make one bad apple good?" he asked. "I fear, Tommy," he added, "that boys and apples are somewhat alike. One evil companion will destroy four good ones. Do you see, now, why I do not want you to play with Harry Barnes?"

Tommy's face was very red. "I think I do not want to play with him now," he said manfully.—*Crusader's Monthly*.

THE QUIET HOUR

"COME UNTO ME." Matt. 11: 28.

A Sonnet.

JOSEPH D. REISH.

"Come unto me," says Christ to you and me.

"Come weary one, come heavy laden, and rest

I unto you will give my breast."

Come, though you filled with guilt and sin may be;
He did atone for all on Calvary.

"Be reconciled to God," is his request.

Come, and no more strive to his works molest.
From all your guilt and sin he'll set you free.

Come, cast at Jesus' feet your heavy load.

Come, ye who're deep in sin; no longer roam

The desert wild, far from your home and God.

Come ye that are athirst. Ye that hear, come.

Come, whosoever will, and tread the road

That leads to heav'n, the saints' eternal home.

Denbigh, N. Dak.

CONSECRATION.

RICHARD BRAUNSTEIN.

CONSECRATION is a word which religious people are fond of using, but it might be well employed by all who care to win success in life, for the secret of life is in it. It means the consecration of all energy upon a single object, by which our talents, work, and time are kept from distraction by a score of ends, and saved from dissipation and waste among numberless frivolities. There may be consecration to worldly or bad purposes, and the greed of a Shylock or the ambition of a Napoleon, absorbing their whole natures, meet with success here. "Verily I say unto you, they have their reward." And the world always renders a spontaneous and instructive admiration, even for selfish and wicked men who stake all on a venture, do their best, strain every nerve, and bring up every reserve force—exert their whole consummate genius in the determination to win their place and carry their point.

Browning, the most Christian poet of the nineteenth century, in his poem of "The Statue and the Bust" rebukes the cowardice and inefficiency even of a bad man who failed in his wicked schemes through lack of boldness and resolution. Weakness makes even badness detestable. So Browning says:

"I hear you reproach, 'but delay was best,

For their end was a crime'—Oh! a crime will do!

As well I reply, to serve for a test,

As a virtue, golden through and through."

That is, the man who is weak, hesitating and

pusillanimous when his heart is set upon the commission of evil, would be equally ineffectual should he try to do good. The vice tests him the same as the virtue would. "To be weak is to be miserable." So Browning continues:

"Let a man contend to the uttermost

For his life's set prize, be it what it will."

And again:

"And the sun I impute to each frustrate ghost

Is the unlit lamp and the ungirt loin."

And to those on the side of the virtue who might join issue with him, concerning this dangerous sounding doctrine he put the question: "How strive you?" and intimates that his fable is peculiarly for their instruction. Certainly we may learn much from the children of this world, who, in their generation, are wiser than the children of light. How eagerly in this intense age do men seek for wealth or political preferment, and their ambition, zeal, economy of time, restless, tireless energy, devotion of day and night, leaving no stone unturned, no possible means untried, which may lead to success, all form a standing rebuke to the listlessness and apathy with which some Christians seek their spiritual culture. The planning and ceaseless working day in and day out, year in and year out which many a Christian merchant properly makes for his business success, often furnishes painful contrast to his religious sluggishness. Would that we might turn all the fierce, turbulent, rushing energy of our century, sweeping on like a mighty, resistless flood, into the channels of Christian growth and activity. We are doing it measurably, but we must quicken our pace and redouble our zeal if we would keep religiously abreast of the world, whose times and tides, as never before, *wait for no man*.

Do men entertain only the consuming aim in life to glorify our Father in heaven—to realize his truth and righteousness and holiness in life? Are men seeking first the kingdom of God and his righteousness? This is consecration—to take the vow upon you; it is not necessarily an ecstasy, much less a dreamy meditation or piece of idle mysticism. It is of the will—a purpose—ambition—settled determination to subordinate all things to the supreme end of a religious conception and fulfillment of life.

And it is consistent with all proper lower objects to

be attained in life—all things that belong to our natural lives. It is not an impracticable thing, and does not necessitate our going out of the world; but takes up into its mighty sweep every other good thing and project, and deepens and enobles life by making it all culminate in the highest ideal. It is the narrowing of the stream to increase its current and force.

Consecration—utter self-committal—absolute self-surrender—is the only way of peace. It is the only way to win the respect of the world, that despises fast and loose methods.

It is always in our power to compel the world's reverence. Benedict Arnold thought to receive the homage of England for his treachery, and Wilkes Booth expected the South to hail an assassin as a hero, but both were loathed. Even the world admires faithfulness and whole-heartedness. All compromise is failure. Agnosticism paralyzes. Doubt and vacillation bring no victories. It is by what we believe, cherish, stand by, live for, die for, that we triumph. If one is to be a Christian he must *be one*. He must not mince matters and chew his words. He will awake to delusion and shame if he thinks he can be loyal and efficient and yet live an anonymous believer—timid, apologetic, fearful of confession, ashamed of his vow, half-way in his service, praying, "good Lord and good devil." We shall overcome the world only as we throw ourselves into Christian work with all the glow and fervor of youth and enthusiasm, and have pentecostal fires blazing in brain and heart.

DON'TS FOR CHRISTIANS.

1. Don't talk too much, a very common sin among even good people. Some one has said that spirituality will leak out through the tongue quicker than any other way. "Be not rash with thy mouth." He that keepeth his mouth and tongue keepeth his soul from trouble, says Solomon.

2. Don't be discouraged. "The eternal God is thy refuge." We have the promise that all things, even strange, hard, unaccountable things are working together for our good. Many of God's brightest saints, once as weak as you are, have passed through the darkest tunnels and the hottest fires, yet their lives were enriched by their experiences and the world blessed by their lives.

3. Don't look at other people's failures too much. We shall likely see plenty of them in most people, but that does not help us any. If we do not watch we will look at the difficulties till we, like Peter, will begin to sink ourselves.

4. Don't fail to contribute. If we sow sparingly, we shall reap sparingly. Many a man's nose has been kept on the grindstone because he has been robbing God. Our feelings are not the guide in the matter.

5. Don't seek worldly applause. Try to please God.

Even the world will think more of you in the end. Trying to be popular will ruin any Christian.

6. Don't think it strange if the world misunderstands and misjudges you. That is a part of the heritage of the people of God. Job's friends thought his trouble and affliction due to his great sin, and told him so. Jeremiah was put in a dungeon because of his faithfulness to God. Other examples could be given. You need make no explanations. Your friends do not need any, and your enemies wouldn't believe you; so just go on and be true to God.

7. Don't fail to testify. Do so every opportunity. It may seem like a small thing to confess Jesus before men, but he says to such that he will confess them before his Father and holy angels.

8. Don't neglect church services. "Forsake not the assembling of yourselves together." We do not think of staying away from our work when we feel a little bad, or because the weather is threatening. If we did, the most of us would soon find ourselves in debt, and out of a job.

9. Don't neglect to read the Word every day. Pray for enlightenment. Mark the passages that most interest you. Memorize them if you can. If we prefer to read newspapers instead of the Bible, there is a wrong somewhere, and if we will read prayerfully we will find out what the wrong is. Job said he esteemed the word of the Lord more than his necessary food. Jeremiah says: "Thy words were found and I did eat them," and he says they rejoiced his heart. David says: "Thy word have I hid in my heart, that I may not sin against thee." So we see that the Word will rejoice our hearts, and keep us from sinning against God—two good reasons for reading it.

10. Don't neglect prayer. Form a habit of prayer; talk to the Lord about everything. No matter how we may be pressed for time, we can do more work, and do it much easier, if we take time to pray. No Christian, no matter how gifted he may be, will ever amount to very much without continued prayer. We meet many who are willing to testify, sing, preach, but few—very few—who are willing to pray much, and everything will be a failure without it. It is the praying people who bring things to pass. Our lives will be joyless, fruitless and powerless if we undertake to live without it. That accounts for much of the deadness and powerlessness that we see among professed Christians.—*Living Water*.

I HAVE had many things in my hands, and lost them all; but whatever I have been able to place in God's hands, I still possess.—*Martin Luther*.

TRUE repentance has a double aspect, it looks upon the past with a weeping eye, and upon the future with a watchful eye.—*South*.

ECHOES FROM EVERYWHERE

To relieve distress caused by the cold weather which injured the crop the government of Guanajuato, Mexico, has telegraphed to the United States for 200,000 bushels of corn. The supply there is almost exhausted and there is much suffering.

The astronomical experts now figure that Halley's comet will be at its nearest point to the earth May 19 next, and it will probably be at its brightest about that time. Some authorities believe that the earth will pass through the comet's tail, but its head will be so far from us that we need not look for trouble.

The town of Bar Harbor, Me., has suffered so much from the automobile nuisance that an ordinance was passed entirely prohibiting autos in the streets. The rule was attacked as unconstitutional, but the highest court in Maine now holds it to be valid. Many other towns have been waiting to see the result of this test case.

Samuel Gompers, head of the American Federation of Labor, accompanied by Mrs. Gompers and their daughter, has returned from an extended tour of Europe. He is confident the time is near at hand when an international federation of labor, which will include the leading labor organizations of the world, will be formed.

Notice has been filed with the interstate commerce commission that, effective November 15, the rate on lemons will be increased 15 cents per 100 pounds. Under present rates lemons from California to eastern points are 15 cents per 100 pounds lower than rates on oranges, limes, grape fruit and other citrus fruits.

The railroads have considerable losses by thefts of coal as from coal trains in transit, as a ton or so can be taken off a car without being missed at the time. To head off this industry some of the roads are now spraying every carload of coal with whitewash, so that if any coal is taken out en route it will at once be made manifest by the black spot showing in contrast to the white.

It will be remembered that at the opening of the Alaska-Yukon Exposition at Seattle, the Great Northern Railway put on a 60-hour train from Chicago to Puget Sound. With the completion of the new Milwaukee, Chicago & St. Paul extension, the Maintenance of Way Department will bend their efforts to bringing the new track into such high-class condition as to permit of the running of high-speed through expresses from Chicago to the coast. The Milwaukee managers expect that next spring they will be in a position to offer a 54-hour schedule from Chicago to Seattle. This, coupled with the 18-hour service from New York to Chicago, will bring the time between New York and the coast down to three days.

During the past eight months more than 750,000 prairie dogs have been poisoned by J. W. Holman, the official government poisoner of these pests in the southwest. Within a few days he will secure more strychnine and start out on another poisoning tour. Holman says that during the next eight months he will poison 1,500,000 prairie dogs.

Dr. Chas. E. Page, one of the leading Boston physicians, makes the startling assertion that cutting out the appendix for appendicitis should be prohibited by law as a "criminal operation." He has kept track of the deaths from appendicitis operations and says "the list is appalling." He cites Gov. Johnson and Clyde Fitch as recent examples of victims of the "modern craze" for cutting.

The annual toy fair is now in progress in Paris. This is not held just to please the children, but more to show dealers and the public what their new toys for the holiday season are to be. Toy-making is an important industry in France and the French are having to "rise early" in order to compete with their German friends. Young America is the biggest patron of both France and Germany for toys.

Additional suits covering 3,000 tracts of land, varying from 10 to 160 acres each, will probably be brought to recover lands obtained by various means from members of the five civilized tribes. Large areas are involved in suits already brought and which have been advanced for hearing in the United States circuit court of appeals on December 6. The government contends that these lands cannot be alienated.

The postoffice department has just discontinued the famous old Star Route No. 3192, as it is called, covering the eight miles from Dodgeville to Mineral Point, Ill. Under an old rule the carrier on this route received only one cent a year salary, his real compensation being got in other ways. Each year since 1881 he has received a treasury check for one cent, and souvenir hunters have offered him as high as \$20 apiece for these rarities.

The opinion expressed in a speech by Gen. A. R. Chaffee that our army will never be got into satisfactory shape until the conscription system is adopted, is arousing much unfavorable comment. It is admitted by all that volunteers are not such effective soldiers as trained regulars; it takes many months of service to make a raw recruit worth much, as we found out in the war of 1812 and the Civil War. Our young men do not take kindly to military service, but nevertheless the system of conscription, or forcing them to serve several years of the best part of their life in the army, as required in Germany and other countries, is something which, according to the general opinion, could never be introduced here.

A whirlwind of revolution that will sweep the last vestige of monarchial rule from Spain, is the prediction of Alexander Lerroux, one of the Spanish republican leaders. Lerroux passed through Paris, hurrying to Madrid to join the councils of his compatriots. Lerroux characterized conditions in Spain as "indescribable." He dwelt at length on the suspension of constitutional guarantees throughout the Spanish provinces and said that the action as much as anything else, had created the widespread disaffection.

A Munich bacteriologist claims to have discovered why it is that cholera kills the patient it attacks, and says he has confirmed the accuracy of his theory by chemical and spectroscopic analysis. He holds that the fatal agent in Asiatic cholera is free nitrous acid, the formation of which is made possible by the action of bacilli in transforming the nitrates of food into nitrites. He holds that by this knowledge safe prophylaxis is made possible. Even though a person be actually infected, says the scientist, he can protect himself, all that is necessary being to avoid eating nitrogenous vegetables, cured meats which contain saltpeter, and drinking nitrogenous water.

A holy war—a war of extermination—has been declared against the Christians by the Mohammedan priests of Morocco with the Riff tribesmen and thousands of fanatic warriors from the interior tribes are pouring into the native camps that hedge the Spanish troops in the Melilla peninsula, according to dispatches received at Gibraltar. The belief is hourly increasing that Mulai Hafid, in his latest move against Spain, is backed by German influence. German vessels are known to have landed cargo after cargo of ammunition and arms. Adherents of Hafid have already assumed control of the campaign around Melilla. Lines of fortifications are being thrown up by Mulai Hafid's engineers who are working in the hills that skirt the Melilla peninsula, where the natives have penned up the entire Spanish force.

When President Taft returns in November Attorney General Wickersham will present a draft of his bill for the taxing and supervision of corporations. The proposed bill follows closely the recommendations of the commission made in 1900, drafted by E. W. Huffcutt of Cornell and J. F. Stimson. One of the most important features of that report was a franchise tax to be imposed upon all State corporations engaged in interstate business. The commission added this significant passage, which is now regarded by Mr. Wickersham as the most advanced declaration on the subject:

"If experience shall prove that these remedies—State antistock watering laws, etc.—fail to properly control the great corporations and combinations, it may be wise for the Congress to enact a federal incorporation law. Should such a law be enacted it would then be possible to increase the franchise tax upon State corporations engaged in interstate commerce so as to compel them to reorganize under a federal law.

"When organized under the federal law it would be possible, as has been pointed out, to apply to corporations any degree of publicity or restriction that might be authorized.

"In the meantime, the separate States should amend their corporation laws so as to require greater publicity, as outlined in our preliminary report."

According to reports made to the war department by army surgeons, impure water is often the cause of the dangerous disease pellagra. This was found to be the case at the Illinois Hospital for the Insane at Peoria, Ill., by Surgeons Joseph H. Siler and Henry J. Nichols. At the Peoria hospital attendants were discharged because it was charged they had scalded patients. The cuticle peels off as if scalded. Instead of spoiled corn causing the disease, it was bad water. Pellagra has been found in New York.

For the information of bankers and merchants of St. Louis and other cities the postoffice department calls attention to the fact that postal money orders issued in Mexico are acceptable only at approximately 50 per cent of the face value. The issuance of money orders between Mexican and American offices was inaugurated October 1. Regarding the value of the orders, the rules of the postoffice department state: "Money orders issued in the United States will be drawn in dollars and cents, in the same manner as all other orders drawn on the domestic form, but will be payable in Mexico in Mexican currency at the rate of 2 pesos for \$1, and 2 centavos for every cent. Money orders issued in Mexico will be drawn in Mexican currency and will be payable in the United States at the rate of \$1 for every 2 pesos, and 1 cent for every 2 centavos."

One of the biggest official flag factories in the world is in the Brooklyn navy yard. Between eighty and one hundred women work there all the year round making flags for the use of the United States' fighting ships. They use up about 120,000 yards of bunting a year and fashion 418 different kinds of official flags. The flags cost \$30,000 a year. When the American battleship fleet set sail for the trip around the world, new flags of all sorts were made to constitute a part of their equipment. When these ships returned home their flags had been whipped out by the breezes of many waters and 1,500 new flags were made by the women in the navy yard to replace the old ones. The flags for the battleship Connecticut, alone, made a pile of bunting sixteen feet long and six feet high. There were forty-three foreign flags in that pile. Each of them was twenty feet long and twelve feet wide. The average life of a flag is three years. The flags of foreign nations are included in the 418 kinds made in this yard.

The rule which has been put in force by the postmaster at Chicago is having the effect of breaking up many a clandestine correspondence and is interfering with a number of schemes in which the aid of the United States mail was invoked. Thousands of people in Chicago get their mail at the general delivery window, and of them the postmaster has required 3,000 women to give their true names and addresses. They had to sign cards of identification and these were placed in card indexes for reference each time the applicant for mail comes to the office. At Washington it is stated that while the postoffice department purposes to prevent, if possible, any immoral use of the mails, no requirement such as that adopted at Chicago has been issued by the department. It is assumed that the postmaster in this case is acting under the general regulations of the department, which provide that the postmaster must not deliver mails to persons who give fictitious addresses.

Among the Magazines

WHY HAVE MEN SOUGHT THE POLE?

The nations have never been so much impressed by any other geographical event as by the announcement that the North Pole has been attained. It has been a world-wide topic for the past month. The northern apex of the globe has been photographed and the men acclaimed as having unfurled their flags over it are the heroes of the day. It is a great event and the story of the conquest of the Pole will live in history; and yet not a vital human interest will be affected by it.

Times have changed. Scarcely a pulse in Europe beat faster when the Western Hemisphere was brought to light four centuries ago. News traveled at snail's pace then. Generations passed away while the New World, piecemeal, was coming into view. A century elapsed before the great fact dawned upon the minds of men that a vast redistribution of human enterprise was to be the potent sequence of a geographical discovery.

The race today wants every nook and corner of the earth to stand out in the light, both for the good we may gain from them and for the completion of our knowledge of the little planet we inhabit. Nothing less will satisfy human need and curiosity. The attainment of the Pole signifies that we can and will produce a map, some day, which will picture the whole world just as it is.

We read of this final triumph as the culmination of three centuries of striving to reach the North Pole. But the Pole was never sought, for itself, until the nineteenth century. Robert Thorne, Henry Hudson, and other old mariners searched the ice edge for openings to the north, not that they had the slightest interest in the Pole but because they imagined they might find a passage to China across it. The early whalers were concerned about the Pole only if they might find new whaling grounds there. Some of them made good northings and two or three even declared that they had been to the Pole, but their stories will not dim the luster of the present achievement. The quest of the Pole as a distinct object of geographical discovery has been known only for ninety-two years, and it began when the British Admiralty commanded Captain Buchan, with two vessels, to reach the Pacific by crossing the North Pole. The British flag ever since has been floated by most of the leaders who have struggled and agonized and died in their almost superhuman efforts to reach the coveted goal. There was more significance in Peary's dispatch that he had nailed the Stars and Stripes to the Pole than appeared on the surface.—From "The North Pole at Last," by Cyrus C. Adams, in the American Review of Reviews for October.

THE GOVERNMENT OF ALASKA.

President Taft's matter of fact way of passing over generalities and disingenuous appeals and getting down to hard facts in treating matters of government was never better shown than in what he had to say at Seattle about

the government of Alaska. Alaskans are enthusiastically petitioning the President to support legislation granting them territorial government with a full system of elections. They say that their prosperity depends on it, and no doubt some of them individually would prosper greatly under the system. The President, however, has a broader definition of prosperity than they have. He thinks that a government specially adapted to their actual conditions will aid them more in the long run, and he is not lacking in frankness in saying so.

He emphasizes first the fact that the Alaska settlements are largely made up of migratory residents. Then he speaks of the vast expanse of the territory from British Columbia to the Arctic Ocean. Next he mentions the unwisdom of letting a small population around Sitka dominate by elections all the huge outlying territory. He passes then to his own view of what is best for Alaska. He thinks that most can be accomplished by establishing some one bureau or department in Washington to which all Alaska officials must report. The head of that bureau would present the territory's interests to Congress. A local resident commission could pass local laws, but in a range less extended than has been permitted to the resident Philippines commission.

It is a pleasure to find a topic like this treated in the President's manner. His arguments for a special bureau at Washington apply as well to our other outlying territories as to Alaska, and it is to be hoped that Congress will in due time find an opportunity to systematize the whole administration of the dependent territories in some such way.—Chicago Record-Herald.

OFFICIAL INSOLENCE.

The Scot who boarded a British warship and sent word to its captain that "one of the owners" wished to see him asserted a fact which few of us have the backbone to stand up to: that the humble masses own the earth by right of having paid for it with their more or less hard-earned money. It would seem as if we, the proprietors of the ever-glorious Republic, are especially meek in regarding our "hired men," from the President down, as our masters rather than our paid servants. We allow ourselves to be browbeaten by public and quasi-public officials to an extent that amazes the foreigner. A titled Englishman recently wasted much temper in learning that an American railway conductor is allowed to be almost as autocratic as the captain of an ocean liner. Among the few "strangers in our midst" who have really succeeded in silencing a top-lofty parlor-car conductor is Max O'Rell; and he did it by bursting out with a threat to pitch him through the window, about the opening of which they disagreed.

It is not the highly placed officials, however, but the petty jacks-in-office who are the most bumptious; their belief in their own importance appears to be in direct

proportion to their specific levity. A smart young clerk in a certain suburban city hall once tried to snub and make needless trouble for a quiet, shabby, elderly man who had requested an item of information at his counter. To the young fellow's discomfiture, the old gentleman revolted so far as to free his mind somewhat as follows:

"My friend, let me ask if I am in your service, or you in mine. I'd always supposed my tax-money helped pay you and these other chaps here, to work for the city to the best of your ability. And as I'm a citizen of the city I'm one of your bosses, and I object to being treated as if I was no better than dirt; besides which, on your own account, you want to be a little mite civil, or some day you'll be hunting another job. It never struck you in just that light before, maybe, but it's so all the same."

A little plain talk of this sort, conveying a wholesome lesson, is needed much oftener than it is given. Most of us submit to domineering rather than make a fuss, being surprised, indeed, if we don't get it. If the policeman on the corner, when we ask him a direction, responds with anything better than patronizing condescension, we are absurdly grateful. We approach the box-office of a theater, or even the desk of a hotel, as supplicants, ready to cringe at the expected rudeness or rebuff. In the trolley-cars, of the large cities at least, we avoid personal intercourse with the men in charge, and look for only the curtest replies if need forces us to interrogate them.

However, there is something to be said on the other side, and if we do feel moved on occasion to put one of these high-and-haughty officials in his proper place, let us do it good-temperedly, not forgetting the hint given by a certain street-car company in its printed notice to the effect that while courtesy is to be desired from the conductor, its practice is not unbecoming in the passenger.—Frank M. Bicknell, in *October Lippincott's*.

SALT AND SMOKE UNFASHIONABLE.

Our fathers liked their butter decidedly salty and their ham well smoked—and wanted other preserved foods to give similar evidence that they had been properly cured. Recently, we are told by *The Lancet* (London), the public taste has been growing in favor of the mild-cured article, so that strong salted or smoked foods are not in evidence as they used to be and are rarely called for. This *The Lancet* considers unfortunate. It says:

"This preference for the so-called mild-cured article has undoubtedly furnished an excuse on the part of the caterers for the use of stronger antiseptics than salt or smoke, and antiseptics which are, comparatively speaking, tasteless, or at any rate, which add no special flavor to the food. The old-fashioned antiseptics, salt and smoke, are thus sharply distinguished from modern antiseptics, inasmuch as the former not only preserved food but served also as condiments. In the case, however, of certain preserved foods, although the salt may be left out, the smoke must be retained, as otherwise the food loses its individuality. The kipper, for example, is inseparable from a smoky flavor, as is also dried haddock or dried salmon. We have heard that a 'smoke essence' is employed to impart the kind of palatability associated with properly smoked food, but such practices, coupled with the use of antiseptics, would readily account for the regrettable fact that cured articles of diet are not now up to their former standard. Assuming that the mild-cured article, and as a particular example we may choose butter because it is an indispensable article of the dietary, is free

from objectionable antiseptics, it is still left more helpless against the attacks of microorganisms than were the old-fashioned cured foodstuffs. Experiments have, in fact, shown that the addition of salt to butter is a factor of great importance from the point of view, of germs. In unsalted butter the growth of microorganisms is more vigorous and continues for a longer time than is the case with salted butter. Mycelial fungi if present disappear entirely after a while in salted butter, while in fresh or unsalted butter they multiply rapidly. The quality of butter appears to be improved by a small percentage of salt, it encourages the development of a flavor which makes butter an attractive article of food, and it acts as a safeguard. Altogether there would appear to be certain valid reasons for thinking that the public preference for the mild-cured article may be an error of judgment, and there certainly is much to be said in favor of the old policy of preserving foods by salt and by smoke."—*Literary Digest*.

THE PLEASURE OF WORK.

To some, work and drudgery are synonymous terms. The only kind of work with which they are acquainted is work which they dislike. Such men are to be pitied, for the joy of work is greater than the joy of rest, and the man whose life lacks the pleasure of a work which appeals to his native instincts has missed more than he can well understand. Work, all work, probably, has certain elements of drudgery, but these are in most cases subordinate, and their unpleasantness should not be sufficient to overpower the very real pleasure that men find in the ordinary tasks of life.

Why should we call our duty a task? The very name suggests the disagreeable. A task is something from which we instinctively shrink, while our daily work should be something to which we would instinctively turn. The idea that work is a necessary evil is unnatural and absurd. The ideal which pictures a workless heaven has scant attraction for the Anglo-Saxon race. No human (nor possibly, angelic) society could long endure, without serious damage, a period of voluntary idleness. To most of us the height of bliss must ever lie largely in congenial toil. This does not mean that men should work without rest at toil which they dislike, but it does mean that a man should, if possible, choose wisely his sphere of toil, and then find in that toil his chief satisfaction.

But this is manifestly counter to much of the work-philosophy of today. Instead of this we are told that much of a man's misery comes from too much work, and the popular work-ideal seems to be one that reduces the labor to a minimum. That this would increase human happiness we do not for a moment believe. Now, we are not arguing against an eight-hour day, as that is understood in the world of labor, but we are arguing against the reasonableness of the idea that cutting off one or two hours each day from our toil will add one or two hours to our daily store of happiness. It may, if we spend those hours in more con-

genial toil, otherwise it is, in most cases, more than doubtful. True, change of work is natural, profitable, and adds to the value of life, but entire cessation from work is usually most unsatisfactory, both to the idler and to his neighbors.

And it does not do to insist that the value of our toil lies chiefly in its reward. The workman whose eye sees pay-night too large is apt to see his work too small, and in many cases he will picture heaven, if he pictures it at all, as a long pay-day unspoiled by any distasteful work-hours. The value of all true work cannot be estimated in dollars and cents, and money alone cannot cancel the debt we owe to labor.

The world owes its very progress to its workmen, and a general strike would be as near hell, probably, as this world could get. The world's workers are the world's benefactors and heroes, and they should also be its saints. The holiness of unsoiled hands is not the holiness of the Man of Nazareth. Labor is honorable, profitable, Christian, and necessary, and should be highly esteemed, and it should be accounted a privilege and it should be felt to be a joy, to do our daily work.

Only thus can we do our best work. The man who works, with his heart elsewhere and his eye on the clock, will not be apt to turn out the best work. The preacher who wishes he were a lawyer or a physician will not be apt to accomplish much with his preaching. The farmer who hates the sight of a cow, and who wishes ploughs had never been invented, might possibly make a good Lieutenant-Governor, but he will never make a good farmer. The woman who dislikes housework and hates the care of children may make a good temperance lecturer, but she will make a very poor wife. Man's best work is possible only when his heart is in it.

But sometimes the complaint is made, "I do not like my work," and this is thought to be excuse enough for very audible and long-continued grumbling in reference to that work. In regard to this it seems usually to be the case that a good workman seldom grumbles about his work. It may not be true invariably, but we believe it is true in the majority of cases, that the man who grumbles at his present work would grumble even if he were put at the work which he most desires. The man who grumbles at the plough would grumble in the pulpit, and the man who grumbles in the pulpit would grumble on the bench or in the professor's chair. Good workmen seldom grumble. The man who is really busy has no time to waste in bewailing his fate. When the shoulder is at the wheel the man forgets to find fault with fate. Of course, there are cases where men seem to be misplaced, and where the man's unfitness for his task is too patent to be denied but in very many cases the man who does not "fit in" to his present task would be found to fit in to very few others.

If we would live happily, if we would do our best work, if we would achieve what measure of success may be possible to us, we must learn to enjoy our work. It is useless, worse than useless, to take note of all its disagreeable features, for these are common to every sphere of labor, and are not to be escaped. We would rather dwell upon the pleasant aspects of our toil, and strive to forget its less agreeable features. If we be true men, possessed with any adequate vision of this world's need, we can surely summon sufficient enthusiasm to get interested in and to derive pleasure from our daily toil. Probably this is something of what Paul had in mind when he said, "Whatsoever ye do, work heartily, as unto the Lord, and not unto men."—*Christian Guardian*.

Between Whiles

Rubbing It In.—"Why do you always go out on the balcony when I begin to sing, John? Can't you bear to listen to me?"

"It isn't that, but I don't want the neighbors to think I'm a wife-beater."—*Kansas City Journal*.

Old Deacon Horner,
He sat in the corner
As the contribution box passed by;
Sweetly content,
He dropped in a cent,
And said, "What a good Christian am I!"

The head mistress of a certain village school was one day examining a few of her select pupils in grammar. "Stand up, Freddie, and make me a sentence containing the word 'seldom,'" she said, pointing to a small urchin.

Freddie paused as if in thought, then with a flush of triumph on his face replied: "Last week father had five horses, but yesterday he seldom!"—*Christian Register*.

He Had No Others.

After Fred had put on his shoes in the morning he complained of their hurting his feet. His mother looked at his shoes and said:

"Why, Fred, you have them on the wrong feet."

Fred began to cry.

"Well, mother, they're the only feet I've got," he said.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

WANTED—A few hundred agents to represent us in their home county. We give large commission on Inglenook Cook Book, Floral Wall Mottoes, etc. Write for our terms.—Brethren Publishing House, Elgin, Ill.

Syracuse, Ind., June 1, 1909.

Mr. James Glass, Big Timber, Montana.

Dear Sir: I arrived home day before yesterday, after a most pleasant and instructive visit to your Montana proposition.

I have been on the lands and investigated the irrigation system of Glass Brothers Land Company, and am convinced that the essentials of a very prosperous community are there, namely, plenty of water, rich soil and much sunshine; and I would say that the fine appearance and phenomenal yields of domestic fruit orchards in the vicinity of your lands, which have no spraying or other care given them, lead me to believe that commercial orchards of great value may be grown on your lands; and I would not hesitate to plant quite liberal of the hardier apples, cherries, plums and pears, and smaller fruits in the berry line.

Because of these conditions I hope and expect to be one of the number to possess these goodly lands.

(Signed) EDWARD DEETER.

Mr. Deeter is a noted horticulturist of northern Indiana and is a son of Elder Deeter of the Church of the Brethren.

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

1909 AMERICAN PROHIBITION YEAR BOOK

Just from the press. Contains a whole library of valuable information gathered from the most reliable sources. This little book chronicles facts and analyzes doctrines. It attempts new deeds. It is designed to equip and fortify the friends of temperance and prohibition as never before. In abstinence, in economics, in legal aspects, in studies of legislation and its results, and of national resources and political action, and in its whole field it says the latest word.

Here are many hundreds of things which the people wish to know in connection with the present widespread agitation on the liquor traffic and its record.

Bound in cloth, postpaid,50 cents

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

The Brethren Family Almanac for 1909

A FIRST class almanac for the home. The twelve calendar pages contain the date of over 300 important historical events. Every member of the church will be interested in the biographical sketches of such men and women as Elder R. H. Miller, Sister Sarah Major, Elder John H. Umstad, John H. Filmore, Elder Peter Nead and Elder Jacob Mack. Announcements concerning the Annual Conference for 1909, and a History of the Brethren Church in Franklin County, Virginia, are unusually interesting. The Ministerial List occupies nearly 19 pages and gives the name and address of the 2,938 ministers of the Church of the Brethren together with a list of the Gish Fund Books. Several pages are devoted to a list of the Home and Foreign Mission Boards of the church with name and address of the members of each board. Sunday-school workers will be interested in the list of State Sunday-school Secretaries. A cyclopedia of useful information. Sixty-four pages. Price, postpaid, 10 cents.

NEFF'S CORNER

On hearing of my intention to go to Mexico, some have supposed that the interests of those who have invested through me in Clovis would probably suffer. To such I wish to state that I have no less faith in Clovis as offering a good chance to those who want to invest in city property than I have ever had. I am offering none of my property here for sale that I would not have sold had I not intended going to Mexico. I am in fact negotiating for the purchase of more property here, and am building more houses. Elder M. M. Ennis will be here in charge of the church work, will also look after my rent collecting business and will superintend the building of any houses that may be ordered. I expect your interests in Clovis and mine to be looked after as well during my absence in Mexico as they have been. So, whether you are interested in city property in Clovis or farm lands in semi-tropical Mexico, write for further information to

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge. The book is beautifully illustrated. 151 pages.

Our Price,25 cents
(Postage extra, 5 cents.)

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

YOUR CHOICE OF LOCATION

"Church Extension by Colonization" is our Motto. We are locating our second Colony, with others to follow in other states in the near future.

COLONY NUMBER ONE

is located in the famous San Joaquin Valley, in "Sunny Stanislaus" county, near the center of California, adjoining the new town of EMPIRE. An organized Church of the Brethren is holding regular services and Sunday school in the new colony.

This location was selected because of its fine climate; snows and thunder storms are unknown there; because of its rich soil and fine irrigation system enable a great variety of crops to be grown; and because the excellent transportation facilities to the nearby markets make it easy to dispose of the products to good advantage.

Alfalfa is cut from four to six times a year, yielding from five to ten tons of hay annually, which sells from \$10.00 to \$15.00 per ton. All kinds of stock, dairying and poultry are handled with profit. The alfalfa remains green all winter.

All kinds of California fruits, nuts, berries and truck can be grown here, yielding good incomes.

A good Dairy Cow will yield about \$120.00 annually.

WHAT OTHERS SAY

A Pennsylvanian who has lived near Empire for five years says: "I am raising alfalfa only; that which was one year old and over, yielded nine tons per acre this year. We have 90 acres in alfalfa and are preparing to seed 100 acres more."—J. M. Bombarger.

A North Dakotan feels this way: "I will frankly say that the Empire location has more good points

than any thing I ever saw, you should not have much trouble in locating people here, even if prices are a little high.

Personally I am partial to the land around Empire. After about three week's investigation I find the land almost faultless in location, soil, drainage, railroads to markets. It will stand the very closest inspection."

—J. W. Boarderff

COLONY NUMBER TWO

This colony is being located near Portage la Prairie, Manitoba, in the great wheat Belt of Canada, about sixty miles west of Winnipeg, the Chicago of Western Canada, a city of over 100,000 population.

Four trunk-line railroads pass through the section in which the colony is located, giving excellent transportation to nearby markets. The raising of stock, wheat, oats, barley and grass are the principal pursuits here. Immense crops are grown annually of these cereals, wheat yielding from 20 to 40 bushels per acre. Lands are little higher here than in the newer sections; wheat brings from 10 to 15 cents per bushel more than in the western provinces. Homeseekers will find it advantageous to investigate our colony propositions here and elsewhere. Write us for fuller information about prices, terms and special rates for homeseekers.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Rare Ranch Bargain

IN ORDER TO CENTER OUR EFFORTS UPON THE DEVELOPMENT OF OUR TOWN OF MIAMI AND IRRIGATED LANDS IN MAIN PORTION OF MIAMI VALLEY, WE HAVE DECIDED TO OFFER FOR SALE OUR FAMOUS OLD RANCH HEADQUARTERS AWAY UNDER THE CURRENT PRICE OF SUCH LANDS IN THIS COUNTRY.

The ranch contains about 750 acres of fine, deep, rich agricultural land—forty acres reservoir water right from Farmers' Development Company mammoth irrigation reservoir, 20 acres alfalfa and natural hay land, about 100 acres in all under cultivation; natural hay land watered from floods and by underflow. A large portion of the balance could be placed under irrigation, but is capable of producing as good crops as any lands in the southwest through the natural rainfall. Entire tract fenced with substantial wire fences; crossed by three streams, one of which is the Rayado River. Abundance of fine water all over the tract for domestic purposes and for stock water. An ideal fancy sheep, cattle, mule or horse ranch.

Good well, large cistern, three substantial residences, large commissary house, two good stables, other out buildings and corrals.

Remember this land is a part of the famous MIAMI VALLEY, which is supplied with first-class church and school privileges, ideal climate, beautiful natural surroundings, the finest of people—in short the ranch is situated in the midst of an ideal home land.

\$11,000.00 FROM QUICK PURCHASER WILL TAKE ENTIRE TRACT WITH ALL IMPROVEMENTS, ONE-HALF CASH, BALANCE TO SUIT PURCHASER.

ESCHATOLOGY, or the Doctrine of Final Things

By Eld. T. T. Myers

This little book presents in condensed form the substance of a series of eight lectures delivered before the students of Mt. Morris College, during its fourteenth Annual Bible Institute. In response to numerous and urgent requests from those who attended the Institute this book was brought out. The present edition is reduced to some 25 or 30 copies. The book formerly sold at 25 cents. While our stock holds out we offer them at

10 cents each postpaid.

Order to-day. To-morrow may be too late.

REVISED EDITION OF

Ropp's New Commercial Calculator

And Short Cut Arithmetic

THE STANDARD FOR STORE, FARM, BANK OR FACTORY

Pocket Edition.

Greatly improved, enlarged and thoroughly revised. Contains an entirely new system of unique Tables, Short Cuts and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator ever published.

Has more than twice the matter, scope and capacity of Ropp's former editions, of which

Nearly 1,500,000 Copies have been Sold.

The Answer to Your Problem as Quickly as a Watch Shows the time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting to both young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

48 Cuts Illustrate the Elements of Mechanics and Mensuration.

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is especially designed for farmers, mechanics, business and professional men.

Three Editions, Five Bindings.

Office Edition (9½x5¼ in.)

Cloth binding, gold stamp, large type,\$1.00

Pocket Edition (6½x3¾ in.)

Cloth, with pocket, flap and silicate slate,50

Leather, with pocket, flap and silicate slate, gilt edge, 1.00

Vest Pocket Edition (5¼x2¾ in.)

Cloth, round corners, red edges,35

Leather, gold stamp, burnished edges,50

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA,
IDAHO, OF SEPT. 30, 1909.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Seom, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 43.

SAILORS' SNUG HARBOR

JOHN S. FERNALD

AMONG the many worthy institutions of America for making pleasant and comfortable the declining years of people whose days of activity are over, who are worn out in active service of one kind or another, the Sailors' Snug Harbor at Staten Island, N. Y., stands unique. More than a century old, and known by reputation wherever American seamen or their friends are to be found, it is generally thought to be a government institution. Such is not the case, however. It is a private charity in the strictest sense of the term, being supported entirely by the income of one bequest, which is more than ample for all its needs. Neither the government, the general public nor any charitable institution has ever been called upon or contributed anything towards its support, and the inmates are provided with all the comforts of life absolutely free of cost.

In 1801 Capt. Robert Randall, a wealthy shipowner of New York, made a will by which his farm in Manhattan was given for all time to the sailors of the United States. The farm was then of little value and the donor little dreamed of it ever becoming more than a home for a few disabled tars. But as the city grew the property rapidly increased in value and was soon surrounded by the bustling activity of the most important business houses and streets of the metropolis. The farmhouse was at first used for a home for the sailors, but in 1831, the trustees bought one hundred acres of land on Staten Island and began the erection of suitable buildings to accommodate the growing needs of the institution.

The Manhattan farm was improved and leases were made which provide an income that has always been more than sufficient for all the wants of the sailors' snug harbor, including improvements on the place, keeping everything fully up with modern ideas, and meeting all current expenses. A portion of the original farm bounded by Fourth and Fifth Avenues, Tenth Street and Waverley Place, is under a ninety-nine year

lease, with privilege of renewal, at an annual rental, for the land alone, of \$45,000. This lot contains the great marble business block built by A. T. Stewart and now occupied by John Wanamaker. The whole of the original farm is still held by the trustees of the Randall will, and is valued at \$80,000,000.

The Staten Island site was bought for \$16,000, and is now worth many times that sum. But neither this property nor the original Manhattan "farm" is in the market and never will be. Staten Island lies at the entrance of New York harbor and is one of the most important business suburbs of the city, as well as having several popular summer resorts. The records show that in 1567 the whole island was bought from the Indians for ten shirts, thirty pairs of socks, twelve coats and an assortment of knives and hatchets.

The Sailors' Snug Harbor comprises within its borders all the essentials of a modern community. There is a chapel where services are held every Sunday, but attendance is not compulsory and the number who attend regularly is small. The library has forty thousand volumes, and a reading room provides all the leading periodicals of the day. A music hall offers concerts, lectures and other elevating entertainment. A well-equipped hospital, with an able staff of surgeons and nurses, provides for all who need such ministrations. Electric works furnish the light and power needed and there is a fire department amply provided with modern apparatus and manned by some of the younger and more able-bodied of the inmates. The men also make a large vegetable garden to raise produce for the place, and fruit and berries are raised in abundance. A herd of dairy cows furnishes everything needed in that line, and goodly numbers of swine, sheep and poultry are kept. Twelve horses do the farm work and furnish necessary riding for the inmates and attendants. The carpenter and blacksmith work is done by the inmates, in shops on the premises. The buildings are large and of attractive architecture,

and are thoroughly equipped with all the modern conveniences. The entire farm is kept in first-class condition, and the walks, drives, lawns and groves are as attractive and well cared for as those of any private establishment in the city. The rooms of the men are large, airy and comfortable, and are furnished with all modern appliances.

The average number of inmates is one thousand, of whom about one hundred and fifty are in the hospital. This is not a large percentage when we realize that only those who are physically unable to follow the sea are admitted. To be entitled to the privileges of the Snug Harbor a man must have served on American vessels at least twenty years and have reached the age of sixty years, unless incapacitated by accident or disease, in which case the age limit is waived. Although no work is required of the inmates beyond caring for their own rooms, they are allowed to do any work about the place for which they may be fitted, and there are always enough who prefer some activity to keep all the departments of the institution well-manned. Each man receives three meals per day, of good, substantial food, with a bill of fare fully equal to that of the well-to-do classes throughout the city or country. He has three suits of clothes per year and a pound of tobacco per month. The men, almost without exception, use tobacco in some form, generally chewing, and although the trustees strictly prohibit the use of all intoxicating drinks by the men, they consider that depriving an old sailor of his tobacco would be a hardship they would not attempt to enforce. The men also receive a small wage for work about the place. All forms of gambling are strictly prohibited, but ample recreation is provided for in tests of skill in various lines and other forms of physical and mental exercise.

To the aged or disabled seaman who, for twenty years or more, has faced old ocean's storms this institution is veritably a "snug harbor," and he feels that here he has dropped anchor in safety after all the storms of life, even as he has many times before anchored his ship in some snug harbor after a long and boisterous voyage from a distant port.

THE REIGN OF THE COMMON PEOPLE.

W. ARTHUR CABLE.

I COME before you in this issue, bearing the burden of a theme which appears to be neglected, to be lost to due consideration among the important questions of the day which are continually confronting the public. True, this endless chain of current perplexities demands much and careful consideration; nevertheless, there are other topics, the rare worth of which merit no small attention, especially from those who are enjoying untold benefits therefrom. My subject involves you, it involves myself, it involves each one who claims relationship with our mighty nation. Greater still, it

involves all who have, pulsating within their bodies, one drop of human blood.

Just as the Egyptian taskmasters succumbed to a mightier authority, so a modern oppressor was shaken off, and the United States came forth a *free people*. The moment Thomas Jefferson wrote, "All men are created *free and equal*," you were weighed in the balance; when the Constitution went into effect, your authority was established. And what can be grander than for one, at this ecstatic time, to respond to the common summons, accept control of public affairs, and conduct a government "of the people, by the people, and for the people"? What person deserves more praise than he who, with a steady nerve, an unflinching courage, a never-failing diligence, guided the Ship of State, in all its frailty, safely through many a dangerous passage, avoiding peril after peril, cresting mountains of foam, pouring oil upon the surging billows of many a tempest of public rage, and havened the little nation securely in the family of world powers? All glory to our honored sire, the "Father of his Country."

What is more an emblem of common fellowship than for one public servant, without a murmur, to lay down power and authority that kings might envy, and for another public servant to take it up—because the people desire it? Monarchical countries have nothing to compare with it. The king gives up his power only with his life. Here the man who for a time has wielded more than kingly power quietly hands it over to his successor and retires to private life.

Now do not forget that you, too, are sovereigns of this kingdom. Do not overlook the fact that you have dominion, the same as your fellow, though he be far superior to you in ability and range of work. You each have duties which you must of necessity perform, you each have privileges which are yours to enjoy, you each merit reward for honest efforts on your part to faithfully execute the obligations of your office. You as individuals must decide on political questions; you must each determine for yourself, whether you will follow the dictates of your own conscience and the tenor of the Bible, or indulge in the coarse and sensual until "that little spark of celestial fire" has forever gone out; you are to say individually if you will permit and sanction these hell-holes dotted over this fair land of ours, and which are bent on both the physical and moral destruction of the weak, and of the unguarded, and of the ensnared of our population,—of our *brethren*.

And do you ask if this spirit of democracy is not becoming world-wide? It is, else why do we hear from all sides the clamor of "Rights of the Common People"? Even the narrow-hearted nations of the East are yielding to its sway. China, that semi-heathen nation, is melting under its widening influence.

Monarchy submits to the demands of the people; a constitutional form of government has been indorsed.

Great is the individual good resulting from a reign such as we are all participants of. Each one surrenders to a life of service, yet how can one better spend his life than for the betterment of humanity? There is nothing that demands more toil; there is nothing that requires more self-sacrifice; and there is nothing that awards larger dividends than service to fellow-man. The weight of the responsibility which one assumes is incomputable, but the compensations received are everlasting. It is the reign of the common people that allows me to grasp my coworker of much wider range by the hand and in a clear and hearty voice, bid him Godspeed in his noble work, with the addition: "God will that I may, by just and honorable means, attain the distinction which is yours, possess the ability which you possess, and bear the responsibility which you so notably sustain. And I look to you for help." It is the reign of the common people that permits you to take your brother by the hand, though he be in the depths of degradation, in the mouth of hell, and say to him, while a loving arm encircles him: "Brother, be a *man*! Forget your past folly and repent of your sins. We need you with us; there's plenty of room there. There's a vacant place at the top which only *you* can fill."

May it be the Divine will that this source of personal help, this strength gained by usefulness to others, this "spiritual law in the physical world," established by so conscientious a people, "may not perish from the earth."

Scottville, Michigan.

THE OPTIMIST AND THE PESSIMIST.

LUELLA G. FOGELSANGER.

THE optimist is always in demand, the pessimist never. The optimist looks on the bright side of things, the pessimist looks on the dark side. The optimist laughs, the pessimist cries. The optimist smiles and says, "What a beautiful morning," the pessimist frowns and says, "I suppose it will rain before night." The optimist adds and multiplies his blessings, the pessimist subtracts and divides his until there is nothing left.

Some people remind us of "lemon squeezers." Their particular occupation is squeezing sour out of everything. They never find anything sweet. In this world we usually find what we are looking for. If we look for good in people we find it. Evil is ever present in men and can always be found, but the optimist with his magnifying glass of charity searches out the good. We must believe in others if we wish others to believe in us.

Hope plays a great part in success and happiness. People who see good things coming, who try to think the best of everybody, are likely to realize just these things. They put themselves in the attitude to receive these. Their minds attract the things they are looking for. Like attracts like. People who look on the dark, seamy side of things draw upon themselves just those conditions. While our characters are in the formative period we should train ourselves to be optimists. We should train ourselves to look for the best in things, in conditions and in people, and then verily the Lord will find some good in us.

The optimist laughs, the pessimist frowns. Next to the sunlight of heaven is the cheerful face. It beams on us like an autumn sun; it cheers us like an evening breeze; it refreshes us like an April shower. "Laugh, and the world laughs with you, weep and you weep alone," is a very true saying. Laughter is a tonic, it gives vitality to the body, mind and soul. Cheerfulness makes us useful in this world. The pilgrims to Mecca considered a cheerful face so essential that they called upon their prophet to save them from sad faces. What a beautiful thought. May we add this petition to our daily morning prayer, "Dear Lord, give me this day a loving heart and a cheerful face that I may be useful to my fellow-men and to thee. Amen."

May we learn to smile when the tear is starting; to pray when the way is dark; and to help another when the heart is breaking. The glad heart is the keynote to the cheerful face.

"Keep the heart in tune, and let its music draw other hearts to yours, that your gladness may be to them the keynote, which shall be like a sweet chime ringing out the music of a Better Life, whose harp resounds with melodies of Heaven."

Shippensburg, Pa.

PROCRASTINATION

RICHARD BRAUNSTEIN

Youth is a heedless, noisy hour,
With every folly fraught;
But man, by age's chast'ning power,
Is sobered into thought.
Then we resolve our faults to shun,
And shape our course anew;

But ere the wise reform's begun
Life closes on our view.
The trav'lers thus, who wildly roam,
Or heedlessly delay,
Are left, when they should reach their home,
Benighted on the way.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER.

Chapter LXXIX. Northern India and the Himalayas.

I SUPPOSE I'm the only traveler who ever started from southwestern India to go all over the northern portions of this great country, thence east and on through many other countries on twenty dollars. I was too weak yet to earn any money, but the rate of fare is very low, and I was allowed the courtesy of riding in the first-class and second-class coaches on a third-class fare. It was now March, and as April is the hot month in some parts of the country through which I must go, I hurried on, stopping two days to see the great Taj Mahal at Agra, and putting up at the monster, one-story hotel, with portico like a station house,—Aurie's Great Northern Hotel.

I next visited Cawnpore and Lucknow where the heat was far more intense, and I remembered the stanzas of the poem: "And ever upon the topmost roof the banner of England blew." I was right there, on the scene of that bloody rebellion.

The Himalaya mountains are off my route of travel but I am on the mail train rushing across the desert north of Calcutta for Darjeeling. On my way here I stopped at Benares and walked along the Ganges, the most sacred spot to the Hindus in India. Mrs. Dr. Moore of the hospital here was kind enough to pay my fare on one of the little house boats, from the

roof of which she and I enjoyed several miles of river scenery, where I saw the old temples of the Hindu heathen falling into the muddy stream, some of the idols of which were being slowly covered by the Ganges as they settled lower and lower in the mud. The heathen temples were decaying and falling down. The Christian institutions all around were going up.

Christianity was coming.

On the way to the mountains I could see rice and jute growing in the level fields. The charm of scenery began when our little train of cars on a two-foot track commenced the seven hours' climb up the highest peaks in the world. Every town in the mountains added to the gorgeousness of the wonderful

scenery about me. The trees here and the foliage were almost entirely strange. The people living in these mountains were indescribably interesting, changing in looks as we ascended. They were so agreeable looking, and everybody wore a smile. I believe the happiest people in the world must live in the Himalayas.

In no other place have I seen faces and dresses and smiles just like I got here. The children are not only pretty but they are cute and playful. Their eyes and mouths are strikingly winsome and their full face is gratifying. Over these mountains women and children carry incredibly heavy weights, a big rock or bag of grain,

Great Northern Hotel at Agra Where Our Traveler Stopped While Studying the Beautiful Taj.

Two little girls stamping out the flour, one of which rocks the baby at the same time, on her back. Our train of little cars stands just by.

sustained on the back with a rope around the neck. The face is sometimes coarse, but it is wholesome and even beautiful, and it smiles at you. Being still weak from my illness, it took rather more nerve than I could summon to keep my seat in this little train as it wound around dangerous cliffs, and many times crossed its

H. M. Spickler Carried in Dhandy, by Five Men in Himalaya Mountains.

own little track by spiral climbs, the engine snorting like a real locomotive on the Pan Handle, and the wheels screeching on the abrupt curves.

The air here is cool like spring at home. Then it becomes cooler and is almost like winter, and I rejoice that I am in a land once more where the air is salubrious and cool, and that I have passed out of malaria-infected, sand-blown, furnace-heated India.

The hotel was nearly full of travelers who had come up here just to see the highest mountain in the world, Mt. Everest, that rises toward God twenty-nine thousand feet. A pleasant room was assigned to me that looked out over the peaks, but during my stay here the clouds of mist never quite lifted their depressing robes from the chaste summit of Everest, and so I can come again,—and I will, if I live long enough.

Not five or six, but several hundred tea estates are scattered around here over the mountains, many of them very large. The tea is grown on bushes about as large and similar in appearance to ordinary currant bushes, or hazel bushes trimmed low. A tea farm rivals the beauty of a corn and wheat farm. The straight rows of tea bushes growing about as thick as rows of corn in America, bend down and curve over the sides of the hills with a beautiful foliage picture. The fifty thousand acres of tea produce eight million pounds. Mr. F. B. Baker, the owner of the estate, was at the club, but a genial gentleman showed

me around the factory where tea is made, explaining to me how the tea, put into big hoppers, is thoroughly dried and cured and prepared for delicate and elegant ladies to sip in London, New York and Polo. I regret to say that little of this tea ever reaches the ordinary consumer throughout our country. American tea merchants, full of graft, as are most all of the great merchants of today in our country, handle inferior teas. A drink of this pure Himalaya tea is an eye-opener in merchandise wisdom. Every one who tastes it says: "Why, how is it that we can not buy this at home? It is so much better than the best tea we have there." And yet this tea is cheap. Four sample boxes with about three tablespoonfuls in each, and a full pound of the tea were given me and I propose to use it in my country. A teaspoonful will make from one to three cups of the best tea you ever drank,—so delicious that you must say so while you drink it. In color it is black. In size, it is broken. All around the tea estate were wealth and beauty. The houses of Mr. Baker and of the other owners were pretty and sitting amidst a profusion of flowers. In great contrast was this to the huts of the workers and their families. Little children of the workers were playing around and working, in rags. Though they lived amid one of the greatest assets of wealth shared us by nature and improved by the strong arm of the toiler, these very toilers were starving for the simplest things.

At daylight one morning we rode to Tiger Hill, six

If the brakes had not worked, the whole train and passengers would have been hurled over an awful precipice. Many tourists on the train carried kodaks, but Mr. Spickler was the only one who thought about getting a snapshot.

miles up and away, the customary servant running along near the bridle of my horse. My horse felt good and I could scarcely hold him from running away. The footman could not always keep up and several times I came near being thrown over the saddle and down

yawning steeps. For although Hotel Rockville sits right on top of the highest peak in Darjeeling, and is therefore safe from a landslide, Tiger Hill, where travelers go to view the mountains, is out of the city and still higher. The natives here believe in praying by proxy, their proxy being long slips of dried paper tied to the ends of branches of trees growing on the peaks. Some of the trees on Tiger Hill were full of these curious prayers. Not believing in them, and knowing it to be a custom not objectionable to those who tied them here, I removed samples of these prayers and brought them along as curios. The worshipers who put them on the tree would get just as much help from their idols, whether they blew in the Himalyan breeze there on top of Tiger Hill or were tacked to the ceiling of my den in the United States.

On the way down the mountains, our train was all but wrecked. While running at full speed, loaded in every nine cars, in rounding an exceedingly sharp curve where the track could not be seen more than for a distance of seventy-five feet ahead, our train suddenly put on brakes so quickly as to throw passengers from their seats. I knew something special was wrong, so I leaped from the train when it had stopped and with my camera being adjusted, ran ahead to find that an ox team with a big load of rock had stalled upon the track, the three men in charge working as hard as they could to coax the oxen to pull the obstruction from the rails. The engineer succeeded in stopping the train when about fifty feet or less from the load, which was almost miraculous, for had we struck it in this place at even a slow rate of speed, the train would have undoubtedly rolled from the track, and down over the chasm thousands of feet to total destruction. The railroad here follows the wagon road that hangs on the very side of the mountain, the trees of which, growing at the left of the picture, showing their tops in the lower left corner, show the steepness.

We might have tumbled on a deathbed of ferns and flowers, for thirty varieties of ferns grow in these mountains and the flowers are particularly gorgeous. The *tree* standing higher and apart from the rest, in the picture, bore flowers as big as your head, and as red as blood. The passengers were thrown into a sort of nervous panic when they saw what they had just escaped by the bare distance of a car or two from the obstruction.

All Rights Reserved.

UNDEVELOPED TALENTS.

H. D. MICHAEL.

IN the early settlement of the mountainous sections of Western Oregon and Washington nature seems to have played an important part. The low river bottom lands were covered with such a dense growth of several kinds of hard wood and though they were by far the

richest lands still it was such a long and hard task to clear it ready for use that many of the remote hilltops were settled first. There in the mountains the prairies afforded fine grasses while the rich, black prairie ground proved good for orchards and cultivated crops though not equal to the bottom land. Thus many of the early settlers went 'way back into the mountains and many of them or their descendants are still living on the old homestead, still holding the same old place far back from any town or many neighbors.

Then schooling was hard to secure, for none that were seeking a home and would settle back there could afford to hire a private tutor and many a family lived so isolated from all others that it was impossible for the children to attend the little short-termed country schools so that many could receive no schooling but were taught by their parents who often had but a meager education themselves. This left some to grow up ignorant and worthless loafers, while others, more ambitious and resourceful, made the best of it and became self-educated, and though not so famous as our great President Lincoln was, after just such a start in life, still they have become worthy and respected citizens and are not drifting through the world aimlessly as some do that have not had such a struggle in starting.

The struggles of some, if known my many now so favorably situated, would serve as a spur or goad to stir them to greater efforts. In one family, which like most of those early settlers' families was a large one, there were two girls that early had a taste for painting, but at that time it was as near impossible for them to get the necessary paints and equipments as it is now for most of us to own and sail in our own air ships, but they undaunted set to work and from the wild flowers and berries soon had several colors, and by making some brushes they were ready to use all their leisure time in practice. It has been a pleasure and inspiration to me to see their paintings and note their improvement. Several of the last I saw, not being an artist myself, I could not detect the slightest error in the blending of the colors or naturalness of the scenes. They have many scenes of mountain landscapes and deer, as they have lived among them all their life.

Of course, now they can buy their materials and also paint a large range of scenes. Though I never got to see the picture, I was told by others of one of the girls once seeing a six-horse team for the first time; so she noted the horses, harness and driver well and went home and painted it so well that no one could point out a mistake in color or horses, or the arrangement of the harness, or even the features of the driver.

Then, too, the girls carve out toy animals and paint them, using rooster spurs for horns for the cattle and the toys are so well shaped, and painted so true to their natural color and making that anyone knowing

thoroughbred stock can tell at a glance what kind they are.

Then two or three of the boys, of whom there were six, I believe, have with their little forge and poor equipment of tools acquired an efficiency in turning out fine tools and many articles that many men cannot attain under the direction of the most competent teachers of such.

I once examined a pocket knife one of the boys had made and on the side of the bright steel handle of about five-eighth inch width by four inches length he had engraved a sailing schooner with the rigging all set and so careful was he in all the details that a careful scrutiny failed to detect any error, as each part seemed to be there in perfect condition. Now think of what results might have come from a full development of those talents had nature not made it almost impossible. Nations might have been startled and the world aroused by their ability. Those girls might have painted pictures that would have led many to a higher plane of living and have inspired many to nobler deeds or have cheered the hearts of many of life's weary travelers. The eyes of many, careworn and weary, might have been turned to the only true source of comfort and help. But with the poet (I can't recall who) we can say:

"Full many a flower is born to blush unseen,
And waste its sweetness on the desert air."

Then had it been possible to have developed the latent talent of those boys they might have turned out to be another Thomas Edison or Nicola Tesla. They might have given the world inventions that would have been a boon to all mankind. Does it not seem sad that their talents have lain almost buried?

But how about your talent, my friend? I believe none of us are entirely without some natural gift, small though it may be. Are we doing the world and ourself justice if we do not develop it to the fullest? We might not be a gifted artist, musician, or inventor, but our gift may be of a more commonplace nature, but that is not saying it is not important in its sphere.

But if at the close of our life here no one has been benefited, no one's burdens made lighter, no one inspired to labor the harder to reach higher ideals, or no one lifted up from their fallen condition and started again on their way rejoicing because of our having lived here among them, then we must have buried our talents when we should have spent all our energy in developing and using them. "Any good that I might do, any kindness I may show, let me do it now, for we pass this way but once."

Pasco, Wash.

A SHAKESPEAREAN ALPHABET.

LOVERS of Shakespeare, says the *Louisville Times*, will be interested in the following "Shakespearean Alphabet," which is complete with the exception of the

letter X. A search failed to show any quotation from Shakespeare that begins with that letter:

Assume a virtue if you have it not.—Hamlet.

Brevity is the soul of wit.—Hamlet.

Corruption wins not more than honesty.—Henry VIII.

Delays have dangerous ends.—Henry VI.

Every why hath a wherefore.—Comedy of Errors.

Fling away ambition; by that sin fell the angels.—Henry VIII.

Give every man thine ear, but few thy voice.—Hamlet.

How poor are they that have not patience.—Othello.

I'll make assurance doubly sure.—Macbeth.

Jesters oft prove prophets.—King Lear.

Kindness, nobler ever than revenge.—As You Like It.

Lowliness is young ambition's ladder.—Julius Cæsar.

Murder, though it have no tongue, will speak with most miraculous organ.—Hamlet.

Neither a borrower nor a lender be.—Hamlet.

One touch of nature makes the whole world kin.—Troilus and Cressida.

Poor and content is rich and rich enough.—Othello.

Quenched in the chaste beams of the watery moon.—Midsummer Night's Dream.

Rich gifts wax poor when givers prove unkind.—Hamlet.

Sweet are the uses of adversity.—As You Like It.

The end crowns all.—Troilus and Cressida.

Uneasy lies the head that wears a crown.—Henry IV.

Virtue itself 'scapes not calamitous strokes.—Hamlet.

What stronger breastplate than a heart untainted?—Henry VI.

Your face, my thane, is as a book where men may read strange matters.—Macbeth.

Zounds, I was never so bethumped with words since first I called my brother's father dead.—King John.

THE ALTERATION OF THE COLORS OF FLOWERS BY CULTIVATION.

In general, all the flowers of the same species in the wild state, have the same color. For example, all plants of crowfoot or buttercup and dandelion have yellow flowers. In a few species, different colors are found. For example, the flowers of the milkwort (*Polygala vulgaris*) may be blue, violet, red, or white. Much greater variation is shown by cultivated plants. In these the variation of color of the flowers appeared long ago, but in recent years, many new colors have been produced which had either not hitherto been observed, or which, if they did appear occasionally, were not selected for preservation and development. The

floriculturists of the present day carefully observe and endeavor to fix every new shade, even if it is not particularly beautiful, for the desideratum is novelty, and there is no telling what will please the popular taste. But in these attempts to obtain new colors in flowers, the propagator is entirely dependent upon the innate predisposition of the particular species with which he is working. He can by no means obtain every desired color. In the following sketch will be mentioned, first, a few cases of species in which a color has been obtained, which was formerly considered impossible. Some other examples will be adduced to show that in certain species a great many new colors and shades, but not all colors, have been obtained. Finally, a few other cases will be quoted in which the flowers of a species have shown little or no variation in color during many years of cultivation.

A species of primrose (*Primula acaulis*) in the wild state, always has lemon yellow flowers which vary only slightly in tint. Cultivation has produced both lighter and darker shades but, until recently, no color but yellow. Hence it was the more surprising when, a few years ago, a pure blue variety was produced, which has since retained its general color but has developed all shades, from the palest sky-blue to the deep blue of the corn-flower. The Chinese primrose (*Primula sinensis*), when cultivated in the garden, bore until recently only red and white flowers. In this species, also, other colors have lately been produced, not only violet but also blue, though not so pure a blue as that of the species first mentioned. Another example is offered by the gladiolus, which formerly bore only white and red flowers but has recently developed a blue-flowering variety. A case of a somewhat different character is presented by the asters, which have long shown a great variety of colors, but in which recently a great many new shades have been produced, including some which would not at one time have been considered beautiful, for example, copper-color.

Very numerous, on the other hand, are the species which have long shown great variation in color and have recently developed many new shades, with the exception of blue. Especially conspicuous in this connection is the dahlia, which is now found in every color except blue, although many propagators are making earnest efforts to produce a blue dahlia, which would bring great profit to its originator. A blue carnation would be equally valuable but it has not yet been produced, although the colors of carnations have lately been enriched by many new shades. The new varieties of canna also show a great diversity of color, including almost pure white and a beautiful light pink, but a blue canna has not yet appeared. In the begonia not only blue is lacking, but also all shades from red to violet. Finally, we may mention the variety of poppy called the Shirley, which is greatly admired for its play

of color. Here, however, the colors range only from white to rose and vermilion. Blue and violet colors are completely wanting and so is yellow, which is very common in the begonia.

Other species which have recently produced many new tones, with the exception of blue, include: Pelargonium, Scahosa, Calceolaria, Antirrhinum, Mirabilis Jalapa (Four O'clock or Marvel of Peru), hollyhocks, immortelles, and some species of Phlox and Godetia. The Gilliflowers, Wallflowers, and Balsams belong in the same category, for the varieties of these three flowers which are described as blue in seedsmen's catalogues are not pure blue, but violet.

It should be observed, furthermore, that among species which have produced many new colors, there are some in which the color yellow is wanting. This is the case with some species of larkspur (*Delphinium ajacis* and *D. consolida*), with *Dianthus Heddewigii* and with the verbenas and Clarkias.

Finally, there are species which, notwithstanding many years of cultivation, have shown little variation in the color of their flowers or have produced only new shades but not new colors. Among these are the fuchsias, which show only various shades of red. A blue or a yellow fuchsia would be a curiosity. Another example is furnished by *Cyclamen persicum*, in which many years of cultivation have only changed the original color scheme of a dark red throat and a white or pink tip so far as to deepen the red throat to crimson and almost to violet and, on the other hand, to efface it altogether, producing a pure white flower. Quite recently, however, an approximation to a yellow has been obtained by the production of a salmon-pink cyclamen. Similar cases are furnished by the Alpine forget-me-not, in which merely the shade of the original blue color has been slightly altered by cultivation, and by the marigold (*Tagetes*), the colors of which vary only from yellow and orange to brown.

From the foregoing remarks it is evident that, although very many new colors have recently been produced by cultivation in the flowers of numerous species of plants, the production of these changes is entirely dependent upon the original predisposition to variation possessed by the plant. Without these tendencies to variation, no new color can be produced, either by the gardener or by natural selection, for if there is no variation, selection is impossible.—Prof. F. Hildebrand, *Translated for the Scientific American from Umschau.*

ABOUT MONEY.

NOTHING in the world is quite so interesting as money. A few millionaires have told their less fortunate brethren that wealth is a source of endless trouble, but the world hasn't yet given up the search for more. People like to talk about money; they like to handle it, make it, spend it, hoard it, and hear about

it. Here are a few interesting facts concerning this much sought after commodity:

The most ancient coins are of electrum, four parts of gold to one of silver.

Before the days of coined money the Greeks used copper nails as currency.

Herodotus says that Cræsus was the first sovereign to make coins of gold.

Julius Cæsar was the first man to engrave his own image on a coin.

Homer mentions brass money as in use 1184 B. C., among the Greeks.

The Lydians were the first to coin money, about 1600 B. C.

Many Roman tin coins are still in existence.

The gold coins of Great Britain contain one-twelfth alloy.

The Spartans had an iron coinage.

The United States silver three-cent piece was first coined in 1851.

The English mint was established by Athelstane about 928.

From 1828 to 1845 platinum coins were minted in Russia.

The first coining machine was invented by Bruchner in 1553.

The notes used by the Bank of England cost exactly one cent each.

The first colonial coinage was minted in Massachusetts in 1652.

In the tenth century there were thirty-eight mints in England.

The American cents of 1787 bore the motto "Mind Your Business."

During the reign of Henry VIII twenty-three to twenty-five per cent of coin metal was alloy.

The coinage of twenty-cent pieces began in 1785, and was discontinued in 1878.

In 1503 the first English shilling was minted.

The first English laws against counterfeiting were issued in 1108 by Henry I.

The United States mint was established in 1792, and at once began operations.

Silver was first coined in Rome in B. C. 269, when Fabius Pictor set up a mint.

In 1844 Napier's coin-weighing machine was used in the Bank of England.

Over one thousand series of Greek coins, issued by independent cities, are in existence today.

In the fifth century before Christ, refined copper was deemed as precious as gold.

The coinage of trade dollars began in 1874, and was discontinued in 1878. They were originally intended for use in commerce with China, India, and Japan.

The first American coins were made in England in 1812 for the Virginia Company.

The first English gold coins were minted in 1257.

In 1631 the invention of milling the edges of coins, to prevent clipping, was introduced.

Down to the Norman Conquest, the Britons had "living money," and "dead money"; the former being slaves and cattle, the latter, metal.

English sovereigns were first minted in 1489.

During the reign of Numa Pompilius, 700 B. C., an experiment was made with wooden money.

The bronze cent and two-cent pieces were first coined in 1864, and the nickel half-dime in 1866.

The earliest Greek coins bore a lion or tortoise on one side, and a punch mark on the other.

English coin was first made a legal tender in 1216. Before this, rents were paid in produce.

In 1237 the English coined gold pennies which weighed 1-120th of a pound, and passed for twenty pence.

Vermont and Connecticut coined coppers in 1785. New Jersey and Massachusetts did the same in 1786.

Paper money was first issued by the notorious John Law. His issues exceeded one hundred and twenty million pounds.

In the days of '49 of California, the ounce of pure gold (sixteen dollars and fifty cents) formed the common medium of exchange. Another interesting form of money was a lump of gold, called a slug, equaling just fifty dollars.

In 1620 the first large copper coins were minted in England.

In the early years of this century there were thirty-three tons of silver to one of gold in circulation.

The Romans issued private or consular coins which bore the names of every leading Roman family.

In one thousand ounces of our gold coinage there are nine hundred ounces of pure gold, ten ounces of silver, and ninety of copper.

It is an interesting fact that the Japanese coins in the matter of fineness are superior to all others.

Absolutely pure gold is twenty-four carats fine.

Sea-shells were the earliest forms of money; the skins of animals coming next as a substitute.

In India cakes of tea pass as currency, and in China pieces of silk.

Norway even now uses corn for currency.

Sheep and oxen among the old Romans took the place of money.

In some districts of New Guinea female slaves form the standard of value.

The Icelandic and Irish laws yet have traces of the use of cattle for money. Many Teutonic fines were paid in cattle.

NATURE STUDIES

BIRD SLAUGHTER.

MAUD HAWKINS.

WHICH is the greater sin, to destroy innocent birds for the amount of money there is in their sale, or to wear their feathers after they are killed and to be willing to pay a tribute for their slaughter and make it possible for the bird killer to derive a profit from the traffic?

Some women who would stand aghast at the idea of the killing of birds would not hesitate to wear their beautiful plumage when bought from their milliner. They would rise up in arms if a hunter should but shoot a bird in their presence, but they do not consider that if they did not wear the feathers there would be no birds killed.

The wearing of feathers of dead birds is done thoughtlessly by the majority of women. It probably has never been brought to bear upon their minds where these beautiful feathers, quills, wings, heads and even WHOLE BIRDS came from.

Some imagine, if they give it a thought at all, that they are simply creations of the milliner and that is the extent of thought given to the matter.

When their attention is called to the facts and they see wherein they are sanctioning or encouraging a cruel practice, when they see the folly and realize the great agony suffered by the young birds whose mothers have been sacrificed for the sake of furnishing them with fashionable hat ornaments, they forever pass the bird decoration for something more civilizing, for to say the least it is a barbarous custom. If it were not so common a practice it would certainly be considered heathenish to walk down the street with a dead bird perched upon the head. The custom is losing popularity, and we hope in a few years to see no birds or feathers worn.

Towanda, Pa.

THE SILK WORM.

THE silk worm is a caterpillar of the silk worm moth. The entire period of its life is about thirteen weeks. Within this time it changes its form three times, the first nine weeks of its life being spent in the caterpillar state, the next in the chrysalis state, the last week in the moth state.

The natural food of the silk worm is the white

mulberry, though it can be raised on other varieties of this tree, also on hedge or osage orange.

The eggs of the silk worm are about the size of a pinhead, circular in form, somewhat flattened, and of a dark brown color. They are laid at the close of one summer, and hatch at the beginning of the next. In the tropical countries they hatch at the proper time, and by the natural heat; but in colder climates artificial heat is required for successful hatching.

When the eggs begin hatching mosquito netting is spread over them and on this, fresh cut leaves are placed. The little caterpillar knows how to help himself, so he at once crawls through the netting and begins eating the leaves. When there are as many on the netting as can live together, without being crowded, it is removed and another netting placed on.

When the nettings are removed they are placed on trays. These trays are usually made about two feet square for convenience in handling. The bottoms of these are made of coarse network, so that when the silk raiser wishes to change the caterpillars to another tray, all that is necessary is to place a tray on the one containing them; put some fresh leaves on it and the caterpillar will at once crawl through the bottom on to the leaves. Unlike most caterpillars, they are content to stay within a small space, and will spend their entire life on these trays if kept well supplied with food.

When first hatched they are not more than a quarter of an inch in length, and are of a dark brown color. They eat voraciously, grow rapidly, and by the time they are ready to spin they are about three inches long. During this time their color gradually changes, and now they are a beautiful straw-color.

When they are ready to spin, small branches or twigs are placed upright in the trays. In these small bunches of crumpled leaves are placed. The caterpillar crawls into the branches, and, after finding a suitable place, begins spinning. First he weaves a coarse, rough fiber for his support; in the middle of this he spins his cocoon.

It is interesting to watch him spin his silken house. At first only a dim outline of it can be

seen; within this you can see the little spinner laying the thread around, first at one place, then at another, gradually making the wall of his cocoon thicker; and finally he is hid from sight, but it requires him three more days to complete his spinning.

If left undisturbed in the cocoon for two or three weeks he will come forth in his perfect state, in the form of a beautiful white moth. In this state he eats little or nothing and lives only about one week.

The cocoon is straw-colored and looks somewhat like a two-kerneled peanut, so much so that children have mistaken them for such. In order to get out of the cocoon the moth eats through one end of the shell, thus making it unfit for reeling. To prevent this injury, the chrysalis is killed by throwing the cocoon into hot water, by steaming, or by carefully heating them. Thus the life of the silk worm, whose motto is, "Not for ourselves, but for others," is brought to a close.—*Amanda Brown, in Lordsburg College Educator.*

MAKE YOUR ROADSIDE A POEM IN VINES.

How tame is the drive you take every day from home to office? How many ugly places do you wince at in your daily walk?

Remember the vine-clad stone walls of Connecticut. Think of the great clouds of Virginia creeper you have seen by some country roadside! How your eyes sparkled every day in winter when the red berries of bittersweet glowed upon the horizon!

How all those ugly spots would be transformed by Virginia creeper!

What if that raw bank that annoys you daily were covered with masses of Hall's honeysuckle, which would give you great gusts of fragrance in June, scat-

tering flowers all summer and a bit of greenery in November after the trees have shed their leaves?

Trumpet creeper, too, is running wild in many an old garden near you. Some of it could be spared for the woodside so that you might catch a glimpse of humming birds hovering before the great scarlet-orange trumpets.

Is there any odor equal to that of wild grape in June?

Isn't this a superb list? Yet all of these are native or run wild in America. Some or all of these you can have for the mere trouble of digging. The time is approaching when you can safely transplant a few vines to animate your daily walk. No one will hurt them. Year by year they will increase in size and beauty. Your neighbors will catch the enthusiasm. And in ten years a mile of roadside between your house and the railway station will be a poem in vines. Every visitor will rejoice in it. Your locality will be famous for it.

As soon as the trees shed their leaves, plant vines. But don't wait till then to locate them or you will have trouble in finding them. Scour your neighborhood now, make a list of what is available and move half a dozen vines this fall.

Don't you know a spot that needs creepers badly? Can't you cover it with Hall's honeysuckle. If not, don't you know a colony of ground ivy or moneywort that isn't working?

There was a mile of pink flowers that used to rejoice me from August to October when I lived along the line of the West Shore Railway. It was produced by the mist flower (*Mikania scandens*), which grows wild in moist places.

Join the Roadside Gardening Club now! It is a new fraternity that has no expenses or red tape and only one aim, viz., to make every foot of your daily walk or drive delightful the year round without expense.—*Thomas McAdam, in the Garden Magazine.*

SPELLBOUND

M. M. WINESBURG

The charm of the season is now with us here.
Hark to the sounds that come to my ear;
Listen to the murmuring low and long,—
The woodland is singing a grand sweet song;
With a rustling of leaves and a sweep of the bough,
Nature is holding a musical now.

The blackbirds are holding their carnival 'round,
And the caw of the crow has a musical sound;
While the mocking bird—ah! list to his lay!
He's thrilling and mocking the livelong day.

Out from the tangle of grass where you tread,
Br'er rabbit leaps out with a toss of his head;
There's a twinkling of feet and a glimmer of white,
A rustling of leaves, then he's gone from your sight.

Down in the thicket of brown berryvines
The quail's pipe is keeping in tune with the times;
While the dry leaves are falling and dancing around,
Up in the air, or down on the ground.

Down by the river, with its girdle of pine,
We see just the mystics it holds in its shrine;
A fringe of dark green on which the mists lay,
As blue as the sky of this bright autumn day.

Bright is the picture and sweet is the song
Nature is singing as she passes along;
If you list to her music you surely will say
It's good to be living on this glorious day.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

* The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

Not always do we have such a clear demonstration of how the good we do goes on growing and blessing mankind as that which is given in the "Sailors' Snug Harbor," in the case of the gift of Capt. Robert Randall. Whatever form our good deeds take they go on increasing just the same. Some may not be so easily calculated as Capt. Randall's, but the returns are just as rich, the investment just as paying.

GET OUT OF DOORS.

It would be hard to find any time in the year when a journey into some part of the limitless regions of out-of-doors would do one more good than at this time. Especially in the woods, where the leaves are already piled high and more are silently falling, can one find an atmosphere that is at once restful and inspiring. The gay autumn flowers and leaves, the genial warmth of the sun, with merely a hint of frost in the air, and over all the sense of repose, of rest after toil, lead one to banish care and to steep his being in the peace-giving influences. And while he rests and meditates he finds courage and hope and inspiration.

While one may make this journey into nature's realm without any particular object in view, it is better to have some aim, such as gathering nuts or collecting autumn leaves. However, the object should never be so serious or absorbing as to demand too much of one's attention. It should allow one to step aside here and there to look at other attractions, at the same time leading him on and on until he is completely under the influences that will make him a better creature,—more in the likeness of his Creator.

The argument that one hasn't time for such an excursion is not worth considering in view of the beneficial results that it brings. Leave the work for a day. The spirit with which one will take hold of it again after this day off will be worth much more to it than

any amount of dogged tenacity with which one may otherwise prosecute his tasks.

REASONS FOR PEACE.

THE American Association for International Conciliation is this month publishing a lecture on the "United States and Spain," by Martin Hume, a lecturer at Cambridge. The educator discusses the relations of the two nations, dwelling particularly upon the grounds for mutual friendliness and good will—convincing argument that there is no possibility of another war between them.

The reasons set forth for amicable relations may be used in the case of the United States and almost every other nation on the face of the globe. There are always more reasons, economic as well as moral, why we should live "at peace with all men" and nations than there are for war with its train of evils. And no seeming reason for war can be so insistent as to wholly drown out these voices of peace. War is wrong in principle. Because of this there can be no legitimate reason for it; all reasons must be manufactured. Therefore it is the part of wisdom for the United States, as well as other nations, to see all the reasons for peace with other nations and to manufacture no reasons for war.

"THE PRACTICE OF OSTEOPATHY."

A BOOK appearing under the above title has just been published by the House, that is, the home of the INGLENOOK, and is offered for sale by The Elgin Health Publishers, Spurling Building, Elgin, Ill. The book contains 335 pages; well bound in cloth, it will be sent prepaid for \$2.50, or in half Morocco for \$3.50.

The science of Osteopathy while not yet thirty-five years old, has won the general recognition which it now enjoys as a means of healing in the face of most bitter opposition. Only a science that is one in truth and that can give abundant proof to substantiate its claims could come through the fight with so much to its credit as has Osteopathy.

The author says that one of the objects of the above work is "to present the practical side of Osteopathy in a very plain and simple manner." It was his aim so to explain the methods used that mothers might treat their children and that practitioners would so recommend as he himself has frequently done and that nurses might assist their patients in a very practical manner under its guidance. The author believes in the sentiment that is growing rapidly in the medical world, that "all that is good in medicine should become common property; that there is too much ignorance among the people concerning the healing art." "The Practice of Osteopathy" is this sentiment expressed in irrefutable language. The clear print, the plain language, and the numerous illustrations give no

hint of mystery and will be readily understood by any ordinary layman.

A GENIUS FOR WORK IS THE SECRET OF SUCCESS.

"SLAVES labor and are accursed, lazy men labor and are despised, great men labor and are honored." Honest labor is the motive-power of race progress. But, just as the labor of the rear hinders advance by its dishonesty, the labor of the van stimulates the forward movement by being something more than honest—by being intelligent. Intelligent labor looks at its task with a due appreciation of what it means.

The Springfield, Mass., *Union* has this to say about the right way to work:

A genius for work is the secret of success. The slave works. The tramp works. The genius works. The slave is accursed. The tramp is despised. The genius is honored.

How can it be that work seems to be so different, when viewed from different points? Can the same thing be honorable, despised, accursed?

To the slave, work is toil, because he is driven to a task by a force outside of himself. His work is not of himself and for himself. Others seize the product of his labor. His mind does not comprehend the significance of that which his hands perform, and his heart is not in his work.

Slavery was not wholly abolished when Lincoln signed the proclamation of emancipation nor when the Thirteenth Amendment to the Constitution was ratified. Work devoid of intelligent interest and with no adequate remuneration for the workman is in reality slavery. Slaves of all colors are yet to be found bound to their tasks. No slave counts work a blessing.

There are other tramps besides those poor creatures who travel through dusty highways from pillar to post, working their way on a never-ending journey.

There are more than sixty thousand persons tramping from the cradle to the grave, seeking, day after day, the elusive soft snap that shall afford a living without working for it. Their only object in life is to have a good time.

The true man is he who knows that labor is divine. The source and inspiration of effort lie within himself. He sets himself to work. He is his own employer.

He forms a purpose; he chooses an end. It is his joy to plan his work and then to work his plan. His work is the expression and outgoing of himself.

He never sacrifices himself for his work, for were the artist dead, where were the picture?

He never wastes his energies in dissipation, but his genius for labor is also a genius for rest.

His holidays are for recreation in the real sense of the word. He re-creates enervated tissues, takes a new breath, strengthens his mind, gets new inspiration,

discovers fresh motives, that he may come back to his work a better and a stronger man, fertile in resources, full of zeal, abounding in enthusiasm.

The man who has a genius for work so masters his work that the more he works and the better the product of his industry, the greater and better becomes the worker.

The work that degrades the workman, the work that belittles the soul and weakens the body, should never be wrought.

A man's work should be so chosen and so performed that at the end of each day's labor the laborer himself shall be the better for his effort. When at the end of each working day not only shall be increased the material wealth of our nation, but also shall each workman be the better for his toil, then will our people have solved the great problem of the twentieth century. Let our schools and our colleges send forth graduates with a genius for work. Let our plutocrats be greater than all their millions, then will their wealth become the people's treasure.—*The Scrap Book*.

DON'T YOU?

When the plan that I have to grow suddenly rich
Grows weary of leg and falls into the ditch,
And scheme follows scheme,
Like the web of a dream,
To glamor and glimmer and shimmer and seem,
Only seem;

And, then, when the world looks unfadably blue,
If my rival sails by,
With his head in the sky,
And sings "How's business?" why, what do I do?
Well, I claim that I aim to be honest and true,
But I sometimes lie. Don't you?

When something at home is decidedly wrong;
When somebody sings a false note in the song,
Too low or too high,
And, you hardly know why,
But it wrangles and jangles and runs all awry,
Aye, awry!

And then, at the moment when things are askew,
Some cousin sails in,
With face all a-grin,
And a "Do I intrude? Oh, I see that I do!"
Well, then, though I aim to be honest and true,
Still I sometimes lie. Don't you?

When a man that I need has some foible or fad,
Not very commendable, not very bad;
Perhaps it's his daughter,
And some one has taught her
To daub up an "oil" or to streak up a "water";
What a "water"!

And her grass is green green and her sky is blue blue;
But her father with pride,
In a stagey aside,
Asks my "candid opinion." Then what do I do?
Well, I claim that I aim to be honest and true,
But I sometimes lie. Don't you?
—From "Impertinent Poems," by Edmund Vance Cooke,
in *Saturday Evening Post*.

THE HOME WORLD

FARMERS' GIRLS

J. G. ROYER

I WAS once "a farmer's boy" and grew up among farmers' girls. I went to school with them and played with them. In the red schoolhouse near the cross-roads we used to sing a song entitled "The Farmers' Girls." The song ran thus:

"Up in the early morning,
Just at the peep of day,
Straining the milk in the dairy,
Turning the cows away;

"Sweeping the floor in the kitchen,
Making the beds up stairs,
Washing the breakfast dishes,
Dusting the parlor chairs.

Chorus.

"Oh, how merry the lay, as light and gay,
We sing of the farmers' girls!
Hurrah! how merry the lay we carol today,
Of the merry farmers' girls.

"Brushing the crumbs from the pantry,
Hunting for eggs at the barn,
Cleaning the turnips for dinner,
Spinning the stocking yarn;

"Spreading the whitening linen
Down on the grass below,
Ransacking every meadow,
Where the red strawberries grow.—Cho.

"Starching the 'fixin's' for Sunday,
Churning the snowy cream,
Rinsing the pails and the strainers
Down in the running stream;

"Feeding the geese and the turkeys,
Making the pumpkin-pies,
Jogging the little one's cradle,
Driving away the flies.—Cho.

"Grace in every movement,
Music in every tone,
Beauty of form and feature,
Thousands might covet to own;

"Cheeks that rival spring roses,
Teeth the whitest of pearls,
One of these country maids is worth
A score of your city girls."—Cho.

How happy farmers' girls ought to be in their youthful country life as set forth in the song! Such home-bringing-up, be it on the farm or in the country town, are the first steps leading to a life of honor and usefulness.

Such habits of industry and punctuality and household knowledge give vigor to body, freshness to thoughts, purity to actions and a large supply of good common sense. It is cultured development like this that prepares both country and city girls to become not only prosperous bread-winners and bread-savers, but good wives, good mothers, and good home-makers as well. In these days too many mothers cook and sweep, labor and toil early and late, many of them wearing the shoes and dresses cast aside by the daughters, while the daughters, if not lounging abed, are spending the morning hours reading novels and the like. These mothers permit the girlhood of their daughters to slip by without accustoming them to the care and responsibility so essential in laying the foundation for the comfort and happiness of the daughters in later years.

Our best young men,—honest, pure young men, in possession of the best judgment and real culture,—come from the farm. These young men would rather have for wives, women who have been thoroughly and practically educated in the home. They want for wives, women who have mastered the fine arts of cooking and gardening, and who know for themselves that one of the first accomplishments in a woman's education is to be able to make a loaf of good bread, cook a good dinner, and keep a house in proper order.

Delight in domestic duties is an indispensable characteristic in a good wife; and every young woman should constantly keep alive an ambition to become an honored and admired wife and home-maker. To do this, she should begin when a little girl to take an interest in the home duties.

NURSING.

FLORA E. TEAGUE.

SOMETIMES I wonder why more of our young sisters who are so well adapted to nursing and caring for the sick do not take up this occupation. It is surely one in which splendid opportunities are afforded for work for the Master. It seems to me that no one can be truly a good nurse without a big spark of the divine nature. No one who has an antipathy for the work in any sense ought to enter into the profession of nursing. But there are so many born nurses, who with a course of training could become such excellent ones.

The field for employment is vast and it will be a long time before the supply is equal to the demand. Not only are opportunities for Christian work good, but wages are very good. It is true that the profession has its disadvantages as every other profession has, but nurses are needed and some one must prepare. None could be better for this occupation than our Spirit-filled young sisters. If you have good health and strength and an inclination or talent in this direction, why not cultivate it? Should you not care to do public nursing, what a blessing you could be to your own family did you possess a professional knowledge of nursing.

Consciousness of the help you are to others would afford a deep satisfaction. While many patients are seemingly very ungrateful and trying, yet they can not help but love you for your loving service. Give these ideas a thought at least.

**SHREWD FINANCIERING.**

"THESE great financiers are deserving of our praise," declared the speaker of the evening. "They have made possible giant business enterprises. We may deride them now, but future generations will revere the names of Rockefeller, Morgan, Carnegie and oth—"

"Pardon me," interrupted a little woman in the audience. "But you have not named the greatest financiers of this generation."

"Ah, I would be glad to hear you suggest the names of greater ones," said the speaker.

"I will not call the names, for there are too many," replied the little woman, "but I'll tell you who they are. They are the hundreds of thousands of women, wives of workingmen whose average wages are less than \$450 a year. Such able financiers are they that they are able to give their children nourishing food, pay the rent, buy fuel and educate the children, clothe them and give them medical attention, and fit them for noble citizenship—and all on a paltry sum that is mere weekly pin money for the wives of men you named. I claim that the women I mention are the ablest financiers in the country. If they were not, the privation

that is already too prevalent would be woefully greater than it is."

And all the cheering that followed was for the little woman and her kind, and not for the orator and the financiers he named.—*Selected.*

**THE POTTER.**

The potter stood at his daily work,
One patient foot on the ground;
The other with never slackening speed
Turning his swift wheel round.

Silent we stood beside him there,
Watching the restless knee,
Till my friend said low, in pitying voice,
"How tired his foot must be!"

The potter never paused in his work,
Shaping the wondrous thing
'Twas only a common flower-pot,
But perfect in fashioning.

Slowly he raised his patient eyes,
With homely truth inspired;
"No, ma'am, it isn't the foot that works,
The one that stands gets tired!"

—*Selected.*

**WITH THE BITTER DOSE.**

WHEN obliged to give a child a nauseous dose of bitter medicine, always make it as easy as possible for the child to swallow it.

A single drop of oil of cloves can be placed on the tongue, and, while it burns a little, it effectually destroys the sense of taste for the time being, and the medicine is easily swallowed without any trouble.

Sour articles are "tasted" with the tip of the tongue, while any bitter taste is at once perceived at the back of the tongue. For this reason sour liquids can be taken by placing the spoon into the mouth until the middle of the tongue is reached.

For the bitter doses, beside the oil of cloves, one can squeeze two lemons into half a glass of hot water and take a swallow just before taking the medicine and immediately afterwards.

A hot drink of any kind relaxes the muscles of the mouth and throat and makes the act of swallowing easy, while a strong flavor of any kind will drive another "taste" from the mouth. A few spoonfuls of steaming hot peppermint tea, sweetened with a little sugar, will do wonders toward making medicine easy to swallow and in obliterating the taste afterwards.

While the drop of oil of cloves is the best thing in the world to make a spoonful of castor oil possible without an exhausting struggle between mother and child, in which both lose their temper and actual cruelty is often done, a slice of lemon, dipped in sugar and sucked slowly after the oil is swallowed, will remove any which stays on the roof or sides of the mouth.—*Selected.*

A MORNING TONIC.

TAKE a pint of hot water, squeeze into it the juice of one lemon and season with a half teaspoonful of salt. Drink slowly half an hour before breakfast for two weeks at a time. This will clear a coated tongue, tone the stomach and act directly upon a sluggish liver. If kept up for three months, every alternate two weeks, it will wonderfully clear the complexion.—*Selected.*

COOKING MACARONI.

MACARONI is now regarded as being, weight for weight, of not less value in the animal economy than beef or mutton, and it offers an excellent substitute for meat, and at the same time meets the need of vegetables. To cook it properly, at least two quarts of salted water should be used for each one-fourth pound of macaroni, which is enough for six persons. The pipes may be broken in short pieces, or put into the water whole; the water should be salted as for the table, and should be boiling hard. Italians cook it twenty minutes, but the American cook usually gives it thirty to forty minutes. Stir it now and then to prevent sticking, cooking until it is tender; when tender, turn into a colander and drain, pouring cold water through it to blanch it and wash off the starch which gathers on the surface of the pipes. This is the preliminary preparation for all macaroni dishes. If it be merely seasoned at this stage, with butter and a little salt if necessary, it is called boiled macaroni.

Macaroni with cheese: Melt two tablespoonfuls of butter, grate four ounces of cheese (about eight tablespoonfuls after grating), to one-fourth pound of boiled macaroni. Grease a baking dish, cover the bottom with macaroni, pour over it a little of the melted butter and sprinkle with grated cheese, continuing thus until all is used, having the last layer cheese; brown in a quick oven and serve hot from the same dish it is cooked in. Slow cooking dries and makes the macaroni indigestible.

Macaroni a la creme.—Put two cupfuls of milk to boil in a double boiler; rub together two and a half tablespoonfuls of butter and the same of flour, until smooth; add this to the hot milk and stir until it thickens, salt and a dash of pepper to taste. Place in alternate layers the boiled macaroni (one-fourth pound), sauce and finely chopped American cheese, in a baking dish, and sprinkle the top with cracker crumbs and brown. Serve hot from baking dish.

Macaroni with Tomato Sauce—Break half a pound of macaroni in pieces, put into a sauce pan with plenty of boiling, salted water, and cook until tender; melt a tablespoonful of butter in a saucepan, chop a slice of onion and a small bunch of parsley and stir in the butter; let simmer until the onion is brown; add a pint of chopped tomatoes and let boil half an hour, then take up, strain through a wire sieve, put into a clean

saucepan and set over the fire to boil until thick; season with salt and pepper; drain the macaroni, put a layer of macaroni in the bottom of a baking dish, cover with the tomato sauce, put more macaroni and sauce in layers until the dish is full; put bits of butter on top, and set in a hot oven to brown; serve hot.—*The Commoner.*

TO FRESHEN ORIENTAL RUGS.

A MIXTURE of borax, ammonia and water is excellent and will not injure the rugs. To one pint of water add two tablespoonfuls of powdered borax and one tablespoonful of ammonia, stirring well. Apply while the water is warm with a small brush, rubbing against the nap. When the entire rug has been gone over wipe in the same direction with the nap with a soft cloth which will not lint. Then brush with the nap, using a dry brush. After this treatment the rugs will be silky, clear and with a better sheen. This was told me by a native rug dealer, and I have used this method for several years on my Oriental rugs.—*The Delineator.*

SELECTED HOME REMEDIES.

BAKING soda should be kept in the house if for no other use than as a remedy in case of scalds or burns. Apply cold water to the burn first, then sprinkle thickly with soda.

FOR earache, a remedy that never fails, a pinch of black pepper gathered in a bit of cotton batting, wet in sweet oil and inserted in the ear will give immediate relief.

WHEN you first feel a sensation of pain in the fingers that may seem a felon, at once put rock salt in the oven, pulverize it and mix with equal parts of turpentine. This mixture applied frequently will destroy within twenty-four hours even a felon that has made some headway.

CATARRH is not considered curable, but may be relieved by a mixture of sweet cream and powdered borax snuffed up. Meat, particularly pork, aggravates the disease.

It is said that the soda bath is a specific for rheumatism, besides rendering the skin soft and supple. One pound of washing soda is added to a tub of hot water, and the patient must lie in this for fifteen minutes; then follows the cold spray, and the bather emerges with every trace of her aches and pains dispelled.

“WHEN gluing an article use glycerine with it, in the proportion of one part to four parts glue, and the article glued will never break off.

"To make a ventilator at either top or bottom of a window, take a half-inch board eight inches wide and an inch shorter than the space inside the window frame; screw small brass or iron eyes into the ends of the board three inches from one edge; screw corresponding hooks in the window frame a little way inside the sash. When the air is needed, either raise or lower the sash six inches, then set the board over the opening. The eyes fitting over the hooks will hold it fast, and the intruding air gives it a slight slanting inward. No direct draft is possible, but fresh air will come in plentifully."

"Two Things for the Sewing Machine Drawer.—Always keep a small slip of white paper and a magnifying-glass in the sewing machine drawer. If the machine is in shadow, slip the piece of white paper behind the needle and then hold the magnifying-glass at the right angle between the eyes and the needle. The threading hole will come out into perfect distinctness and the needle can then be threaded with ease."

The Children's Corner

WHERE WAS THE PUMPKIN?

LILLIAN M. WIRE.

IN a tiny envelope, from far-away New York, a pumpkin-seed was sent to Grandma.

"It is from my old home," she said. "We'll plant it in the sunniest place in the garden and where the soil is the richest. Now remember," Grandma concluded, "don't anyone touch my vine when it grows. We'll see how many pumpkins there'll be this year."

For Grandma was sure that the seed would grow. And she was right, for it was not long till the large leaves could be seen, and then by and by the green pumpkins. They were tiny at first but grew larger every day.

Earl, the little grandson, was not present to hear the warning about the vine, but he should not have acted as he did. One day he and his chum went up to Grandma's. The boys rang the bell, but there was no answer.

"There's no one at home, I guess," Earl said, as he led the way to the garden. "Ain't my grandma got a nice garden?" asked Earl.

Mrs. Wilson always took great pride in her garden and there was scarcely a weed to be seen.

When Earl's chum spied a pumpkin, he called: "Oh! let's make a jack-o'-lantern. Your grandma won't care; there'll be some left then,—all she'll want, I should think."

So the pumpkin was speedily cut from the stalk and the boys hurried home with their treasure. They hung the jack-o'-lantern on the porch that evening and Mama said it was beautiful. But some way Earl did not enjoy it as he had thought he would.

"Taint half as much fun as last year," he said to himself after he had bidden his guests goodnight. "Maybe Grandma won't like it. She's always been good to me and it was a mean trick to take any of her things." The moon seemed to gaze at him reproachfully as he stood at his window.

When Grandma returned home, she counted her pumpkins carefully, but one was missing as we have seen. She mourned the loss of her mammoth vegetable but could not imagine where it had gone until the following day, Earl's mama was telling about her son having had such a fine time the night before with a jack-o'-lantern.

"Where did he get the pumpkin?" asked Grandma.

"Why, I don't know," her daughter answered innocently. But an hour later, Grandma knew and Earl confessed that she was right. For, looking about the garden after hearing of the boys' visit, she found a small handkerchief with her grandson's initials upon it. She also found in the arbor with the handkerchief, a portion of the stolen property that the boys had cut out to test it.

How Grandma stared when she found these proofs of the children's guilt. After thinking carefully for a few minutes, she sent for Earl.

"Is this your handkerchief? How did it get in my garden? I have not taken you out there lately."

Earl looked bravely up at the stern face before him. He meant to be a soldier some day. "Grandma," he began, "I took the pumpkin the other day, and—and—I'm sorry. I didn't 'joy it at all, 'cause I knew it was mean to steal it," flushing hotly. The tears were ready to fall, but Earl would not let anyone see him crying.

"If you had asked me for the pumpkin, Sonny, I'd have given it to you. But I'm glad you did not tell a lie about it. You thought I wouldn't know, but 'thy sin will find thee out.'"

"I won't never do so again, Grandma," Earl said earnestly as he started for home.

"You and your chum come over to dinner tomorrow," Grandma called in token of forgiveness.

The boys came and at each plate they found a saucer-pie nicely browned.

"What kind is it?" asked Earl smiling a little.

"You can tell by the looks, Dearie, and I guess I'll have plenty of pumpkins for pies after all."

"You shall have more of 'em for pies next year if nothing happens," Earl's chum declared while the trio was served with the dessert.

THE QUIET HOUR

ALL'S WELL THAT ENDS WELL.

PAUL MOHLER.

WHEN Balaam the soothsayer undertook to curse Israel, God gave him a message of blessing instead. His first message closed with the words, "Let me die the death of the righteous, and let my last end be like his."

There is a good deal to think about in that.

We are so used to judging by appearances, without looking at all of the facts. I have known Christian people to become discouraged because the wicked prospered. Did it ever darken your thoughts to see a hard, profane, Sabbath-breaking, unbeliever raise good crops every year when your own were poor? Does it seem wrong for him to have such good health, when your own is poor? Doesn't it look sometimes as though the wicked really prospered more than the righteous? And isn't that wrong?

Well, but hold on a minute; you haven't all the facts yet. Don't decide too soon. You wouldn't judge a man's financial standing so carelessly. You know that a man in business may seem to be very prosperous, while he is really losing money. He may be using up his capital to keep up appearances, while rushing on toward bankruptcy. Anybody with a lot of money can run a big business for awhile, but if he doesn't run it rightly on good sound business principles, his failure is sure; it is only a question of time. How much better it would be for him to have a little money in a little store, running it conservatively and making a little money all the time, so that when he should be old, he could retire with enough to keep him comfortable.

Well, that is the way with living. Many a man is using up his capital (time, strength and talent) all to no profit. He seems to be prosperous, but he is not. He is not laying up a thing for the future. When his capital is gone, he will be closed out—a bankrupt; and he is using it up fast. Do you call that success? Well, I don't, and I don't care how hard he is working at it, if he isn't living according to sound principles of life, building up a Christian character, and laying up some treasure in heaven, his life is a failure.

Now God knows how a man should live. If he doesn't, who does? He knows what kind of a life is a success, and what kind will end right. Fortunately for us, he has spoken on that question several times. The

words quoted at the beginning of this article are on this very subject. "Let me die the death of the righteous, and let my last end be like his." That means simply that the righteous man is succeeding. He may be tugging pretty hard now, but he is sure to come out well in the end. He is going to retire from earth with a competency. His spiritual life will be strong enough to enter the larger sphere, and his heart will rejoice in the light of God's presence. Isn't that success? Isn't that worth while?

Did you ever read story books? Well, I used to. What kind of stories do you like? I like the kind that end well. I don't care how hard a time the hero has in the first chapter, just so he comes out ahead in the last. I used to look at the last chapter first sometimes, just to make sure that it was a story I wanted to read, and what a satisfaction it was all the time, when the villain was having everything his own way, to know that he would get his reward in the last chapter, and the hero would get his.

Well, that is the kind of story I want my life to be; I want it to end well. I shall try to be patient through all the hard chapters, trusting God for a happy conclusion.

Yes, all is well that ends well; and all ends well that God directs.

Bethany Bible School, Chicago.

"FILLED WITH GOODNESS."

("The earth is full of the goodness of the Lord."—Psa. 33: 5.)
The earth is filled with goodness, with the goodness of the Lord—

His power and tender watchfulness all nature's books record;

The lily shows his constant care, the sparrow chirps his praise,

His life we breathe each fleeting hour; his mercy crowns our days.

No need to read on printed page the fact that God is good,
When all pulsating life below proclaims his Fatherhood.
His goodness and omnipotence, the wonders of his love,
Alike are shown in earth beneath and in the heavens above.

We view the myriads of stars in never-ending space—
What other power, what Hand but his, could keep them in their place?

And yet that Hand which holds the worlds has never yet forgot

To form one bladelet, or to paint one wee forget-me-not.

The humming bees, the feathered minstrels with their warbled songs,
 Unite in sending praise to him to whom all praise belongs;
 And of his all created works shall man alone be dumb,
 In silence taking all his gifts, nor think how great the sum?

Or if perchance he speaketh, is it of God's love to tell,
 To offer thanks to him, all-good, who doeth all things well?

Nay, speaks he not far oftener of how ill the world is run,
 Enjoying not the light because of spots upon the sun?

There's not a breeze that fans our cheeks, nor zephyr, sweet and mild,
 But whispers, God is living still, and caring for his child.

Oh, for an ear attuned to hear the symphony divine!
 Oh, for an eye to see the good, albeit it rain or shine!

The earth is filled with goodness—not a little here and there,
 But over all, and they who will may see it everywhere.

And that we look at we become; then breathe the goodness in!
 Beholding good, oh, think you not 'twill work a change within?

The earth is filled with goodness—in the land, and sky and sea—
 And this same goodness all around is shown to you and me.

The earth is filled with goodness, with the goodness of the Lord;
 May we; too, learn, as nature does, to him all praise to accord!

—Pearl Waggoner, in *Lifeboat*.

THE MARKS OF A MISSIONARY PASTOR.

At the Laymen's Missionary Convention in Toronto, Dr. Gandier, the new principal of Knox College, gave the marks of a missionary pastor as follows:

1. He is intensely interested in missions himself. No man can interest others in a thing in which he is not himself interested, and a congregation soon knows what their minister is really interested in.

2. He regards his whole congregation as a missionary society, whose duty and privilege it is to spread the Gospel.

3. He sets and maintains a worthy standard of giving.

4. He gladly obtains and makes use of outside help, visiting missionaries and workers. Some pastors stoutly protect their pulpits from these appeals. They fail to see that, if the congregations were brought into touch with larger things, they will increase gifts in every direction.

5. He keeps his congregation in touch with movements of the age, and sees that they are not left out of the Providential movements of the times.

6. He introduces the best methods of giving.

7. He has faith in his people and in what they can do. In introducing missionary work the hindrance is

often in the pastor and session. When you get past them there is no trouble with the people.—*Selected*.

WHAT YOU CAN DO.

"I THINK a Christian can go anywhere," said a young woman who was defending her continued attendance at some very doubtful places of amusement.

"Certainly she can," rejoined her friend; "but I am reminded of a little incident that happened last summer when I went with a party of friends to explore a coal mine. One of the young women appeared dressed in a dainty white gown. When her friends remonstrated with her, she appealed to the old miner who was to act as a guide to the party.

"Can't I wear a white dress down into the mine?" she asked, petulantly.

"Yes'm," returned the old man. "There's nothin' to keep you from wearin' a white frock down there, but there'll be considerable to keep you from wearin' one back."

There is nothing to prevent the Christian's wearing his white garments when he seeks the fellowship of that which is unclean, but there is a good deal to prevent him from wearing white garments afterwards.—*Sel.*

AN EVIDENCE OF SANCTIFICATION.

IN proportion as the heart becomes sanctified, there is a diminished tendency to enthusiasm and fanaticism. And this is undoubtedly one of the leading tests of sanctification. One of the marks of an enthusiastic and fanatical state of mind, is a fiery and unrestrained impetuosity of feeling; a rushing on, sometimes very blindly, as if the world were in danger, or as if the great Creator were not at the helm. It is not only feeling without a good degree of judgment, but, what is the corrupting and fatal trait, it is feeling without a due degree of confidence in God. True holiness reflects the image of God in this respect as well as in others, that it is calm, thoughtful, deliberate, immutable. And how can it be otherwise, since, rejecting its own wisdom, it incorporates into itself the wisdom and strength of the Almighty?—*Thomas C. Upham, in The Interior Life.*

IN grace you can be under bonds, yet not in bondage. I am in bonds of wedlock, but I feel no bondage: on the contrary, it is a joy to be so bound. The bond of grace is a marriage bond, uniting us to him whom we love above all, even the altogether lovely Bridegroom of our souls.—*Charles Spurgeon.*

ECHOES FROM EVERYWHERE

The Danish Good Templars are circulating a petition for total prohibition in Denmark, and at last reports had secured 446,000 signatures, or about fifty per cent of the total adult population.

A number of Philippine products are being used in finishing up the new executive offices connected with the White House. Philippine woods will be used for the floors and cabinet work and white buffalo hide to upholster the chairs. President Taft has taken a great interest in the islands ever since he was governor.

Pennsylvania is taking the lead of all the States in forestry. Large tracts of land, mostly in the mountain regions, have been purchased by the State and made into forest reserves, and though the institution is just in its infancy it promises great things. A free forestry school is carried on by the State college, and about 10,000,000 trees a year are now being planted.

During the Hudson-Fulton Celebration week, the Interborough Rapid Transit Company of New York City carried in the course of one day 2,200,000 persons without accidents, blocks, or other detriment to its service. The traffic was about equally divided between the elevated roads and the subway. Considering the crowded condition, this is a truly marvelous feat of city transportation.

The Harvard University corporation has received from Mrs. Edith F. Perkins of Burlington, Iowa, widow of Charles Elliott Perkins, for many years president of the Chicago, Burlington and Quincy Railroad, a gift of \$30,000 to be held in trust for the establishment of scholarships at the institution in memory of her husband. The scholarships are to be given only to graduates of schools and colleges in Iowa. The gift, it is understood, will be accepted.

At last the Atlantic has been crossed by a steamship at a speed of over 26 knots an hour, the "Mauretania" on her last trip to the westward having covered the course from land to land in 4 days, 10 hours, and 51 minutes, at an average of 26.06 knots, reducing her last record trip to the westward by 44 minutes. Although she did not reach her highest previous day's run, she maintained a steady high speed on every day throughout the course.

The Pullman company must put into effect a maximum berth rate of \$1.50 and a maximum seat rate of one-half cent per mile by November 15 or the Kansas State board of railroad commissioners will begin proceedings to compel these rates. The board has served notice on the company for a reduction in the rates from \$3.50 to \$1.50 for a berth for one night. The reason for the action was that the company had put in these maximum rates in Oklahoma recently.

A careful record is kept of the persons killed in India by wild beasts, etc., each year. The figures for the last year have just been given out and they are appalling. Here they are: number killed by snakebites, 21,400; by tigers, 800; by other wild beasts, 1,200; total, 23,400. There were also about 100,000 cattle reported killed by beasts and snakes. A large part of these sacrifices is chargeable to the Hindu religion and customs, which forbid the people to take the life of animals.

The Commonwealth Edison Company of Chicago has been most successful with its plan of introducing electric flatirons. Ten thousand 6-pound irons were distributed up to March last on loan for six months without charge. At the end of that period the used irons were offered for sale at a reduced rate to the users, most of whom were only too glad to retain the irons at so low a price, while the demand for used irons returned has been greater than the company can supply.

After visiting the school lunchrooms conducted by the board of education at the high schools of St. Louis and studying the details of their management, Mrs. Ella Flagg Young, superintendent of schools of Chicago, said she was very much impressed with the system and may recommend its adoption in Chicago. By the St. Louis system the food is supplied the children practically at cost. If there is any profit at the close of the term the children get the benefit of it the next term.

The fourteenth annual session of the Illinois conference on charities and corrections, held at Peoria the second week in October, was adjourned after the delegates had elected officers and adopted resolutions endorsing "adult probation," 10-hour factory work for women, medical inspection of public-school pupils, the placing of parole officers under civil service, the establishment of a public epileptic colony, the inauguration of prison reforms and the observance by the churches of the last Sunday in October as prison Sunday.

A traveler in the southwestern part of New Mexico says that he found there a grass which he believes can supply medical science with a narcotic not hitherto known. The natives of New Mexico call it "sleepy grass." Cattle and horses will eat of it the first time they see it, and after eating they will fall in their tracks and remain there in a state of coma for two days. When they recover, they seem to suffer no ill effects from the narcotic, but they will never eat of it again. They run away from it when it is offered to them. The traveler says that the sleepy grass is not to be taken for loco weed, as the grass is a genuine grass and is not unlike Kentucky blue grass in appearance. The loco weed is a plant which bears a flower, and horses and cattle after eating of it become fiends for it and are worthless from that time forth.

M. Dienert, a Paris city engineer, has been making successful tests with a microphone "divining-rod" for locating underground veins of water. By connecting the wires with the soil the operator is able actually to hear the trickle of the water, even to a depth of 50 feet. This was proved in several cases where wells were dug and water found at the indicated spot and depth. It must be borne in mind, however, that such instruments are still in the experimental stage; they do not appear to be on the market.

It is clear that the old-age pension scheme adopted a year ago for the British Isles is going to cost much more than was expected. The total for this year will be about \$40,000,000; the government has a deficit of \$80,000,000 altogether staring it in the face, which it must make up by increased taxation. About 700,000 persons are now on the old-age pension roll; this is 15 out of every 1,000 population in England, and about three times as many in Ireland, so that for once "Ould Oireland" is getting the big end of the bargain.

According to reports from London, fear is openly expressed that the execution of Francisco Ferrer by the Spanish government will inaugurate a period of the most serious social disturbances throughout Europe in which England will herself become involved. The general opinion is that the Ferrer outburst is far more portentous than a series of individual explosions and that it will yet develop into a concerted revolutionary movement. Every gain made by the revolutionary element in Spain only quickens the movement in other countries, thus creating a European menace.

The bureau of fisheries at Washington reports that it has broken all records in the last year by sending out over three billion fish eggs and small fish, for planting in the streams of the country. The cost of this work, which is borne by the government, averages about \$100 per million eggs and fry. About 11,000 different streams were stocked during the year. The usefulness of this work is illustrated in the case of shad; years ago the Sacramento River in California was stocked with shad from the Potomac, but now the Potomac has been fished so hard that the process is being reversed, and shad spawn from the Sacramento is being used to replenish the Potomac and other Eastern rivers. Fish spawn can be had, free, for suitable waters, on application made through a member of congress.

The Mexican congress has passed a bill exempting corn from tariff duty and large quantities will be bought in the near future from the United States. The object of the bill is to relieve famine sufferers. Loss of crops on account of unexpected early frosts and floods which have devastated large tracts of rich farming country, has caused the price of corn to soar and the poorer classes cannot afford to buy it. Tortillas, a cake made from corn, is one of the most important food staples of the peons and the high prices have caused famine conditions in large sections. The government has undertaken to relieve the situation and will order corn imported. This will be sold at and below cost in the districts where it is most needed. The government of the state of Queretaro has announced that it will buy corn from the United States as soon as the exemption of duties on imported corn goes into effect. Local concerns interested in the matter are negotiating with St. Louis firms for large shipments.

The big boost in income from internal revenue continues and the reports received so far indicate to the treasury officials that the internal revenue collections during the fiscal year will exceed last year's by between \$12,000,000 and \$15,000,000.

The State Supreme Court has upheld the Iowa indeterminate sentence law, which provides that judges of the District Court in all cases except murder in the first degree shall sentence prisoners to an indeterminate sentence, the length of which is to be determined by the State board of parole.

The monthly report of the Acting Chairman of the Panama Canal to the Secretary of War, dated September 15, states that during the month of August, the total amount of excavation done on the Panama Canal was 2,755,178 cubic yards, the average rainfall being 9.27 inches. From now on there may be a diminution in the totals of excavation, due to the fact that portions of the canal have been finished, and that as the excavation grows deeper, the number of shovels that can be employed will be reduced.

"Mentiopathy" and telepathy are new devices by which money is obtained from credulous people, according to the Postoffice Department. The department has issued a "fraud order" against John F. Braun and Kate A. Braun, conducting the "Braun Institute of Mentiopathy," the "Braun Health Institute" at Bloomington, Ill., and the "Mo-Bo Herb Remedy Company" and "Manhattan Collection Agency" of Bloomington, Indianapolis and Greenfield, Ind. Persons suffering from any conceivable disease were advised by circulars sent to them through the mails that they certainly could be cured by the Brauns through the use of "Mentiopathy" and telepathy. As much as \$100 a day was received by them in money orders at Bloomington alone.

This is what has happened to the city of Birmingham, Alabama, since the saloons were abolished there: One large railroad system has entered the district. Noticeable improvements in city railway construction have been made. A million dollar hotel has been financed; \$800,000 of the capital being subscribed by eastern financiers. Three new banks were opened for business with a total capitalization of \$300,000. The bank clearings of the city for the seven months show an increase over those of the corresponding period for last year of nearly six million dollars. The postoffice receipts show an increase of 19½ per cent. Building operations amounted to \$1,609,098 as against \$1,251,181 for the corresponding seven months of last year, which is an increase over the highest record in the history of the city of nearly \$360,000.

Unless the words "In perpetuity" are written in the contract not a single perpetual franchise is in existence in Ohio. Hundreds of franchises held by public service corporations in Ohio cities and capitalized at millions are of no specific term. These indeterminate franchises have commonly been called perpetual and have been held to be so in fact, though not in name, by numerous lower courts. The Supreme Court recently swept away all these constructions and held that a franchise contract silent as to time is merely indeterminate and not perpetual, and therefore that such a contract may be ended at any time at the pleasure of either of the contracting parties, the corporation or the people.

Among the Magazines

THE PRESIDENT'S SPEECHES.

If President Taft can accomplish what his speech in Chicago outlined, a radical reform in the practice of criminal law, it will be an achievement of untold importance and will make his a most notable administration. Mr. Roosevelt, whose eye was open to every reform that was within reach of his ken, could not have pressed this reform, for he is not a practising lawyer, but Mr. Taft has seen the evil and has felt the wrong of the present system, and has more than once attacked it.

The facts are as bad as he describes them to be. We have all seen murder cases that have occupied a month of the court's time and cost many thousands of dollars, in which cunning lawyers have worried or wearied the jury into acquittal of guilty men, who would have received the death penalty if they had been poor men, but who escaped because their money could contrive and invent occasions for delay and excuses for crime which would overrule the judge and befog the jury. Hear what the President says:

"The administration of criminal law in this country is a disgrace to our civilization, and the prevalence of crime and fraud, which here is greatly in excess of that in the European countries, is due largely to the failure of the law and its administrators to bring criminals to justice. I am sure that this failure is not due to corruption of officials. It is not due to their negligence or laziness, though of course there may be both in some cases; but it is chiefly due to the system, against which it is impossible for an earnest prosecutor and an efficient judge to struggle."

If conditions are as bad as they are here described, and we do not doubt they are, it is the business of those organizations of lawyers who are devoted to the real achievement of justice to urge on our American Bar Association and our State Legislatures such reforms as will remove this crying evil. To be sure it is the lawyers who have developed the evil and have profited by it, but there are enough patriotic and honest men in the profession to devise and press the needed amendments of procedure. President Taft tells us, what has been often noted, that a trial which here will take weeks if lawyers are well paid, will be finished in England, and with equal protection of justice, in two days. But there the judges have power to control the proceedings before them, to rebuke and restrain counsel, and to help the jury as to facts as well as law.

This is no reform to be accomplished "between the acts"; it will take a long time, but Congress can, after careful consideration, so lay down rules for Federal courts as to provide an example and norm for State courts. If the President will put his legal mind, and that of his distinguished advisers, to this task and not fear to make his influence felt in getting it enacted into law, he will deserve the everlasting gratitude of many a poor man unfortunately brought for trial. If these reforms should

drive some able lawyers into a less lucrative kind of practice, and some disreputable men into the primitive labor of tilling the ground, the world would be better off. One recalls that the head of the most famous firm of criminal lawyers in this city was not so long ago sent to prison for proving too "smart" in his legal practice.

In a subsequent speech, in the very domain of the "insurgents," the President both criticised and defended the new tariff law. He said that the woolen schedule is bad, and at the same time he said that on the whole the act makes a reduction in rates and so measurably keeps the promise of the Republican platform. To veto the bill would have been unwise, and now we may expect the tariff to stand unchanged for some years, for fresh amendments would, he says, greatly disarrange trade. We agree that he did right in signing the bill, and we do not expect speedy revision. Certainly in some schedules, and those of importance chiefly to manufacturers who want cheap raw materials, there has been a considerable reduction, in good part through the intervention of the President, but we fail to see any such considerable relief as the party pledge promised. The trouble is that the new tariff, like the old, was constructed not to benefit consumers but to benefit manufacturers; to raise the price of commodities for the help of the seller, and not to reduce the price for the benefit of the consumer. The ultimate end of all trade and business is the advantage of the consumer, not of the producer, although both are to be helped together. We have now very far from a scientific tariff law, and shall not have until our new tariff commission has been long at work.—The Independent.

THE SCREAMING EAGLE.

Americans do not always take the initiative in new lines of human endeavor, but after they become interested they are not usually long to be found in the background. In anything except politics we can compete with any nation of the world or with all of the nations of the world. We are very young as a people, but we have associated with our older sisters long enough to have learned that the way to get results is to work and study diligently.

Men were attempting to sail the air in balloons and other air craft years before the Declaration of Independence was signed, but today no computation of progress in either of these branches of aviation is accurate unless it includes a record of what American investigators, experimenters and inventors have done and are doing. A few weeks ago an international contest for heavier-than-air flying machines was conducted at Rheims. There were numerous entries from Germany, France, England and other European nations, as well as three or four entries from the United States. France expected to capture the honors, but expectation fell short of becoming realization because Glenn Curtiss, an American, was one of the contestants. Mr. Curtiss won.

More recently, the International Aero Club held, in Germany, its annual balloon race for the James Gordon Bennett cup. There was only one American entry. Edgar Mix of Columbus, O., found that upon his shoulders rested the responsibility for creditably representing Uncle Sam. He sailed 700 miles and remained in the air about 40 hours, during most of which time he was passing through storms and suffering from extreme cold—but he won.

The history of the quest for the north pole carries us back for centuries. The roll of the men who have braved the frozen north in search of this coveted goal would occupy a page in this newspaper and on it would be represented nearly every civilized nation of the world, but the pole remained undiscovered until an American found it.

To Americans also the world is indebted for the locomotive, the steamboat, the ironclad warship, the cotton gin, the telephone, the telegraph, the phonograph and for a great many of the other modern conveniences. Although young, we have developed a literature and have given to the world a number of masterpieces of art. It is true that American ingenuity has largely exerted itself in directions that gave promise of returning financial profit, but the mad scramble for the Almighty Dollar will some day cease to interest us, and then—well, then the old world will do well to look to its laurels in science, art, music and literature. We are just beginning to realize that these avenues for endeavor are open to us.—*Woman's National Daily.*

WHERE PIONEERS ARE "BOOSTERS."

In his article on "Making the Homes of the New Northwest," which appears in *The Delineator* for October, F. G. Moorhead says:

Homes are to be had for practically all who apply, and hardships and high prices do not and should not count in the face of independence and future prosperity. Public lands in the United States, subject to entry and settlement, amount in area to twenty-three times all the acres devoted to all agricultural pursuits in Iowa, the greatest agricultural State in the world. Were all the acres tillable, no less than four and three-quarter million families might receive their allowance of one hundred and sixty acres and independence. Each year the population of Trenton, New Jersey, or Oakland, California, finds homes in the new Northwest, and still public lands remain to supply one hundred and sixty-acre homes to every man, woman and child in New York City and Philadelphia combined.

The terms are easy, yet harder than they were. It is now necessary to make one's residence on the homestead fourteen months before securing permission to commute, and by paying a small amount receive patent to the land. A short time ago the residence requirements were eight months. The price asked is small, from fifty cents to a few dollars an acre, with time allowed in which to make the payments. Or one may live on the land continuously for five years and cultivate it and so get it free of cost.

Each day of the year a heavily laden train comes to a halt in western Canada and pours forth its cargo of eager-faced homesteaders. Sunny Alberta, prosperous British Columbia and unpronounceable Saskatchewan, to say nothing of unspellable Assiniboia, have been in their dreams for months, perhaps for years; at last they have been reached.

Poverty is behind these homeseekers, a few more days and, looking over the rolling prairies, they will be monarchs of all they survey. The reversed train disappears over the eastern horizon, but there is no regret. They have come into the Promised Land. Seventy-three thousand of them made the trip and took up homesteads last year. That means one thousand two hundred coaches filled to capacity, each day of the year a train of four cars filled with hopeful humanity.

Faith in the future, that's the key-note. Every mother's son and daughter of the one hundred and fifty thousand who went into the new Northwest last year are boosters. It doesn't matter that the summers are dry, the winters wet; a balmy Chinook makes them forget their troubles, the sighing of the wind through the pine trees is music for their perturbed spirits. It doesn't matter that the nearest neighbor is five or ten or forty miles away, with only an indistinct trail between. It doesn't matter that they pay sixty cents a dozen for eggs in winter, and that creamery butter costs fifty cents a pound; in a couple of years they'll be producers instead of consumers, and opportunities exist without number to double one's capital.

Catch one of these homesteading schoolma'ams or stenographers or housekeepers off guard, she'll admit there are hardships. The sod house or slab shack is not modern in any respect; there are no faucets to turn for hot and cold water, no enameled bathtubs. The homesteaders are lucky if they do not have to haul water. When it comes to paying three dollars a foot for boring wells, one has to think twice and try the divining-rod several times.

But if necessities are lacking, there are luxuries, and they go a long ways. In one corner of the shack or cabin is a Harvard or a Wellesley pennant, better company than a hot-water faucet any day. And the books and magazines and newspapers! Some of the homesteaders didn't know the Atlantic fleet had left Hampton Roads until it was half way to the Horn, but news is news when it's first heard, no matter how old it may be.

ABOUT MONEY.

(Continued from Page 1041.)

Chocolate is still used in the interior of South America for money, as are cocoanuts and eggs.

Iron spikes, knives, and spear-heads, and brass rods are used as a medium of exchange in certain parts of Central Africa.

The archaic Greek money was in the form of thick, round lumps of metal, stamped with the given value.

According to Adam Smith, it was not so very long ago that nails were used as a subsidiary coin in Scotland.

Whales' teeth are used by the Fijians, red feathers by some of the South Sea islanders, and salt in Abyssinia.

The old Chinese gold coins were in the form of cubes, while the bronze coins were shaped like knives and mining tools.

Among some native Australians greenstone and red ochre formed the currency.

In the early colonial times of 1652 tobacco and tobacco receipts were legal tender; corn and beans and codfish were also employed.

The small, hard shell known as the cowrie is still used in India, the Indian islands, and Africa as the purchasing power.

According to Prescott, the money of the Aztecs and the kindred nations consisted of quills filled with gold dust and bags of chocolate grains.

Before the introduction of coined money into Greece, skewers and spikes of iron and copper were currency, six being a dram or handful.

The Carthaginians had better money. Barbarossa, during his fight with Milan, in 1158, issued leather tokens, and so did John the Good of France in 1360.

In the British West Indies, pins, a slice of bread, or a pinch of snuff have all a purchasing power, while on the African coast axes are the accepted currency.

In 1652, during the early colonial times of America, musket-balls passed for change at a farthing apiece, and were legal tender for sums under a shilling.

Wampum was the strangest currency of all. It was the shell bead money of the Indians, and was soon accepted by the New England colonists as a convenient token in all dealings with the Indians.

The strangest coin of all, though, was the ideal money spoken of by Montesquieu as being found in certain parts of Africa. It is an ideal money called "maconte," but is purely a sign of value without a unit.—*Selected.*

DOG EARNS OWN LICENSE FEE.

MAX, a black-and-tan dog owned by Charles C. Fitzhugh, a pharmacist of Flint, Mich., has come through with a dollar to pay his annual license and thus insure safety from the city dog catcher for another year. And Max earned all this money himself.

In the rear of the store where his owner works Max, who is a trick dog, has a box half filled with excelsior, in which he hides pennies and nickels earned by doing tricks. When a customer comes into the store the dog starts his repertory of stunts, plays dead, walks lame, says his prayers, "talks" to the best of his ability, walks erect on his front legs and then on his hind legs, sits up and does numerous other tricks for the entertainment of visitors. The majority of the patrons of the store know the dog and always when he has finished his act he is given a penny or a 5-cent piece, which he hides in his box.

Last spring when the animal's owner decided that the license should be paid he sent the dog back to the box time after time until the canine had brought to him a dollar in pennies and nickels, and, placing the cash in an envelope, the owner started for the office of the city clerk, the dog carrying the envelope in his mouth.

Whenever the dog wants a piece of candy from the showcase he gets the money from his box, tramps up to where his master is and exchanges it for chocolates.

There is no particular breed about Max. He was a "tramp" dog and Mr. Fitzhugh took him in, gave him a home and taught him tricks.—Chicago Record-Herald.

Between Whiles

His Feelings.

James, aged six, after having had his first ride on a scenic railway, described his feelings thus: "It made me feel just like I was all gone but my soul, and that was almost tickled to death."—Delineator.

Household Hints.

Do not throw away old umbrellas. By removing the cloth cover and cutting it up in strips you can make a number of dainty neckties for your husband. The ribs properly twisted, and woven together, make a very good rat trap, and the stick, when carefully polished, will do for a cane to present to the clergyman at Christmas.

To keep freckles from showing, get a small paint pot, quart size, and fill with a pink paint carefully matching the tone of your complexion, and with a camel's hair brush paint each freckle out.

Young wives cannot be too often reminded that they should always greet their husbands with a smile. It is safe to say that there is nothing in the world that will more deeply irritate him than this, and it should therefore not be forgotten.

If your lamp wicks give out, a very satisfactory substitute can be made of Irish point lace, or Valenciennes, carefully wound round the wick holder. A knitted necktie will serve the same purpose, but is apt to burn fitfully and give out a pungent odor.—Harper's Weekly.

"Is my son getting well grounded in the classics?" asked the anxious millionaire.

"I would put it even stronger than that," replied the private tutor. "I may say that he is actually stranded on them."—Chicago Record-Herald.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—A few hundred agents to represent us in their home county. We give large commission on Ingle-nook Cook Book, Floral Wall Mottoes, etc. Write for our terms.—Brethren Publishing House, Elgin, Ill.

FRUIT FARM—Fourteen acres at R. R. Depot in town. All in Fruit, Berries, Trees. A bargain. Write for particulars. 500 Baptist Brethren in vicinity.—Alva Y. Cathcart, Bristol, Ind.

Syracuse, Ind., June 1, 1909.

Mr. James Glass, Big Timber, Montana.

Dear Sir: I arrived home day before yesterday, after a most pleasant and instructive visit to your Montana proposition.

I have been on the lands and investigated the irrigation system of Glass Brothers Land Company, and am convinced that the essentials of a very prosperous community are there, namely, plenty of water, rich soil and much sunshine; and I would say that the fine appearance and phenomenal yields of domestic fruit orchards in the vicinity of your lands, which have no spraying or other care given them, lead me to believe that commercial orchards of great value may be grown on your lands; and I would not hesitate to plant quite liberal of the hardier apples, cherries, plums and pears, and smaller fruits in the berry line.

Because of these conditions I hope and expect to be one of the number to possess these goodly lands.

(Signed) EDWARD DEETER.

Mr. Deeter is a noted horticulturist of northern Indiana and is a son of Elder Deeter of the Church of the Brethren.

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful

reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.
"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.
"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

NEFF'S CORNER

Did you notice the three pages of pictures and information about Sinaloa, Mexico, in the 'Nook of Oct. 5? Well, I am planning to be there on the ground in a few weeks and if any of you who cannot go down this fall want some of that cheap land, I expect to be in position to look after the development and cultivation of land for non-residents and can have your land cleared and a crop of bananas ready for you to eat by the time you arrive, if you wish. Or a crop of corn, alfalfa, cane or cotton (or 'most anything else you want) can be started in a very short time. 5,000 acres of the Culiacan Colony lands have been sold to Americans this season and we expect a busy settlement of congenial neighbors there in the near future. Many people are going from southern California into Sinaloa and buying at \$25 per acre as good land in as good climate as they see selling in their own country for more than \$2,500 per acre. They are acquainted with that kind of a proposition and they see that an advance of from \$25 to \$2,500 per acre is likely to be made on the west coast of Mexico in about as short a time as it was made in California. My judgment is that he who secures a block of that land now (you can buy it in blocks of from 10 acres up) will have one of the best investments he ever made. I take it that most Nookers are people "of the right stripe" and I'd like to have a few of you for neighbors. If you want a block of land adjoining me, let me hear from you soon.

Address for the present,
JAMES M. NEFF,
Clovis, New Mexico.

PROMOTION CERTIFICATES

An entirely new and complete line of beautifully illustrated diplomas. Lithographed in black on the very best grade of white ledger stock. Illustrated with

appropriate pictures selected from the old masters. Size, 12x9 1/2 inches. This series consists of eight numbers as follows:

YOUR CHOICE OF LOCATION

"Church Extension by Colonization" is our Motto. We are locating our second Colony, with others to follow in other states in the near future.

COLONY NUMBER ONE

is located in the famous San Joaquin Valley, in "Sunny Stanislaus" county, near the center of California, adjoining the new town of EMPIRE. An organized Church of the Brethren is holding regular services and Sunday school in the new colony.

This location was selected because of its fine climate; snows and thunder storms are unknown there; because of its rich soil and fine irrigation system enable a great variety of crops to be grown; and because the excellent transportation facilities to the nearby markets make it easy to dispose of the products to good advantage.

Alfalfa is cut from four to six times a year, yielding from five to ten tons of hay annually, which sells from \$10.00 to \$15.00 per ton. All kinds of stock, dairying and poultry are handled with profit. The alfalfa remains green all winter.

All kinds of California fruits, nuts, berries and truck can be grown here, yielding good incomes.

A good Dairy Cow will yield about \$120.00 annually.

WHAT OTHERS SAY

A Pennsylvanian who has lived near Empire for five years says: "I am raising alfalfa only; that which was one year old and over, yielded nine tons per acre this year. We have 90 acres in alfalfa and are preparing to seed 100 acres more."—J. M. Bombarger.

A North Dakotan, feels this way. "I will frankly say that the Empire location has more good points

than any thing I ever saw, you should not have much trouble in locating people here, even if prices are a little high.

Personally I am partial to the land around Empire. After about three week's investigation I find the land almost faultless in location, soil, drainage, railroads to markets. It will stand the very closest inspection."

J. W. Beardorf

COLONY NUMBER TWO

This colony is being located near Portage la Prairie, Manitoba, in the great wheat Belt of Canada, about sixty miles west of Winnipeg, the Chicago of Western Canada, a city of over 100,000 population.

Four trunk-line railroads pass through the section in which the colony is located, giving excellent transportation to nearby markets. The raising of stock, wheat, oats, barley and grass are the principal pursuits here. Immense crops are grown annually of these cereals, wheat yielding from 20 to 40 bushels per acre. Lands are little higher here than in the newer sections; wheat brings from 10 to 15 cents per bushel more than in the western provinces. Homeseekers will find it advantageous to investigate our colony propositions here and elsewhere. Write us for fuller information about prices, terms and special rates for homeseekers.

One Dollar Per Year

Indian Summer

RICHARD BRAUNSTEIN

It is a wraith of those dear summer days
When all the woods were garbed in beauty rare
When odorous breezes trickled through the air
In currents cool and in the woodland ways
Fair wildings bloomed through the long sweet days.
When feathered poets from some leafy lair
Poured forth their souls in lyrics; now this bare,
Bare apparition draped in shining haze.

PRACTICAL HELPS FOR RALLY DAY

NEW CELLULOID BOOKMARK

With the words "Rally Day" lithographed on one side of the bookmark; and with a reproduction of the Conquest and United States flags. These souvenirs may be given to members of the school as a constant reminder of the recipient's duties to and

Actual Size

privileges in the school. Many will use them in the Bible in connection with the daily readings and the study of the lesson. Each bookmark has a double silk cord and tassel. Price, 4 cents each; 40 cents a dozen, or \$3.00 a 100, postpaid.

NEW CELLULOID RALLY DAY BUTTON IN COLORS

1

3

Price of either numbers 1, 2 or 3, 20 cents a dozen; or \$1.50 a 100, postpaid.

RALLY DAY INVITATION IN WIRELESS TELEGRAM FORM

Contains a short, crisp, businesslike message, prepared in such a manner as to secure the presence of every teacher or officer, and pupil in addition to the parents and visitors. TELEGRAM FORMS, price, 40 cents a 100, postpaid. SPECIAL TELEGRAM FORM ENVELOPES. Price, 40 cents a 100, postpaid.

NEW CELLULOID FLAG PINS

These pins may be used to stimulate attendance on Rally Day. Distribute them in quantities to all members of the school who will promise to give one to each friend who agrees to attend the Rally Day services, wearing the pins. Organize all those who undertake to give out the pins into two divisions; then see which division succeeds in bringing out the largest number. Let one division use the Conquest flag pins, and the other the United States flag pins.

Price, 30 cents a dozen, or \$2.00 a 100, postpaid.

NEW ILLUSTRATED RALLY DAY INVITATION POST CARDS

For the use of Superintendents and Teachers
Designed to help increasing the attendance

to be sent previous to Rally Day to the members of every class or department, including the CRADLE ROLL AND HOME DEPARTMENT, and especially to those who have been irregular in attendance. Space is provided for filling in the date of Rally Day, and for the signature of the superintendent of any of the various departments, or of the teacher.

ORDER BY FORM AND LETTER.

FORM A. **Post Card**, with the reproduction of the Rally Day bookmark, in colors, containing a printed invitation; but without the name of Teacher or Superintendent, so that either could sign this card.

FORM B. **Post Card**, with the reproduction of Rally Day bookmark in colors. Without any printed matter whatever, so that you can have your own invitation printed on this form.

FORM C. **Plain Card**, same size as forms A and B, but not in Post Card Form. For distribution in the school or by messenger service. With the reproduction of the Rally Day bookmark in colors; containing the printed invitation; but without the

printed name of teacher or superintendent, so that either could sign this card.

FORM D. **Post Card**, Printed in colors, with an original design of an American boy Announcing Rally Day through the megaphone. The wording is brief and to the point; a space is left for the signature of the teacher or superintendent. This would be an excellent card to send to every member of the school, particularly to the Primary, Junior and Intermediate departments.

Price of either Form A, B, C or D, 60 cents a 100, \$2.75 for 500; or \$5.00 a 1,000, postpaid.

Rare Ranch Bargain

IN ORDER TO CENTER OUR EFFORTS UPON THE DEVELOPMENT OF OUR TOWN OF MIAMI AND IRRIGATED LANDS IN MAIN PORTION OF MIAMI VALLEY, WE HAVE DECIDED TO OFFER FOR SALE OUR FAMOUS OLD RANCH HEADQUARTERS AWAY UNDER THE CURRENT PRICE OF SUCH LANDS IN THIS COUNTRY.

The ranch contains about 750 acres of fine, deep, rich agricultural land—forty acres reservoir water right from Farmers' Development Company mammoth irrigation reservoir, 20 acres alfalfa and natural hay land, about 100 acres in all under cultivation; natural hay land watered from floods and by underflow. A large portion of the balance could be placed under irrigation, but is capable of producing as good crops as any lands in the southwest through the natural rainfall. Entire tract fenced with substantial wire fences; crossed by three streams, one of which is the Rayado River. Abundance of fine water all over the tract for domestic purposes and for stock water. An ideal fancy sheep, cattle, mule or horse ranch.

Good well, large cistern, three substantial residences, large commissary house, two good stables, other out buildings and corrals.

Remember this land is a part of the famous MIAMI VALLEY, which is supplied with first-class church and school privileges, ideal climate, beautiful natural surroundings, the finest of people—in short the ranch is situated in the midst of an ideal home land.

\$11,000.00 FROM QUICK PURCHASER WILL TAKE ENTIRE TRACT WITH ALL IMPROVEMENTS, ONE-HALF CASH, BALANCE TO SUIT PURCHASER.

CATCH SPECIAL EXCURSION TO SPRINGER, NEW MEXICO, SEPTEMBER 21ST OR OCTOBER 5TH, VIA ATCHISON, TOPEKA & SANTA FE RWY.—\$30.00 FROM CHICAGO, \$25.00 FROM KANSAS CITY, \$11.65 FROM DENVER.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA, IDAHO, OF SEPT. 30, 1909.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Scam, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 44.

A TRIP DOWN THE MISSISSIPPI

G. WILFORD ROBINSON

THE Mississippi! Who has not pictured to himself a voyage down this mighty stream—the “father of waters.” If you have, your feelings will be indescribable when you find yourself for the first time afloat upon its waters. Here it is in its reality—your boyhood dreams—and you steaming down the current of this lordly stream.

It was late in the afternoon of a beautiful September day when the big packet steamer, the *Columbia*, left port at Davenport, Iowa, for a down-river trip. We were a passenger for the pleasure of the trip and to see some of the scenery of the Upper River region.

Davenport is a city crowning a hill. The Indians have a tradition that Marquette and Joliet camped where the city now stands, in 1673.

We glide along on the smooth waters, pass densely-covered islands which, with the profound silence about us, gives us the feeling of isolation. The tranquillity and quiet of the unruffled evening, with the fast-disappearing rays of the setting sun, produce an enchanting scene which is worth remembering. We did not get to Muscatine in time to see its famous sunset described by Mark Twain in his “Life on the Mississippi.” He says he has never seen any on either side of the ocean that equaled them. You may judge for yourself the sincerity of his remark.

Just before reaching Muscatine we pass Geneva Island, a summer resort for the people of the city. Many nice summer cottages adorn its banks. Muscatine, on the big bend of the river, presented a beautiful aspect with its thousands of sparkling lights. The city sits upon two hills and the valley between. A daylight view from these hills shows a panorama of the country for miles. A view from the boat after we had left showed an illuminated hill.

With an overcoat on we sat on the upper deck watching the river by starlight. A clear starlight night throws such heavy shadows that you think you are almost touching the shore when you are only shaving

the shadow's edge. It is hard to tell the shape of the river on such nights. The pilot *must know* that, also know where all the crossings are. But navigation at night has been made much easier and safer by the government lights along the river. It has stationed lights and located buoys on the dangerous places from one end to the other. Twice a year the government boat makes its trip on the upper river, from Cairo to St. Paul, fixing the posts and furnishing the keepers with supplies.

At a late hour we sought the comforts of our state-room where all was quiet except the throbbing of the engines below. It entertained us only a short time until we became unconscious and were sleeping with the fishes swimming beneath us. When we awoke it was morning and our boat was at New Boston where it had tied up sometime during the night waiting for morning. It was a pleasure excursion and was in no hurry. We had anticipated seeing a sunrise on the Mississippi but the sun was obscured by rain clouds which soon began their drizzly downpour.

Again we move on down the river. After a light breakfast we are ready for the sights along the way. The turbid waters attract our attention. We do not wonder at Captain Marryat naming the river “The Great Sewer” when engineers tell us that the river annually empties four hundred and six million tons of mud into the Gulf of Mexico. The river is very crooked but is straightening itself. It has shortened itself 242 miles in 176 years. Another feature is that it is changing its locality. It has been stated that nearly the whole of the one thousand three hundred miles that La Salle floated down in his canoe two hundred years ago is dry land now.

After a few hours' ride past such scenery as gives one an unbounded admiration for Nature's God, there looms upon our vision a city upon a hill, flourishing with factories. It is Burlington, Iowa. Here we stop,

take quite a few passengers on board, back out and "straighten up," and are off again.

Below the city we pass a beautiful scene. The bend of the river is bordered with a high bluff, covered with trees, clothed in green. Upon this bluff are many fine houses overlooking the river—an ideal place to live. The railroad runs at the bottom of the bluff, along the river. In fact the railroad runs along the river most all the way from St. Louis to St. Paul, a distance of eight hundred miles.

At this time of the year the river is very low and the pilot must exercise great care to keep the boat from grounding on one of the many sandbars in the river. Sometimes we go at half speed and sometimes the engines are stopped and we drift along with the current until the shoal water is passed. When it rains lightly the water presents a strange aspect. It is streaked, like oil running about on its surface. The face of the water is a wonderful book but unintelligible to most people except those who have studied it much. The pilot can tell by the face of the water where the reefs are and it gives him other signs which are so helpful to him.

We now come to Fort Madison which, like most all cities along the river, is situated upon a hill. Here is located the State Penitentiary. This city has a beautiful water front. Below Fort Madison are many islands which divide the river into many streams. These islands are covered with primeval forests and were once the home of deer, bear and other wild animals. We soon come to a very historic place. It is Nauvoo, once the "Holy city of the Saints." When the Mormons were driven out of Missouri in 1838-39 they sought shelter in Hancock County, Ill., and on the banks of the Mississippi they established Nauvoo. It is an ideal place for a city and no doubt would have been a large one if the Mormons had been allowed to stay. But they grew unpopular and the people prepared to make war upon them. A warrant had been issued for Joseph and Hyrum Smith and they went to Carthage, Ill., and gave themselves up. On June 27, 1844, they were murdered by a mob in the Carthage jail. The old jail with its bullet-pierced windows is still standing. Meanwhile the State revoked the charter of Nauvoo and they departed for the promised land—Salt Lake City.

The city has about two thousand inhabitants now. Many of the houses are built from the stone of the destroyed temple. Also bargeload after bargeload was hauled to Rock Island to help build the Government arsenal. A few days after we had passed a thousand pounds of dynamite exploded in the town and wrecked several of these old buildings.

About thirty years ago it was thought that Washington was not well located for the capital of the United

States and a bill was introduced to move it to Nauvoo, but of course it did not pass.

The next thing of interest is the Keokuk canal. It is built around the rapids of the river and is eight miles long. The canal was finished in 1877 at a cost of about \$4,000,000. It costs about \$40,000 a year to maintain it. Boats drawing over four and one-half feet of water cannot get through the canal. Before the canal was built all freight had to be transferred over the rapids by flat boat. We pass through three locks in going through the canal. They are eighty feet wide and three hundred feet long. At the second lock we must fall eight feet and at the last one, twelve feet. The entire canal is rock walled. The continual settling of the turbid waters necessitates a constant dredging of the canal. This is done by the government boats.

The canal ends at Keokuk at which place we make a short stop. This place is rich in Indian history as Davenport is farther up. Here was the home of Chief Keokuk and a monument is erected to the famous chief's memory in one of the city's parks.

After a few more hours' ride upon the smooth waters, between the Illinois and Missouri shores, we arrive at Quincy just as twilight is about to be dispelled by darkness. Here the boat was to stay until the next day and we took this opportunity to visit our friends. After a substantial supper we climbed the hill into the city.

AUTUMN.

A. H. ANGLE.

THE summer has just passed and autumn is here with its gay colors and beautiful landscapes. This is the time of year that Dame Nature is making a great change. After having performed her work faithfully during the spring and summer to beautify this world of ours, it is now being made more beautiful as she prepares for the long winter's rest. The fields and forests, with their beautiful green foliage and flowers, which have shaded the traveler from the burning, hot sun, and have furnished nesting places for many thousands of our feathered songsters, and at the same time helped to bring refreshing showers to the thirsty earth, now change to bright reds, yellows, and browns, and present a far more beautiful picture than spring or summer.

We often hear autumn spoken of as "the days of melancholy," but I don't think I ever heard a lover of nature speak of it in that way. They have too much to employ their minds to be in a state of melancholy.

Autumn (or fall as we sometimes call it, here in Virginia) always had some kind of a fascination for me, especially when a lad at home. One reason I guess why I always liked autumn so well, was because I was raised on the farm, and had to work, I thought,

very hard during the summer. And at this season of the year the work on the farm was being finished up for me, and I could before starting to school have a few days off, in the forest, rabbit hunting and gathering nuts. This I always looked forward to and enjoyed very much, and too I was anxious to start to school, renewing old acquaintances and making some new ones. All of this went to make fall of more than ordinary interest.

Autumn is a very busy season with most everyone. The farmer is husking his corn and hauling it to the barn or the market, and sowing his wheat, and doing various other things that I could mention; and last of all he hauls in his winter's supply of wood, and then when the expected sleet and snow come he can rest easy, and enjoy the evenings by the open fireplace, for you know there is none of us that likes to haul wood in the snow.

The merchant is also getting his share of the business that is being transacted during the fall. The farmer after having marketed his crops, takes a day off, and brings his family to town to do their fall shopping. This continues with the country people, more or less from this on until Christmas. So the merchant is also kept quite busy during the so-called "melancholy days," so much so that he cannot get out and enjoy the luxuries of the field and forest, hunting and gathering nuts, even for a few days. But still we like to see autumn come with its gay colors and its frosty, health-giving atmosphere.

The very first tinge of frost that we feel in the air gives us new life. It quickens our steps, makes us more energetic and industrious. The delivery wagons and automobiles are hurrying up and down the street at breakneck speed. The meat man is always on time, with nice fresh steak and pork chops; the grocery man, as he enters his store, greets you with a broad smile and a cheerful good morning, saying, "This is a fine, large morning. The keen frosty air is so bracing." And then he can show you the very nicest fall apples, potatoes, and turnips that the country produces.

Now, who can call these "melancholy days"? It is true that the law of nature has arranged four distinct seasons, spring, summer, autumn, and winter, and we should like all of them, and not find fault with the disagreeable weather when it comes, but my ideal is the bright, frosty days of autumn.

Rocky Mount, Va. ❀ ❀ ❀

GIVE HIM ANOTHER CHANCE.

MAUD HAWKINS.

GIVE the fallen brother another chance. We do not know how great the temptation may have been. We do not know that we would not have fallen under similar circumstances. Did we never sin? It may be that his sin that looks so great in our eyes, is no worse than our little (?) sin, in the eyes of the Lord.

It is not always true that if a man goes wrong once he is bad at heart or has always been a hypocrite, or that he will sin again, if allowed to rise. He may have been true till this great temptation presented itself just at the right time when circumstances caused him to be weak and to fall.

Give him a chance to rise, nay, **HELP** him to rise. Do not kick him further down, to fall into worse temptation and sin. Look up, lift up, is the motto. No person is all bad, neither is any person all good. The jockey racing on Sunday who gave his life to save others in a runaway had some Christian qualities about him. It is better not to know the Bible and practice its teachings, than to know it and not practice it.

"Say Something Good When He's Down."

Pick out the folks you like the least and watch 'em for a while;

They never waste a kindly word, they never waste a smile;

They criticise their fellow-men at every chance they get, They never found a human just to suit their fancy yet. From them I guess you'd learn something, if they were pointed out—

Some things that every one of us should know a lot about,

When some one "knocks" a brother, pass around the loving cup —

Say something good about him if you have to make it up.

It's safe to say that every man God made holds trace of good

That he would fain exhibit to his fellows if he could; The kindly deeds in many a soul are hibernating there, Awaiting the encouragement of other souls that dare To show the best that's in them; and a universal move Would start the whole world running in a hopeful, helpful groove.

Say something sweet to paralyze the "kicker" on the spot —

Speak kindly of his victim if you know the man or not. The eyes that peek and peer to find the worst a brother holds,

The tongue that speaks in bitterness, that frets and fumes and scolds;

The hands that bruise the fallen, though their strength was made to raise;

The weaklings who have stumbled at the parting of the ways—

All these should be forgiven, for they "know not what they do."

Their hindrance makes a greater work for wiser ones like you,

So, when they scourge a wretched one who's drained sin's bitter cup,

Say something good about him—if you have to make it up.

—Elmira Telegram, April 4, '09.

❀ ❀ ❀

THERE are no fires that will melt out our drossy and corrupt particles like God's refining fires of duty and trial; living, as he sends us to live, in the open field of the world's sins and sorrows, its plausibilities and lies, its persecutions, animosities and fears, its eager delights and bitter wants.—*Horace Bushnell.*

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER.

Chapter LXXX. Is It Worth While?*

THE native workman in India sits down when he digs a post-hole, and a day's work with him is about four or five holes. An American digs eighty. The Hindu uses his feet for a vice and of course he must sit down to do that. My friend one day had the vice bolted to the side of a post so that it could be used easily in that position. Then he asked one of his new men from the jungle to plane off the edge of a board in that vice. The Hindu promptly removed the nuts from the bolts that held the vice, took them all out and then laid the vice on the ground. Next he sat down flat on the ground and with the vice between his feet, he fastened the board in it and began to plane its edge. In another part of the workshop a workman was running the lathe with his feet, he also sitting flat on the ground to do this kind of work. Another one was holding the chisel between his big toes, while in his mouth he held to a piece of leather that wound up and unwound over a spindle that turned only as he moved his body back and forth like a jumping jack. He was running the piece of machinery with his *mouth*. This was nothing new,

for there are some people in every shop who can manage machinery and other things, or who try to, with their *mouth*. They do that in this country. But the quality of work turned out by these men was poor, and the quantity very small indeed. It is a current saying among the missionaries that if there are two ways for doing a thing, a right and a wrong, the Hindu will always do it the wrong way. One day a Gujarati woman came to the bungalow and borrowed the rubber

water bottle of Elder Stover to cure the cramps of her grandmother. After the old lady died,—which she did,—they always do in India after such treatment as they receive there at the hands of the fake doctors,—my friend sent for the bottle. But as it did not come, he went for it.

"Oh," said the woman crying, "we had bad luck with your rubber water bottle. We filled it with water from that well there and was holding it over the fire here when the rubber all *fell to pieces*. Boo hoo!"

At another home the natives were powwow-ing for a woman who was very ill. The doctor compelled them to place her head on one stump and her feet on another, urging the poor sick woman meanwhile to try to maintain as straight a position of her body as possible without *falling*

Scene Under the Biggest Banyan Tree in the World. One Minute Exposure During Which a Native Man Walked Clear Down the Path and Out the Little End of the Picture. Taken About Sundown Near Broach on the Nerbudda River. W. B. Stover.

*This chapter should have appeared in the issue of Oct. 19, immediately following Chapter LXXVII in which the writer tells of the severe attack of fever which he suffered while visiting the Brethren missions.

through. Then they gave her support from below while a big tub of water was set upon her stomach. The doctor all this time was bowing and scraping on the ground around the poor deluded woman, praying to his god of medicine to help the patient. The woman grew worse and worse, at this treatment, and finally was dying. The doctor kept on scraping and scratching and bowing around in the dirt, and took good care to keep it up until she was sure enough dead. The longer he worked, the bigger the fee!

The best mission here is the best workshop, and the missionary that teaches only theoretical Christianity had better be holding the plow in Illinois, just as all preachers who are mere theorizers should be put to hard work. The people must be taught how to work, how to make shoes that they now sell there for fifty cents which when made as Christians make them, will sell at three and four dollars. The Brethren have their carpenter shop here, and the natives are building salable looms, some of which are going click-a-clack, one of them being operated by a boy who was once dying from starvation in the jungle. He is happy in his work, and his face beams with joy. The coat on his back was woven here with his own hands. Emmert Stover was wearing a pair of trousers that had been made on these looms. The building in which the work is done is airy and clean, a model to all this part of India, for few of the masses here know how to live in health. What the Hindu needs first of all is a full stomach and a job that will insure its refilling three times every day. What he wants is not theology but good pay for good service. The missionary here who merely preaches sermons and then walks around looking sorrowful at the sad plight of his fellows,—the fellow who pretends to feed the starving wretches the Bread of Life and then walks around with his hands in his pockets while they suffer the untold agonies of a continual starvation, ought to be horsewhipped. At Nausari Brother Jesse Emmert from Juniata College was making chairs and teaching his boys to make them,—fine office chairs, as good as you would find in the best Grand Rapids firm. The iron work of these chairs he was casting himself at Surat, a town near by. The chair can be made and sold in Bombay for a profit. So that a mission in time will be self-supporting and then finally productive of financial gain. This, of course, after long years, probably a lifetime or more, for the work of the mission is to keep pushing out into the untried and difficult fields where there is no profit whatever and only incessant outlay.

At Anklesvar the Brethren are conducting poultry, dairy, shoemaking and tailoring industries, and the natives are coming in to these centers from the idle, starving jungle towns, to get work, and then to find their Savior.

The Brahmin will then see, when Christ comes to

India as the carpenter and as the all-around worker, that chalking his forehead to set himself apart from the mass of people in order that he may enjoy privileges that can not be theirs, is laughably foolish for so thoughtful a man as the Brahmin is expected to be. He will be forced by his own self-accusing arguments or by those of his so-called inferiors to come down and live with the common folks, and work as hard and play as long, but no harder and no longer, than the common people.

Of all the missions I have seen, among the Baptist, the Presbyterian, the Lutheran and the Methodists, the Brethren missions seemed to be fuller of that spiritual essence of good sense and high honor and to have, in germ, though still weak in financial and material showing, the making of the finest missions in India. They have preëmpted the field and they intend to hold it, but it will be a great struggle, for others, seeing the good soil here, knowing of the scanty help received by these brethren, look with jealous eyes upon this garden for missions. Faithful support by the friends of the church will guarantee more on the Brethren missions, per dollar and per missionary, than on any other field in India. As I am a personal friend of nearly all of the workers on this field, and as my heart is with them, I wish I might say something here that would increase the gifts of the people several hundred per cent. If every one could see as my eyes saw there how much good a dollar will do towards saving a soul,—fifty times more than in this country,—I am sure they would gladly give to the India mission field. As for myself I aim to give five dollars where I once gave five cents, and I will give it more gladly.

The same wise spirit of economy and skillful industry that prevails among the Brethren at home will, when re-enforced by the solid backing of the whole Brotherhood, bloom and bear fruit of the same splendid quality abroad. Inadequate support will mean less buildings than needed, cheaper materials and more sickness and death of the very choice of the home land of devoted and brilliant sons and daughters. It will also mean loss of prestige and respect among the natives and a loss of converts to other denominations whose sympathies for the poor heathen are less pure and strong than the non-professional worker of the Church of the Brethren.

Remember the Mission Board in bigger gifts of the Lord's money and send personal "Christmas" boxes oftener to the missionaries.

PROHIBITION has a moral and a legal side. The moral side is, "Keep your boy out of danger." The legal side is, "Keep the danger out of your boy's way."

THE CARNIVAL

GRANT MAHAN

Two or three times we have happened to be in southern cities at carnival time, and could not avoid seeing something of what was done by way of celebration. We had read about the carnival and had known of people taking long journeys in order to be at a certain city during carnival week, and in our ignorance had come to the conclusion that at that time there must be something to be seen that was really worth while. But after having seen one in our home town our opinion was to some extent changed, though we still thought the southern carnival must be something different, must have attractions of which we of the North knew nothing.

We never did walk a block out of the way to see what was done, and after being forced by circumstances to see, we can say freely that it would be better to walk a mile or two in order to avoid seeing. Once in a while there may be a pretty, artistically gotten up float; but where there is one such there

are several of the ugly, crude and occasionally indecent. That is the way it has always impressed us, and inquiry has not brought to light anything to change this opinion.

Just how some men, and especially those professing religion, can favor having a carnival in their town is beyond us. True, some are of the opinion that it helps business, booms the town. It may, it possibly does, for the time being. But we believe that if the facts were carefully investigated it would be found that the business which gets most help is just the one that a self-respecting man does not want to help at all, would hinder whenever and wherever he could. The fever for such seasons does not seem to be as high as it was

some years ago; and, now that it has gone down, men can look at the matter with less prejudice and better judgment.

It is usual for great crowds of people to come to the town or city in which carnival is held; but the majority of them any place is better off without. They are the vultures of society. They have learned where the carcass is to be, and flock together there. We once had figures to show how many of the worst people came to a city to celebrate; but they have been mislaid. They would make almost any man stop and think; and after he has thought he will no longer give his influence in

favor of anything so demoralizing. Temptation is brought into the way of those who might have escaped it, and most people are inclined to let themselves loose and do as the crowd does.

Take, for instance, the throwing of paper. At carnival time even the most depraved feel free to ap-

proach the most respected and fill his or her eyes, mouth and clothing full of the little bits of paper. It matters not if you are passing along on business which is urgent, and if you are attending strictly to your own business, suddenly you are made uncomfortable by being covered with the paper. Even persons who are ordinarily sane lose their heads and act as do the most wanton. Such things cannot be done without moral loss: and financial gain cannot compensate for that. We doubt whether there is a real financial gain because of the carnival.

After two days of carnival in a city where we were staying for a short time there were twenty-four loads of paper bits swept and shoveled up and hauled away.

Just think of the time wasted in getting all this stuff ready and shipping it in; then think of the amount of money spent by those who did not have it to spend for anything but the necessities of life. And while they bought it and threw it to the discomfort of others they thought they were having a good time! What strange ideas people do sometimes get.

INGLENOOK readers are probably not much troubled by carnival seasons; but they may have occasion to use their influence for or against the carnival coming to their towns some day, and it will be well for them to think about it beforehand and be ready to work against evil coming in; enough of it comes uninvited. We believe the main influence of the carnival is bad, first, last, and all the time; and for that reason oppose it.

THE SCHOOLMASTER'S BURDEN.

IN the olden days it was sometimes the custom to regard the schoolmaster as a be-spectacled pedagogue, whose eyes were so tightly fastened on his books that he could see little or nothing of the affairs of men. The writer is neither be-spectacled nor a pedagogue, which may or may not enable him to see the clearer. He thinks he sees, however, that the schoolmaster's burden has grown like the White Man's. Two decades ago the burden was a light one. The family, the church, the open country life, all were contributing important elements to the training of the child.

A tremendous educational unrest has come upon the entire country and there are signs of an impending school revolution.

What IS the matter with the public schools? Are they failing? Are the other two institutions, the home and the church failing in more or less of their portion of the work? Or has the schoolmaster succeeded so well in his task of training his third of the child, the intellectual third, that the family and the church have concluded to tie their burden, the other two-thirds, upon his back?

The common schools are a passion with the American people. Over three hundred million of the four hundred million dollars spent annually for education in America are spent upon the eight grades of the public schools. Of the nineteen million students in the United States nearly seventeen million are in the common schools. Magnificent as has been the record made by these schools in the past, there is a growing feeling, particularly in the cities, that they are not yet rendering their full quota of service. Perhaps there is an implied compliment in the belief that the schools are capable of rendering a more magnificent service,—that in addition to its past work the school is the institution best fitted to render the service now neglected by the home and the church.

The average American child enters the primary

school at six years of age. If he is either particularly fortunate or particularly unfortunate he may have the benefit of a Kindergarten for one or two years before this. Almost without exception, in the cities, Kindergartens are placed, and rightly, in the most unfortunate districts, in answer to a well recognized feeling that these little children and the families they represent should have the first opportunity for helpful training. The child is supposed to remain in the primary schools eight years. If he belongs to the very small minority of the well conditioned he may go on to the high school from fourteen to eighteen, and then to college from eighteen to twenty-two. As a matter of fact, however, an overwhelming majority of the children leave school about thirteen or fourteen, and the average child in the United States receives a little over five years of schooling.

The master's burden, therefore, is a perfectly simple and easy one. All he has to do is to give a child in five years the ten or twelve years' training necessary to make of him an intelligent, self-supporting citizen!

The task is further simplified by the fact that the public school is the only institution on earth which is expected to turn out a uniformly excellent product upon a constantly decreasing quality of raw material. The mere fact that from ten to sixty per cent of the children now come, as they do in many cities, from homes in which English is never spoken by the parents and where all of the standards which have gone to make up Anglo-Saxon civilization are unknown, where all of the ideals of simple decent living as well as of larger life and service are as yet unperceived, this fact is never considered. The schoolmaster is expected to make full-fledged American citizens of them,—and in five years!

How he sighs sometimes for the good old days when his task was clearly defined. He was to be held responsible merely for the intellectual training of the child in the rudiments of reading, writing and arithmetic. Now he may be called upon to equip the child with a knowledge of school gardens, or school cities, physical culture, cooking, sewing, manual training, moral training, raffia work, music, drawing, physiology with especial reference to the effects of alcoholic beverages upon the human system, nature study, slant writing of every conceivable angle,—all in those same five years!

The one thing which made the schoolmaster's heart light in the olden days was the conviction, usually his only reward, that he was making men and women, good and true. And the burden which weighs most heavily upon his heart in the cities today is that in spite of all the improvements it somehow seems no longer possible for him to turn out these same men and women, good and true.

He realizes all of the advantages of the magnificent

team work in some of the city schools. Yet he sometimes doubts whether the product of the ten month term in the city equals, in all around development, the former product of the shorter term in the country. He recognizes that the schools of America, city and country, are giving the best purely intellectual training ever given any children. But he believes that man was not born to work in a sky-scraper and burrow in a flat; that a fire escape can hardly be regarded as an ideal children's play-ground; that seventy families in one building will scarcely fail to leave a mark upon the third or fourth generation, if indeed the family shall last that long. The universal experience has been that the third generation of city bred people come to grief, physically, and usually morally. He can see but little hope for the future of America with her city children reared under present conditions.

It was in many ways an ideal condition when pupils walked from one to two miles to school, when there were abundant and healthful activities for the child on the farm; when he came to school mentally hungry, indeed almost starved, and absorbed and assimilated knowledge at a rate which has made city teachers envious ever since. Today, in a typical section of New York there are 10,000 school children to be accommodated within a radius of three city blocks. The next three blocks in every direction are almost equally congested.

Yet the schoolmaster is no pessimist. If he were he would never be teaching school. He hopes and prays for a time when there shall be added to that magnificent team work of some of the city schools the superb strength, individuality and initiative of the country school. He longs for a system of education which will develop the whole child and every child, according to the maximum of his ability into the best human product this earth has ever known.

It is easy to arouse public sentiment for the public school in any community. Every parent may be convinced that his child should have the maximum advantages. The community will demand honest, capable and non-partisan administration of school affairs if the issue is put fairly. Money will pour into school coffers when it is known that there is need and when there is assurance that every cent will be spent honestly for the welfare of the child. As long as America keeps spending three times as much for liquor as for education and twice as much for tobacco there can be no fair complaint of educational extravagance. The Germans say we are education-mad in America. It is at least a divine and a disinterested madness.

It is neither money nor good intent that is lacking, but effective administration and a clear understanding of the newer conditions of school life.

The thing most needed is a schoolmaster and a race

of schoolmasters who really see clearly and who plan wisely.

It is universally conceded that the first and greatest duty of the State is to produce men and women, good and true. The schoolmaster, rightly considered, is the agent of the State whose duty it is to see that this is done. By training, by years of experience, by a broad and comprehensive view of the generations and the centuries he should be able to see, better than any inexperienced layman, better than any single parent or family or church whether parent or family or church is neglecting its portion of the final duty in making men. While the schoolmaster may be specifically responsible for merely the intellectual training of the child, he is, in a wider sense, generally responsible for the whole child and his physical and moral welfare. Or, if this be denied, he is at least the best qualified to decide which of the other agencies is failing in its full duty and to suggest a remedy which shall be adequate.

It is the duty of the schoolmaster to see that whatever deficiency may exist in the present educational system either for city or country shall be made up. He may fix the responsibility for failure where it properly belongs. He should go over the entire course of study, cut out the dead timber, test and try each subject anew to prove whether or not it serves a present need. For the time of the child is too precious, and the things really vital are too many to tolerate the waste of a moment of school time. He may assign the neglected portion of the work to that institution, whether it be family, church or a school of wider scope, which shows the ability to solve the problem and to bear the burden. Well trained, well rounded children we must have if we are to remain a great nation. And race-suicide itself is only a little less fatal to the final well being of the nation than a failure to conserve the latent strength of its children. Forests and mines are as nothing compared with them.

The real schoolmaster of clear eye and wise counsel is determined that the quality of the output of the school shall not deteriorate, even though the raw material shall come from the ends of the earth. He is determined that year after year his boys and girls shall grow nearer and nearer the ideal of the perfect citizen physically, mentally and morally. He is determined that not only shall the American boy and girl have the best training for efficient service ever vouchsafed to freemen, but that the boy and girl of all the nations who come shall in time, through the patient, toiling self-sacrificing efforts of American teachers, rise to the same high level and be prepared for the same magnificent service to their fellows.

For after all the schoolmaster is the real seer,—the only one, often, in the entire community whose vision is large enough to take in both the practical affairs of the day and also the eternal affairs of the great tomorrow.

row, the only one whose ideal of life and conduct and service covers both the material and the spiritual realms, the only one wise enough to see in their right proportions and to esteem at their proper values the iron and the steel, the gold and the harvest, as well as the life and the leisure, the soul and the eternal destiny of the boy and the girl; to realize with President Roosevelt, that "the best of all the crops is the children."

And just because the schoolmaster and the schoolmaster alone sometimes sees this it is his duty to recognize that passion for education which is in the hearts of his fellow Americans everywhere, to foster it, to guide it, to keep it free from the touch of the petty spoilsman political or other, and to bring to pass the dedication of this tremendous latent force to the eternal welfare of the children.

Let us have, then, a definite understanding as to just what does constitute the schoolmaster's burden. For what portion of the child's training is he to be held responsible? Is the home to be permitted to slight its duty to the child and then boldly lay the blame for the deficiency upon the school? Are the church and the Sunday school to continue to fail utterly in giving the child satisfactory or adequate moral and ethical training, and then denounce the school for the result?

Let us have an understanding as to what is vital and possible during the theoretical eight years, and the actual five years in which the schoolmaster has partial care of the child. Let us determine anew, and in the light of the changed conditions, what is the real work of the eight grades.

The American teacher has no disposition to slight his burden. It may be possible that those who have succeeded in giving children intellectual training which is in the main satisfactory shall prove to be the ones who are also best fitted to supervise the child's physical and moral training. But it is self-evident that if the province of the public school is to be trebled by adding responsibility for physical and moral training there must in fairness be additional time and additional facilities provided. If, on the other hand, it is understood that the teacher's work is to deal only with the child's intellect it is incumbent upon the community to bring the family and the church up to their neglected work or to provide some new institution whose function it shall be to deal with these portions of a child's training.

It is not too much to hope that the school of the future, when properly equipped, will be able to train the child physically, and morally, better than he is being trained at present in the average home or church.

It is not too much to believe that the outcome of the impending revolution shall be an era of Public School Extension, and shall produce an ideal school, a social center, open and in operation for some grade of pupils

perhaps three hundred days in the year and almost as many nights,—a veritable Alma Mater, a bountiful mother, forever giving to the children of America and of all the nations spiritual inspiration as well as intellectual training.—*George W. Gerwig, Secretary Board of Education, Allegheny, Pa., in Ohio Educational Monthly.*

SOME BELIEFS AND FUNERAL CUSTOMS OF CHINA.

DEATH has no less a mystery in China than in other parts of the great world. In Christian lands it has been robbed of much of its dread by the blessed hope which is held out to us through the Gospel of the Christ who conquered death and arose from the dead, but here it is full of terror. But here as everywhere, the soul of man is not content with the thought that the grave will end all, there is a something which cries out after a hereafter even though that hereafter be but dark and uncertain.

The Chinese people believe that man has three souls. At death one of these souls remains in the coffin with the body, or about the grave, one remains in the home and the other goes to some place corresponding very much to the old Greek idea of hades, where it is to live and be judged of the deeds done in the body. These departed spirits have simply moved out of their tabernacles of clay and have carried with them the same needs, which they had while on earth. The soul which goes to hades will stand in need of money, food and clothing as much there as when on earth. To begin with there are seven judges before whom he must pass for judgment, in succession. Each one of these judges is surrounded by his evil spirits the same as the earthly magistrate is surrounded by his yamen runners, and it is absolutely necessary to have money to bribe these spirits, else there can be no hope of reaching the ear of the judges. Each judge must be propitiated else there can be no hope of escaping all the punishments that can be heaped upon the poor soul. In order to reach these ends, paper money is burned in front of the coffin, at the home in front of the tablet, or at the grave, with the thought that the spirit of the money will go to the spirit of the dead and he will be able to use it as he sees fit. In order to please the judges incense is kept burning for 49 days, the time it is supposed to take, if all goes well, for the soul to pass through the hands of all the seven judges. After this the man will continually need money, clothing and food. His friends are supposed to burn paper representing these things at set times, that the spirit may suffer no lack. Food is placed in front of the tablet or sometimes at the grave. After the spirit of the food has had time to go to the departed the relatives gather and feast on the material part, which does not seem to have suffered from the loss of the spiritual part, which of course, the dead has consumed.

NATURE STUDIES

BIRDS AND CATS.

M. M. WINESBURG.

IN West Florida the mocking bird is "Prince Royal," for they seem to be the only song birds in that portion of the State—or at least they were the only kind I saw or heard while there. And if the bird is a mocker he surely has some original stunts of his own sometimes also in the way of action.

A big umbrella tree at the end of the house was the roosting place of several of those mockers, and at the first peep of day they began thrilling and chirping. The chirping reminded me of the chirp of very young chickens. In fact, the first time that I noticed the chirping, I thought that some baby chicks were lost and went to look for them, but it was only a couple of mocking birds quarreling in a grapevine.

One bright October morning I was out among the rose bushes in the yard when a mocking bird flew from the umbrella tree and lit on the chimney of the house. Here the bird fluttered for a moment or two as if it was enjoying a sun bath in the tangy air, and then he swelled up his tiny throat and began to sing; at first he tried a few short, chirpy notes and then he burst forth with a perfect melody of sounds, high and low, musical and unmusical and the louder he sang the more excited he became, fluttering his wings and turning his head from side to side. Suddenly he leaped straight up in the air, whirled over and settled back down on the edge of the chimney and began a fresh song.

Three times while I was watching him, did that bird cut these antics, as though he was so happy he could not sit still, but must leap up in the air and turn summersaults to get rid of some of his exuberance of spirits.

Just as the sun was setting, I again saw a mocking bird perched on the edge of the chimney; I supposed it was my friend of the morning, but this time he was very decorous and only kept time with his head and an occasional flutter of his wings while he sang his evening song. But I noticed that in the evening he faced the setting sun, while in the morning he had faced the east.

These mocking birds do not seem to be the least bit afraid of humans, and the closer they can get to the house the better it seems to please them. I suppose

it is because they can find scraps of food thrown out from the table, or fruit; for they always help themselves to whatever fruit they can find and the figs have to suffer when they ripen.

And now, while the incident comes back fresh to my mind, I will relate an act of unselfishness that I observed between two cats. At the house there were two large cats, black Tom and white Tabby, and one evening when the supper was set out for the cats, Tabby was not at the door as usual and Tom only ate a small portion of the food while he kept up such a mewing that one of the family wondered what was the matter with Tom that he mewed so and would not eat his supper.

The next morning when food was again put out for the cats, Tom was not there, and Tabby did just as Tom had done the evening before; she hardly tasted the food but walked around the yard and mewed loudly. Pretty soon we saw Tom coming through the garden, and when he came for his breakfast Tabby came too, and then they ate their breakfast together. Then I knew why Tom would not eat his supper the evening before, he was waiting for Tabby to come and get her share also. And then I could not help thinking that these cats had more feeling for each other than many humans have for their own kind, for there are people in this world that want all they see, and they will not let other people's share of the world's goods remain untouched till they come for it.

NATURE STUDIES.

THE little black jumping spider is a friend to man, as it eats by the hundred flies, bugs, grasshoppers, plant lice, midges, gnats and caterpillars. We can find its haunts on the sunny side of a tree trunk, on the old barn door, among pine needles, in the crannies of the stone wall, under the ends of wooden steps, or in any half-sheltered, half-sunny place. It spins a web, a delicate, white cottony bag to shelter itself and eggs through the winter; and later, when the eggs hatch, the little spiders swarm all over the mother, and all through the thick web, reminding one of the old woman who lived in a shoe. You may find its nest in the heads of wild carrot, in curled leaves, which the web strands have pulled together. Get a straw and poke it into one end of the web and out pops the small pro-

prietor ready to stand and fight, yet it is quite harmless.

Moose are very fond of water-lilies, and it is a strange sight to see them enjoying a feast of them. They slowly stalk about in three or four feet of water, often with their heads under water for half a minute at a time, so that their backs look like boulders above water. Then a pair of magnificent antlers comes up, and the water is shaken out of big ears with a flapping noise that can be heard afar, and the big, long muzzle leisurely chews a dripping mouthful of water-lily leaves torn from the bottom.—*Farm Journal*.

THE AMERICAN BARN OWL.

ON April first my friend and I went out early one beautiful morning to study the habits and nestlings of the birds in our country. The sun had not risen yet and the dark shadows of the oaks and sycamores were just beginning to show their leaves through the light of the oncoming morning as my friend and I were approaching a gloomy and lonely canyon near our home. The owls and other night prowlers had not crept back to their dark and dreary homes among these hills. Walking quietly along a winding trail we were startled to hear near us the nasal snore of an owl. Looking right and left, up and down, I saw, to my surprise, near the top of a neighboring sycamore tree a hole which was of a large size. Again the sound was heard. Rushing up to the trunk of the tree I listened and heard again the same sound; then I made up my mind that some species of an owl was there. Just then out of this hole flew a large and beautiful bird, the American barn owl. I watched it as best I could in the faint light till I saw it perch on an oak tree not more than fifty feet away. Quickly climbing to the hole I discovered that it contained five white, shining eggs. The hole was about a foot and a half in diameter, and extended four feet into the interior of the trunk and was forty feet from the ground. I left the eggs and in five weeks returned to see what was there. To my great surprise I discovered five barn owls, which were almost as large as their mother. Their covering having once been of a white down was now becoming the same as their mother's. On April 30 my friend and I secured from the Methodist Episcopal Church steeple

four young owlets and their mother. Taking them to my home we built them a cage and kept them for eight weeks. The birds were growing very rapidly and becoming rather restless and wanting to be at liberty. My friend and I on July 4 took them to one of the highest peaks of the hills, fired a farewell salute and set them free. The way they flew across the canyons was marvelous and beautiful. We stood there and watched them until they disappeared around a bend in the hills and were out of sight. These were the first owls I had ever raised and I was proud of them. I hated to set them free, for they were such great pets and almost part of the family. Next year I will try and raise another species and make similar pets of them.—*Sunday School Advocate*.

COMMON ERRORS ABOUT BIRDS.

SOME of the common sayings concerning birds are stupidly wrong. "You stupid goose!" is an expression constantly heard; yet the goose, whether wild or tame, is most sagacious. Wild geese, for instance, never feed without throwing out scouts or sentries. J. G. Millais describes how he saw a flock of geese feeding with sentries out, and how, after a time, one of the sentries went up to a bird that was feeding, and gave it a gentle peck on the back. The latter thereupon left its grazing and went off to take up guard, while the sentry took its turn to feed.

"Gentle as a dove" is such a common proverb that the dove has become the emblem of peace. Quite a mistake, for all the dove and pigeon tribe are great fighters, and in the breeding season the cock birds indulge in battles royal. The foolish prejudice against all birds of prey includes that pretty little hawk, the kestrel. Now, if the kestrel were known as the mouse falcon, it is possible that keepers would not invariably shoot it on sight. The kestrel lives mainly on mice and wire-worms. It is quite innocent of killing partridges. In a game-preserving district in southern Scotland kestrels were practically exterminated a few years ago. What was the result? Over a tract of country of 1,200 square miles field mice increased in such myriads that the grazing was absolutely ruined. One sheep farmer lost \$8,000 in one year.—*St. Louis Republic*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

SOMETIMES a great work fails because of the lack of a little help, just as many of the greatest achievements in the world owe their success to some apparently insignificant influence. Let us never despise the day of small things.

OUR readers who are interested in our missions in India will have reason to feel encouraged with what Mr. Spickler has to say of them in this issue. But while there is reason for feeling much pleased with the work that has been done, we should remember that there is yet much to do, much that we here in America can do and should do to lift up the fallen of India and bring light to the darkened minds and souls.

LAW-ABIDING ADMINISTRATION.

ANY one whose interest in public matters is sufficient to cause him to keep an eye on the manner in which affairs are administered at the nation's capital, must at times seriously doubt whether the Roosevelt policies are being followed according to promise. The methods now used are so different from those under which these policies were inaugurated that the observer fails to see how they can bring about the same results. However, as we said some time ago, Mr. Taft should be allowed to choose his methods for carrying on the work which has been laid out for the administration, as it is only in this way that he can do his best work and we can get a true idea of the man and of his fitness for the place.

It was a cause for comment last spring when it was noted that our eminent lawyer President had, in the majority of cases, chosen men to fill positions in his cabinet who had themselves attained eminence through their profession as lawyers. Going on the first thought of what a lawyer is, some have concluded that a cabinet of lawyers, with a lawyer President at its head,

gives promise of a law-abiding administration. One writer looks forward to this as an "administration of law in contrast to the past administration of expediency."

The majority of people heartily favor faithfulness to law in the best sense of that term and will gladly second the efforts of the administration if they are directed in the way of a just interpretation of it, but at the same time the people know well and to their sorrow, that lawyers endeavor to evade the law almost as often as they seek to defend it. If by faithfulness to law is meant a literal interpretation of it which defeats its real purpose, as is so often the case, then few will welcome such an administration. The people admire loyalty to the law, but it is that sort of loyalty that stands by the law in its designed form and not that which because of a technicality would turn it from its original purpose. Hundreds of good laws on the statute books are ineffective today, not because they are not needed and would not be a blessing to people in general, but simply because some lawyer has found a loophole in them through which his clients may escape.

Going back to the statement quoted above from a certain writer, and to the hint which it contains that the past administration was not a law-abiding one, it may be said in reply that the past administration could not have been the popular one it was with the people if there had been a studied disregard for the law. One could hardly find a greater friend to good laws than was our former President. If he sometimes gave scant regard to certain laws it was because they stood in the way of better ones,—laws that were for the general good instead of for the benefit of a few.

We repeat that the people heartily favor faithfulness to law if by this is meant an interpretation of it that comprehends the most good for the greatest number. Judging by the record already made by the President and some of his advisers, we see no reason why we may not expect such an administration of the law. We have the right to expect it; let us base our hopes on our rights.

ANOTHER PEACE PRIZE.

IN the October issue of *The Advocate of Peace* announcement is made of a peace prize offered through the Mohonk Conference by Mr. Chester Dewitt Pugsley of Peekskill, N. Y. Mr. Pugsley last year offered through the conference a prize of \$50 for the best essay written by an American college student on the peace movement. The prize was won by L. B. Bobbitt, a Johns Hopkins sophomore. Honorable mention was also given to several other students who did good work. The prize was presented at the last Mohonk Conference and was one of the most interesting features of the week.

Because of the interest that was taken in the competition and because of his own increased interest in the cause of peace, Mr. Pugsley is now offering through the conference a prize of \$100 for 1910. The topic to be written on is "International Arbitration," but this may include any subject specifically treated in the "Conventions for the Pacific Settlement of International Disputes," adopted by the first and second Hague Conferences, or in the "Draft Convention Relative to the Creation of a Judicial Arbitration Court," agreed to at the second Hague Conference. "The term 'undergraduate student' applies only to one who, in a college or scientific school, is doing the work prescribed for the degree of bachelor or its technical equivalent." The essays are to be from three thousand to five thousand words in length. The prize will be awarded at the Mohonk Conference next May, to which the winner will be invited. The judges are Hon. Richard Bartholdt, President Butler of Columbia University, and Prof. George Grafton Wilson of Brown University. Full information as to details may be had from Mr. H. C. Phillips, secretary of the Mohonk Conference, Mohonk Lake, Ulster County, N. Y.

Much of the interest in the cause of peace that is now taking a practical turn and adding to the growing weight of influence against war has been created in the schools by the peace prize contest. Many people are not earnest advocates of peace simply because they have not given any attention to the subject. When once their interest has been aroused with few exceptions they lend their efforts to the peace movement. The cause of peace is every year receiving many young recruits who within a few years will make its power felt as it has not yet been felt in the world.

THE LAND OF USED-TO-BE.

SELECTED BY ANNA LESH.

Beyond the purple, hazy trees
Of summer's utmost boundaries;
Beyond the sands, beyond the seas,
Beyond the range of eyes like these,
And only in the reach of the
Enraptured gaze of memory,
There lies a land long lost to me—
The land of Used-to-be.

A land enchanted, such as swung
In golden seas, when sirens clung
Along their dripping brinks, and sung
To Jason in that mystic tongue
That dazed men with its melody;
Oh, such a land, with such a sea
Kissing its shores eternally,
Is the fair Used-to-be.

A land where music ever girds
The air with belts of singing birds,
And sows all sounds with such sweet words
That even in the lowing herds
A meaning lives so sweet to me.
Lost laughter ripples limpidly

From lips brimmed o'er with all the glee
Of rare old Used-to-be.

Oh, land of love and dreamy thoughts
And shining fields and shady spots,
Of coolest, greenest, grassy plots
Embossed with wild forget-me-nots,
And all the blooms that cunningly
Lift their faces up to me
Out of the past; I kiss in thee
The lips of Used-to-be!

I love ye all, and with wet eyes
Turned glimmeringly on the skies,
My blessing like your perfumes rise,
Till o'er my soul a silence lies
Sweeter than any song to me,
Sweeter than any melody
Or its sweet echo, yea, all three—
My dreams of Used-to-be!

—James Whitcomb Riley.

THE SUNDAY NEWSPAPER.

THE American Sunday is now become a blue, red, green, yellow and purple Sunday, testifying, by the litter of comic supplement lithography which overflows from the sitting room to the sidewalk and from the porch to the lawn, how a great Christian nation spends its Sabbath. Fortunately, there are signs of growing opposition to the pictorial vulgarities on which our children have been fed. At the recent national convention of the Catholic Educational Association, the parish school department entered heartily into the campaign against the Yellow Kid art, and called upon Catholic parents "to co-operate by word and example in the extermination of the evil." The diocese of Philadelphia is preparing to take up the fight against the "scandalous evil which corrupts manners, language, filial respect, and the sense of reverence for age and suffering." That a nation exceptionally gifted with the sense of humor should be brutalized down to the level of the horse laugh, is a sad thing indeed.—*New York Evening Post.*

THE REAL PROBLEM.

I AM convinced that this moral question among children is by far the most important problem that concerns the preservation of the American home; and beside it the mere matter of the boy or girl who steals, or runs away is of small moment, says Judge Ben B. Lindsey in the November *Housekeeper*. If the nation decays—as it must if the American home is undermined—it is because mothers and fathers have proven false; it is because mothers and fathers have become traitors to childhood. Schools, churches, children's courts can do much, but they cannot supply the deficiency of hopeless homes, for there, in the heart of the American home, is the little child, and there also is the state, and the state is the child.

Preserve the child and you preserve the state; take care of the child, and the state will take care of itself.

THE HOME WORLD

“THE MAN WHO PUT HIS ARM AROUND ME”

“AND what is the name of this little man?” Brown had asked, holding out his hand invitingly to the diffident boy, but looking at the boy’s mother.

“His name is Govan,” she replied.

“And does he go to school?” pursued Brown.

By this time Govan was standing by Brown’s side, a tow-headed slip of a boy of six, absolutely different in every item from his brawny, five-feet-ten Scotch mother—like a pale flower plucked from a Turk’s-head cactus.

“Yes; he goes to school but his teacher is telling me he is a bad boy,” said Mrs. MacNabb.

Brown’s arm had been around the boy for some time; now he drew him closer and looking down into his eyes said: “Govan. That is a new name to me. How do you spell it?”

We had called to see Govan’s brother Jim, but Jim was out. Since the death of his father two years ago, Jim, “a fine lad o’ thirty” and a man after his mother’s own heart, had assumed the support of the entire family. The conversation ran naturally towards Jim, and Govan was not mentioned again until just as we were going.

“Hello!” exclaimed Brown, fingering a long leather strap which his hand had come upon accidentally on the edge of the door casing, “Jim hangs his razor strap a long ways from the mirror, doesn’t he?”

Mrs. MacNabb smiled sourly. “When the teacher was telling me Govan was a bad boy,” she said, “I was telling her to remember the words of the Book and not spare the rod and spoil the child; and if she couldn’t make Govan a good boy I would try to do my duty with the belt. Good night.”

“Poor little fatherless chap!” said Brown as we turned into the road. “Think of that timid, frail child and that six-foot woman with ‘the belt’! Govan is bashful in school; he isn’t bad.”

Brown, with his passionate love for all children, had never seen a “bad” one,—they were ill or neglected

or spoiled by indulgence, if they made trouble; their parents were the culprits who needed “the belt.”

A week later I met Govan on the street.

“Where’s your friend?” he inquired, softly.

“What friend, Govan?”

“The man who put his arm around me.” That ought to be the boy’s first thought about his father.

When I was as small as I can remember, my mother used to call me heavy. I could toddle about her all day, but along towards noon I wanted to ride a little. Mother couldn’t carry me as she used to, but there was a big black-bearded fellow in a suit of blue overall, who used to stride in about that time, and whisk me up off the floor and pitch me into the air and catch me as I came down, and take me in his arms and carry me on his bosom for a few moments before dinner. I shall never forget him!

Wasn’t he strong! I had no more fear of falling from his arms than I had of falling out of my trundle-bed. And how high up I was in his arms! I had to look *down* into mother’s face! It was a novelty to see the tops of the tables, and the inside of the sink, and things cooking in a spider on the red hot stove, and grass and flowers outside the window instead of sky and trees. I wanted to ride on and on, but I knew that when mother said, “Dinner is ready,” I should be put into my high chair and the ride would be over.

But there were compensations. I was sure of another ride the next day, and I was sure that my chair would be next his at the table. Now that I had grown to be a “little man” big enough to sit at table, of course he fed me as he did everybody else. He used to put choice bits from his own plate into my little “X Y Z plate.” Sometimes mother wondered if he’d better, but he always laughed and said, “Oh, it won’t hurt him, he has teeth of his own now!” He used to put his arm around me when he helped me to drink from my tin cup and he patted me on the back when I choked.

You don’t do that for your baby, you wise and im-

portant man? Then I am glad I am not your little boy. And I want to tell you something else—for I am no longer anybody's little boy but God's—if you don't do such things for your children you are losing half the fun of living, and are laying up for yourself a lonely old age. Let your children alone, turn them over to hired help, spend your time getting rich and running the lodge and the club and then, by and by, you can have the pleasure of wondering why it is that your boys do not spend their evenings at home, enjoy your company, or care a rap about your welfare. You must me numb already if you don't enjoy the ringing laugh of a child, the feel of his plump lively little body—as hard as a rubber-boot-heel—his wise remarks about you and the world in general, and his unanswerable questions about God.

“That man who put his arms around me!”—in the twilight, and by the open fire of an evening—told me stories beginning, “When I was a little boy.” There were no better stories than those. And you don't tell them to your little boy? Then I am glad again that I am not your little boy. You can't tell them? Try it. Get the boy away with you alone somewhere, and begin. You will surprise yourself with your success. You will become a hero in his eyes. Tell the experiences that will help him as he follows the same boyhood path you stumbled along in your day. Let him know that you, *you* were once a heedless boy, a boy who forgot, a boy who spilled things, and tore things, and lost things, a boy who got into trouble, a boy who had a good time. How it will surprise him! How much better he will like you!

That man used to put his arm around me when I sat proudly by his side on the front seat going to church on Sunday. How vivid yet the memory of those sunny hours! Always green fields and woods along those three miles of country road, always that marvelously funny blue-shadowed horse working silently along flat in the dust beside old Fan. With one arm the man drove. Sometimes he let me work the whip. I could help old Fan drive flies, he said. Sometimes he let me hold the reins. And so I learned how to steer a horse before I learned to steer a straight course through the Ten Commandments and the Beatitudes and the names of the minor prophets.

That man used to put his arm around me and ask helpful questions when I was trying to figure out my first problems in arithmetic. I never could do much with “examples,” but somehow when his arm was around me and he took my pencil and made me tell him what to write to work out one of his funny problems about eating rhinoceroses, or distributing bushels of cannon crackers, my own stupid book problems seemed easier.

He put his arm around me when I was learning to swim. I didn't have to run away and learn on the sly,

nor did the big boys catch me and throw me in to “sink or swim, live or die, survive or perish.” My father told me one summer that it was time for his boy to know how to swim. He took me to the “Sandbar” where the big boys went, and I saw him dive in head-first, and swim any side up, in the water or under it, I saw him float and stand on his head under water with his feet out. He could make the fat-man's dive, and the turtle-dive, and go leapfrog into the river over the shoulders of Uncle Tom. What rare sport it was! Did I want to know how to swim? You bet!

When we went in together, he said, “Now if you will do just what I tell you to do, you will learn to swim and dive this week.” The first day I learned to “duck,” the next to float on my back, the next two days he held me by his side in four feet of water and taught me the swimming movements. Then he let me go and I swam.

He put his arm around me when I passed the dangerous straits between boyhood and manhood. That passage is not to be talked about freely in a newspaper, but it ought to be talked about more freely than it ever has been talked about, in some printed thing for every father to read. I was fourteen. I remember the sunlit room in his workshop, the bench with the watch tools arranged upon it, the little Bible opened to a certain chapter. I recall the thrill of the quiet words, “Henry, come here a moment, I have something to tell you.” And then the revelation. I had been a boy, I would soon be a man. I had been a joy to my father; some day I might know how great a joy; but first there were duties, self-denials, a discipline for vigorous manhood.

I was not only to keep myself pure and strong, but I was to be my brothers' keeper. There were three of them, all in turn sure to pass the way I was then going. I could help by example and precept to guide their feet into the way of life. There was a way to death, and it was frequented by those whose steps take hold on hell. There were commands of God, and they were pointed out to me. And behold he had set before me that day life and death. He urged me with tears to choose life, and I chose it. And how many times since I have thought of him in glory, and whispered, “Father, I thank thee.”

His arm was around me while we worked. Not literally, of course, but potentially. Whether weeding the garden by his side early in the morning, or doing the chores in the barn while he milked, or constructing my rude toys in the shop where he worked, I felt always his protecting and stimulating presence. He was never too busy to sharpen the tools I had dulled, to teach me a better way to build a watermill, to examine and judiciously praise my astonishing mechanisms and my surprising drawings. How he laughed when my three-wheeled clock actually ticked! And what cor-

dial pats on the back I received! His appreciation, his praise, his encouraging suggestions, were the very bread of life to me.

And his arms were around me when I confessed my sin. Never shall I forget that day. I had willfully disobeyed his command about throwing stones in the village square. I had thrown one through a shop window. Upon Mother's suggestion I confessed the whole miserable business and asked his forgiveness. I was not whipped, I was not scolded; I was just taken in his arms and forgiven, and told to go in peace and sin no more.

The last time he ever held me close in his arms was the evening I told him I had decided to live a Christian life. The night before at a meeting in a neighbor's house his many prayers had been answered. With fear and trembling I had arisen behind a big gas burner, and said, "I want to be a Christian; so help me God." or something to that effect. I was so frightened at the time that the exact words made no lasting impression on my mind—only the supreme act.

That night I said nothing about it at home. The next morning I told mother, who kissed me tenderly and dropped a joyful tear on my face. That afternoon she advised me to tell father. I knew he would rejoice, but somehow I dreaded to tell him.

I selected the moment of twilight when he was milking in the gloomy barn. I can hear now the swish of the hay as the cows drew the wisps into their mouths, and the soft purring of the streams of milk as they plunged into the frothing pail. I was waiting just within the shadow by the door too timid to go near him. I could hear my own heart thumping in my throat. 'Twas December, and a bitter night. At last I crept in and stood beside him.

"Hello, sonny!" he said.

"I've come to tell you," I stammered out, "that last night at the meeting I told them I had decided to live a Christian life."

There was no reply. I stood looking at the top of a webby window where the last red ray of the evening struggled through into the gloom. Ought I to say any more? What could I say? Just then he finished milking. Throwing the stool into an empty crib, and placing the full pail carefully to one side, he came to me in the darkness and wrapped his dear arms about me.

"Henry," he said, "you will never know how happy you have made me until a boy of your own says that same thing to you." And a sob of joy broke from him as he kissed me on the forehead.

It is almost thirty years since then. The good man has been long with his Master. My boys have said the same great words to me, and I know something of his heart that night; but the memory of that hour is so vivid, so precious, I wonder if any act of mine will

ever mean as much to my children as that means to me. Will they think of me as the man who put his arms around them?

I hope so, and I have reason to believe that the main lines for such a memory have been already laid in. The highest compliment I ever received came from little "Blessed" when she was but three years old.

"How many brothers have you?" asked a neighbor who loved to hear her talk and came in for that very purpose.

"I have three," was the answer.

"Three! I thought there were two. What are their names?"

"Loncie, and Tedo, and Papa."—*The Congregationalist*.

TEMPERATURE IN THE HOME.

DR. SHIRK.

WHEN we speak of health in the home we mean the ways and provisions by which health is maintained in its normal condition, and how to prevent disease, or if disease already exists, the means that should be used to assist the doctor in restoring the patient to health.

We will confine ourselves in this article to the temperature in the everyday living rooms, or to heat and ventilation, especially in winter or the time of year when the weather is cold enough for artificial heat.

The rooms in use should be well and evenly heated; that is, not very warm for a while and then soon be very cool.

The temperature should be kept as near as possible on an average between 68 and 75 degrees Fahrenheit, and in order to do this correctly every home should be supplied with an ordinary weather thermometer, which should be hung on the wall about five feet from the floor on the opposite side of the room from the stove.

More rooms are kept too warm than too cool, and you will find after the installation of the thermometer in the home that the usual temperature of your room has been eighty to ninety degrees, but as soon as you have accustomed yourself to the change you will notice that you feel much better than you did in the overheated atmosphere.

Ventilation is as important as heat and there should be, at all times, a small opening to the outside, to allow the impure air to pass out and the pure air to come in, and the best or most convenient place for this opening for a room heated by a stove is a window. Lower the top sash a little and keep it open during the entire day in the room in use. In the sleeping rooms at night the sash should be opened more than for day use; sleeping rooms should be cool, and sufficient cover should be used for comfort and not enough to produce sweating. The window should not be opened from the windy side if a draft goes over the bed.

In conclusion I wish to say if people would adhere

more closely to proper heating and thoro ventilation, they need not fear to allow the children to get an abundance of fresh air. Let them run out and in, and they will not be troubled with colds like the people who keep over-heated houses and do not allow their children to peep out of the door.

I hear you say, "Well, if my children were as tough and rugged as my neighbor's I would let them run." Dress them comfortably and try them, and soon they will be as rough and ready as your neighbor's.

Lost Springs, Kans.

"A WORD TO THE WISE."

LILLIAN M. WIRE.

"As I was taking a walk this morning," said Mrs. Evans, "I called on a blind lady. She looked so lonely and sad that I pitied her. Although aged, her health is good, but her eyesight is gone. And to sit in the darkness day after day, it must be lonely.

"As we conversed together her face brightened. 'I have eleven in the blessed country over yonder, and I'll make the twelfth. Praise the Lord!' murmured the dear old lady fervently. 'There was a sweet little granddaughter, but could I care for her as the loving Father is doing? Ah no!

"I think of the home where the lost I shall find,
And I murmur no more, I'm blind, oh! I'm blind."

"On the way home I met Grandfather Neebal. He is very deaf but I stopped and spoke a few sentences to him. Although it was necessary to speak in a very loud tone, he looked at me so gratefully that I felt well repaid. As my home was nearly reached, a neighbor invited me in for a cup of tea. While the hostess was preparing the meal, I talked with her mother who is a little neglected but intelligent. She looked happy to be noticed even for a few minutes.

"And," concluded Mrs. Evans, "I have determined to *talk with* the old people. To interest myself in them."

You who are young and active can have no idea how lonely it is to sit with folded hands. Remember, the time is coming, young people, when *you*, too, will be unable to carry life's burdens. So give the dear old people a smile and converse with them even though their ears are a little deaf, for they will soon be attuned to the music of heaven.

"PORCELAIN ware can be mended with ordinary putty mixed with oil. Work a small particle into the worn place, set it aside for several days and food can be cooked in the vessel without danger of the unpleasant taste one naturally supposes will take place when putty is used."

"PEACH stains on a dainty frock will disappear if washed with grain alcohol. This can also be used on a delicate print without injury to the color."

The Children's Corner

FAITHFUL FRANKIE.

HATTIE PRESTON RIDER.

"I THINK I lost it in the flower-garden, Molly," said mama, as she went down the steps. "I wish you'd look," She stooped to kiss Frankie. "Good-bye, sweetheart. Take good care of Aunt Molly."

Frankie and Prince watched the carriage out of sight. Then the little boy came back into the sitting-room. Such a splendid plan had popped into his curly head!

He found Aunt Molly putting a cold compress on her head. "Oh! dear," she said. "I've a dreadful headache! I dared not tell your mama, for fear she'd worry. Frankie-boy, could you dust the chairs, and set the table? She wanted me to look for her silver thimble, too. You know it once belonged to your dear grandmother."

That was Frankie's own precious plan, to find the lost treasure, and "s'prise" mama. He did not tell Aunt Molly, though, but went cheerfully to do her bidding. When that was finished, however, the lawn must be sprinkled and the chickens fed. Frankie's little face grew very long as he trotted patiently from one task to another. The climax was capped, just as Aunt Molly said:

"Now, little comfort, you may go and play;" for Mrs. Curtis called at the side door.

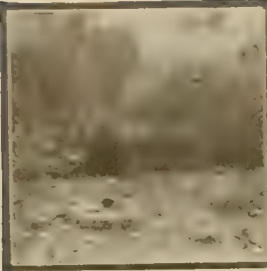

"Rena has hurt her foot; won't Frankie come and stay with her, while I run over to my sister's?"

Frankie went. He and Rena were the dearest friends, and he could look for the thimble when he came home. So the afternoon passed, and it was pink sunset when at last Rena put away the paper dolls. There was yet light enough. At Frankie's own door Aunt Molly met him, cured of her headache, and with a big cookie in her hand.

"Mrs. Moore left this for you, dearie," she said, "and will you run to the store and get her a yeast-cake? Supper is all ready."

Poor Frankie! There was a big lump in his throat as he and Prince passed the flower-garden on their way back in the dusk. Two great tears blinded him, so that he stumbled and fell flat on the gravel walk. As he got up, swallowing a sob, something bright at the edge of the grass caught his eye. His shout of delight sent the tears flying. It was the thimble!

"He has been the very best and sweetest little man," said Aunt Molly, as she turned her sleepy armful over to mama, that evening. And somehow, mama seemed even more pleased at the words, than at the "s'prise" of her precious thimble.

THE QUIET HOUR

THE HIGHER LIFE.

MARTHA SHEPARD LIPPINCOTT.

Can I but make a sad face bright,
And tear-dimmed eyes make smile,
And comfort bring to aching hearts,
To give them joy awhile,
I'll feel my life has been well spent,
Though wealth I may not gain.
I would prefer the higher life
And true to it remain.

I do not wish to sell my soul
And live for worldly wealth;
But I would rather help improve
A nation's moral health;
And teach mankind to upward look
To nobler aims of life,
Instead of spending all our lives,
For mammon's selfish strife.

Philadelphia, Pa.

WHAT IS RELIGION?

RICHARD BRAUNSTELIN.

THIS much-vexed question of who has the only right opinion in regard to religion, can never be settled on earth. The best starting point seems to be to affirm that religion is *genuineness*. It is inferred it means a *faith*, and a *worship*, a belief in *God* and a great *hereafter*; and if, with this we harness genuineness, it makes a strong team for heaven. Almost every one possesses some kind of a religion, and he who boasts he has none is about as practically useful to the masses of the great hungry race as the starving fanatic trying to prove by a long fast that man can live on a little water and a good deal of air.

After all, it does not matter what one's digressions of opinions, if they are based upon God and verified by a genuine life. Many men, then, are of many minds, and not even broad areas can keep men from coming in contact with diversities of opinions. There must be the rubbing against each other and the sparks of friction flying, else half the warmth of life is lost.

A person of any kind of a decently-straight backbone chooses to assert his individuality, and act, express himself and live in a manner peculiar to himself, his own ideas of religion, and his interpretations of Christ's teachings. Whence it is that the question—What is real religion?—is so largely agitating the world today.

There is something wholesome in radical individuality in Christianity, for when men and women of such character are to be found it takes away the milksop pretense-of-religion-kind-of-life, that is apt to become monotonous. All over the world are such characters to be found—those who assert righteousness—who stand out like drawn swords unsheathed for conflict, or the free lance glittering for what they regard to be right. The person who will not lend himself, who will not be a cipher in a crowd or an atom in a conflict, but who will speak what he believes to be true, and live what he believes to be right, is the one to win before God and man.

True religion is progressive, and progression is a pot full of activity, that in order to achieve perfection must be kept boiling continually. *There is no such thing as a passive religion*; it must be active or die. Everybody knows the chemical analysis of stagnant water; it is full of all manner of squirming animalcules, visible and invisible, of no earthly use to anything but swarms of flies or musty glossaries.

Religion means *life, work, action!* It means a live man, not a half dead one. It means integrity, charity, unselfishness, sacrifices. It means God first, then honor, sincerity, truthfulness, purity and a white soul. It means every attribute of Christ's character. And let one follow any other line than this and sooner or later the pox marks show themselves, and he becomes scarred with stoicism. Right here it is well enough to add that the cultivation of all these attributes is no holiday play. True religion requires great indefatigability. In fact indefatigability *never lets go*. It is a very practical essential in the upbuilding of a Christian character; it is the vice that grips to its object; it is the glue that holds the weaker parts together. The world applauds indefatigable reformers, politicians and scientists. But above all give us the indefatigable Christians! Those who stand the test, those who hold fast, those who never let go. Those whose religion makes them *better, happier, gladder, freer*. Those who joy today, tomorrow, next week, next year, *forever!* Whose religion is never mournful, never lugubrious nor funereal; who criticise only themselves, not their neighbors, who joy perpetually because to honor God and do right, *is joy*.

Above all give us a religion that makes one glad, not

sad; a religion that the chirpings of the very birds in the grasses, twittering in the tree tops, or with bursting throats whirling in mid-air send back to the heart happiest notes of joy, rippling, liquid and clear, like crystal drops over pebbles of silver, rather than recognizing them always as the notes of a mourning dove with all its oppressive foreboding.

Should not religion be a something represented and lived as to be surpassing joyous and uplifting? Should we ever be gloomy or exacting, dictatorial or censorious? God forbid! It should be of deeds, not pretensions; of "possessing" not merely "professing"; of earnest heart-striving and of prayers.

It should be of the highest allegiance to God, of the most golden genuineness, the most enobling unselfishness and a character that is as broad as the sea and as lofty as the sky; a character God-given, that beareth all things and forgiveth all things.

SEPARATION UNTO.

"SEEMETH it but a small thing unto you, that the God of Israel hath separated you from the congregation of Israel, to bring you near to himself?" (Num. 16:9).

The thought of separation, so inseparable from true and growing Christian life (John 17:16; 1 John 2:15), is sometimes invested with an unnecessary sternness because it is only viewed in one aspect. Young Christians are taught to think "separation from. . . ." a hard thing, because they do not see how it is far more than outweighed by "separation unto." Let us think a little of this bright and beautiful side of it.

There is no true separation from the things which Jesus calls us to leave, without a corresponding separation unto things which are incomparably better (Mark 10:29, 30). One hardly likes to speak of it as compensation, because the "unto" is so infinitely more than the "from"; it is like talking of a royal friendship compensating for dropping a beggar's acquaintance, or the whole Bank of England for a brass farthing, or palace life for giving up workhouse life! (Philpp. 3:8; 1 Cor. 3:21-23.)

First, and chiefly, we are separated unto the Lord himself (Psa. 4:3). He wants us not only for servants, but for friends (John 15:15); and he makes the friendship a splendid and satisfying reality. He wants to bring us "near to himself," that we may be a "people unto him" (Psa. 148:14). He will not have a half possession in us, and so he says he hath "severed you from other people" (Lev. 20:26). Why? "That ye should be mine." "Chosen unto himself." "His peculiar treasure," separated from among all the people of the earth to thine inheritance (Titus 2:14). Is it a "small thing" thus to be the Lord's Nazarite, "holy unto the Lord all the day of his separation" (Num. 6:8)? Is any earthly crown to be compared

to the consecration (margin, separation) of his God upon his head (Num. 6:7)?

We are separated also to far happier human friendships than the world knows (1 Thess. 2:17-20). There is no isolation intended. The Lord is able to give much more than this (2 Chron. 25:9). Those who separated themselves from the people of the land unto the law of God, "they clave to their brethren" (Neh. 10:28, 29). That is just it; we may lose people, but we find brethren, with all the love and pleasure and freedom of intercourse—yes, and joy—which that relationship brings. Is not this "much more" than the society of "people"?

But we do not get this, perhaps do not even guess at its existence, as long as we try for both (Matt. 6:24; James 4:4). Both means neither, in this case; we are conscious of the hollowness of the one, and we are not separated unto, and therefore cannot possibly know the enjoyment of the other.

Then we are separated unto work, "the work whereunto I have called them" (Acts 13:2); very different kinds, but to every man his own work (Mark 13:34), and thereby an end of all the gnawing purposelessness, and down-weighting uselessness, and miserable time-killing, and sense of helpless waste of life. Ennui is no part of a separated life; there is no room for that wretchedness any more. "Whose I am, and whom I serve" (Acts 27:23) fills it up. Some are separated more especially "to bear the ark of the covenant of the Lord" (Deut. 10:8). Some only stand before him, it may be "by night" (Psa. 134:1), so that "songs in the night" may ascend to his glory (Job. 35:10). Some in a thousand ways "to minister unto him," to his poor, to "his prisoners," spiritually or temporally; always "unto him" in his representatives. But all to bless in his name; for praise is the invariable service of separation.

"Ye see your calling" (1 Cor. 1:26); is it not a high one? "Seemeth it but a small thing to you?" Seemeth it too stern a thing? Is it not rather a "better thing" than fallen man could have dreamt of aspiring to (1 Cor. 2:9, 10)? a brighter life than has entered into the natural heart of man even to imagine? Is it for you? Listen! "Be ye separate," and, what then? "I will receive you" (2 Cor. 6:17). "This is his commandment" (John 3:23) to you, and this is his promise. Will you obey? Then you shall know a little, of that unspeakable blessing of being "received" by the Father, until the day when Jesus shall come again and receive you unto himself (John 14:3) for the grand separation of eternity with him (John 17:24).

"As by the light of opening day
The stars are all concealed,
So earthly pleasures fade away
When Jesus is revealed."

—Exchange.

ECHOES FROM EVERYWHERE

In Germany they are now making false teeth of paper, the teeth being prepared from wood pulp such as is used in making various paper novelties. It is said that the teeth give satisfaction and are not as likely to chip off as the ordinary false teeth.

Figures just made public by C. L. Wilbur of the census bureau show that the fight against tuberculosis is being won. The total number of deaths from all forms of tuberculosis returned in 1908 was 78,288, exceeding those of any previous year of registration, but the death rate per 100,000 for 1908 is considerably less than that for 1907.

The Canadian Pacific Railroad has found the telephone so serviceable for train dispatching that the present system of about 500 miles of telephone lines will be extended to 1,000 miles within a year. The company states that about fifty per cent more traffic can be handled now than was possible under the old telegraph system of dispatching.

A religious census taken some time since of the Harlem district of New York City showed, in a population of 147,000, 6,138 Jewish families, of whom 4,941 declared themselves without church homes. The same statement was made by 1,281 of the 4,046 Protestant families visited, but by only 288 of the Roman Catholic households interviewed.

The terrific hurricane that visited Key West, Fla., and neighboring regions about Oct. 11 did damage amounting to several millions of dollars, and caused some loss of life. Business in the stricken district will be crippled for weeks. The results would have been even more serious if the weather bureau had not given timely warnings that the storm was coming.

Arrangements are being perfected in New York for the incorporation of the American Radium Institute, to be devoted to the treatment of cancer and similar diseases. Those who are interested in the enterprise are eminent surgeons, chemists, physicists and other professional men, and it is intended to minister to deserving patients free of charge. A meeting for organization will take place next week.

Edwin Ginn, of Boston, is preparing to establish an international school of peace with a permanent foundation of \$50,000 and an endowment at his death. "The school is intended to provide permanent legal machinery for receiving and disbursing contributions and bequests toward international peace, and connected with it will be a bureau of education to attempt to modify courses of study in schools, colleges and universities so as to minimize the achievements of war the world over, with an international exchange of teachers and pupils, in accordance with principles of the Rhodes scholarships."

A consolidation of practically all window glass factories that operate without machine blowers is promised. Representatives of factories from all over the country have been in session and it is declared that the object of the consolidation is to carry on a straight out fight against the American Window Glass Company's machine-made product. The new company is to be known as the Imperial Window Glass Company, and it will be capitalized at about \$10,000,000.

The French minister of justice has just issued some significant statistics: Out of 100 persons convicted of murder, 53 were confirmed drunkards; out of 100 persons convicted of arson, 57 were confirmed drunkards; out of 100 persons convicted of begging and vagabondage, 70 were confirmed drunkards; of 100 persons convicted of assault, 90 were confirmed drunkards; of 500 persons convicted of all offenses, 323 were drunkards, or two-thirds of those convicted for various assaults were drunkards.

The management of the Erie claims that this road has not killed a single passenger in five years. During that time it has carried a total of 3,750,000,000 of people, and its passenger trains have run a total of 50,000,000 of miles. The road has been able to make this record partially on account of the fact, it is claimed, that passenger trains are not run at a higher rate of speed than track and road-bed conditions warrant. The Vermont Central claims not to have killed a passenger in seven and one-half years.

Before starting to teach Lieutenants Lahm and Humphries the operation of the recently acquired government biplane, Wilbur Wright tried the machine out on October 9th and had his pupils time him for a distance of a kilometer in a closed circuit. This distance, including the turn, was covered in 48 3-5 seconds, or at a speed of exactly 46 miles an hour. Allowing 100 meters extra for the turn, the speed was 50 miles an hour. Thus it seems that the new government aeroplane is quite as fast as the Bleriot or Curtiss machines, which made over 47 miles an hour at Rheims.

The accounts of disturbances in Persia which come to the outside world are sent direct from the operator in Teheran to the operator in London. No other operators handle the messages at all. Of course there are repeaters along the route, but these are automatic. The distance by the wire is 4,000 miles and repeating takes place at ten points along the route. The first station out, from London is at Lowestoft, whence the route runs under the North Sea and arrives at Emden, 200 miles away. Here it is automatically repeated, and then again at Berlin, Warsaw, Rouen, Odessa, Kertch, Sukhum, Kaleh, Tiflis, and Tauris, from the last of which it arrives at Teheran. The line is continued from Persia to India, but on the rest of the route there is no automatic circuit so long as this one.

J. Pierpont Morgan has purchased Marsden J. Perry's collection of antique Chinese porcelains, consisting of nearly 300 flawless specimens. The price paid was between \$500,000 and \$600,000. Mr. Morgan has lent the collection to the Metropolitan Museum of Art, of which he is president, and there it will be exhibited soon in connection with the Garland collection, which he also owns. The Garland pieces are considered to be worth \$1,500,000.

Every new means of killing soldiers during war time is hailed as a grand improvement. The Colt Arms Co. is now making for the war department a lot of new machine-guns of the French Benet Merie design, for use in our army, and they will be the most murderous weapons of the sort ever produced. They are so light that one can be easily carried on the back of a man, yet they will kill a man two miles away and fire 400 shots per minute simply by the turning of a crank.

The owners of a St. Abbs fishing boat have made the important discovery that a net dyed as nearly as possible the hue of the sea, instead of the traditional brown, yields much larger results in the matter of fish caught. The discovery was, says the Western Morning News, put to the test a short time ago, when, out of a fleet of sixty-five boats, the boat with its nets dyed blue made far and away the largest catch. The dye used is bluestone. The discovery has aroused much interest among the fishermen.

Insurance of various kinds as a provision against misfortune is gaining ground rapidly in Germany. When a boy starts to work he must take out insurance, even if he works only a little outside of school hours. The insurance is to take care of him in case he gets sick or is injured or lives to an age when he can no longer work and has to be pensioned. About half of the entire population are insured either against sickness, accident, or old age. The system is backed by the government and is a part of Bismarck's state socialism policy.

The present year continues to maintain its unenviable notoriety for the seriousness of the iceberg peril. Today icebergs are as numerous about the Newfoundland coast as they have ever been in midwinter, and more numerous than at the same time in any year of the past quarter-century. The whole of Newfoundland's eastern seaboard, and the Grand Banks also, are thickly strewn with these floating islets, that spell destruction for every vessel that touches them, and all sorts of shipping, from the humblest fishing-smack to the largest liner, are subjected to exceeding peril, and, in many cases, to serious actual damage. Daily the steamers plying these waters report sighting scores, if not hundreds, of bergs, and one passenger ship from New York to this port counted over a thousand during 24 hours.

While Japan is making her position in Manchuria as solid as possible, Russia is not neglecting her interests in the Far East. Under the stimulation of new laws for the encouragement of migration to Siberia nearly a million and a half of people have gone from European Russia and settled in that region in the last two years. Siberia has a reputation for being a cold and inhospitable country, but so had America and Canadian Northwest before they were well known. It is now being found that much of Siberia, especially north of Manchuria, is a good country for stock and grain raising, and it is Russia's ambition to supply her food requirements largely from this region in the future.

Having digested and annotated the great mass of testimony in the famous "Brownsville case," the military court, Lieut. Gen. Samuel B. M. Young presiding, is ready to work. By order of President Roosevelt more than 100 members of Companies B, C and D of the Twenty-fifth infantry, negroes, were discharged without honor for the shooting up of Brownsville, Tex., on August 16, 1906. The court, composed entirely of retired officers, will pass upon applications for re-enlistment made by any of the discharged soldiers.

Peat, as it comes from the bog, contains from 85 to 95 per cent of water. According to Dr. Ekenberg, it appears that the peat contains a hydrocellulose which is of the nature of a jelly. If the peat is subjected to pressure the hydrocellulose passes through very much as soft soap might, and without separating the water from the peat. If, however, the peat is heated to about 320 degrees F., this jelly is immediately destroyed, and most of the water can be separated by a pressure of about 240 pounds per square inch.

Hazing of students seems to be more general this fall than usual. Even in Washington, where law and order are supposed to reign supreme and race distinctions to be unknown, a Japanese boy was driven out of the high school by a student mob. As a rule the school authorities ignore such lawlessness, but at Allentown, Pa., the entire sophomore class of Muhlenberg College have been suspended for a month for hazing some freshmen. In several cases recently students who have tried their hazing tactics on the wrong subject have been met with force and wounded.

That the government has been defrauded out of untold millions of dollars through false weighing and other devices at the port of New York, and that the extent of losses from this source cannot even be estimated, is the information Collector Loeb has brought to the treasury officials. Much has been made of the sugar weighing frauds, as a result of which the government brought suits totaling \$10,000,000 and later accepted a compromise on a basis of \$2,000,000, but there is no longer any question in the minds of Mr. Loeb and the treasury officials that the losses on other merchandise of various kinds amount to many times \$2,000,000. The treasury is arranging to have automatic weighing apparatus installed at New York and it is the intention to do all weighing with automatic scales in the near future.

Messages from Bellpat in the Baluchistan earthquake zone, sent via Simla, say that all of the public buildings and the railway station, together with many private houses, have been destroyed in an earthquake. Twenty-five dead and many seriously injured have been taken from the ruins. Bellpat is about 217 miles from Quetta, in the heart of the wildest country in British India.—Reports received at Catalina, Sicily, Oct. 22, from Acireale indicate that while only one person was killed in the earthquake there, at least ten houses were wrecked. The walls of many houses were cracked. The whole Mount Etna region was shaken.—Mount Vesuvius is again very active. It is throwing up quantities of stone.—A heavy earthquake shock lasting fully a minute was felt at Cape Girardeau, Mo., Oct. 23. Buildings rocked and the earth seemed to undulate. Loud and deep rumblings accompanied the shock which seemed to move from east to west. The shock was the heaviest felt in many years. No damage is reported.

Among the Magazines

THE IDEAL UNIVERSITY.

The word "university" means, in our modern usage, so many different things that almost every time one employs it, it seems necessary to define it, says Woodrow Wilson, President of Princeton University. Nowhere has it so many meanings as in America, where institutions of all kinds display it in the titles they bestow upon themselves. School, college and university are readily enough distinguishable, in fact, by those who take the pains to look into the scope and methods of their teaching; but they are quite indistinguishable, oftentimes, in name. They are as likely as not all to bear the same title.

The American university as we now see it consists of many parts. At its heart stands the college, the school of general training. Above and around the college stand the graduate and technical schools in which special studies are prosecuted and preparation is given for particular professions and occupations. Technical and professional schools are not a necessary part of a university, but they are greatly benefited by close association with a university; and the university itself is unmistakably benefited and quickened by the transmission of its energy into them and the reaction of their standards and objects upon it.

There is an ideal at the heart of everything American, and the ideal at the heart of the American university is intellectual training, the awakening of the whole man, the thorough introduction of the student to the life of America and of the modern world, the completion of the task undertaken by the grammar and high schools of equipping him for the full duties of citizenship. It is with that idea that I have said that the college stands at the heart of the American university. The college stands for liberal training. Its object is discipline and enlightenment. The average thoughtful American does not want his son narrowed in all his gifts and thinking to a particular occupation. He wishes him to be made free of the world in which men think about and understand many things, and to know how to handle himself in it. He desires a training for him which will give him a considerable degree of elasticity and adaptability, and fit him to turn in any direction he chooses.

If the American college were to become a vocational school, preparing only for particular callings, it would be thoroughly un-American. It would be serving special, not general, needs, and seeking to create a country of specialized men without versatility or general capacity.

The ideal college should be a community, a place of close, natural, intimate association, not only of the young men who are its pupils and novices in various lines of study but also of young men with older men, with maturer men, with veterans and professionals in the great undertakings of learning, of teachers with pupils, outside the classroom as well as inside of it.

No one is successfully educated within the walls of any particular classroom or laboratory or museum; and no amount of association, however close and familiar and

delightful, between mere beginners can ever produce the sort of enlightenment which the lad gets when first he begins to catch the infection of learning.

The trouble with most of our colleges nowadays is that the faculty of the college live one life and the undergraduates quite a different one. They are not members of the same community; they constitute two communities. The life of the undergraduate is not touched with the personal influence of the teacher; life among the teachers is not touched by the personal impressions which should come from frequent and intimate contact with undergraduates. The teacher does not often enough know what the undergraduate is thinking about or what models he is forming his life upon, and the undergraduate does not know how human a fellow the teacher is, how delightfully he can talk, outside the classroom, of the subjects he is most interested in, how many interesting things both in his life and his studies illustrate and make attractive.

This separation need not exist, and, in the college of the ideal university, would not exist.—November Delineator.

THE MISSION OF THE UNITED STATES OF AMERICA IN THE CAUSE OF PEACE.

[From Address of Hon. David J. Brewer, Associate Justice of the Supreme Court of the United States, before the New Jersey State Bar Association, at Atlantic City, N. J., on June 12, 1909.]

First a thought, a wish, then a faith, next a struggle, at last a fact. So have entered into human life and history some of its profoundest truths. Such has been and is to be the story of universal peace.

For untold centuries on the battlefield were settled all trivial, all national disputes. Blood was the ink and death wrote the judgment. Yet in the heart was the thought that there must be some better method of settlement, and they who suffered looked longingly for its appearance. But thought and wish were only the shadowy pictures of a dream.

Twenty centuries ago there came a change. The heavens above the plains of Bethlehem were filled with a white-robed choir, and the only song of the heavens ever heard by the children of men broke the stillness of night. Peace on earth was that angel song. In a manger in the little town of Bethlehem lay a new-born child. His mother bent above her sleeping babe, and though the record is silent, you may be sure she heard the angelic song. For no ear is so acute to catch the slightest notes of prophetic song as the ear of a mother. Around the early days of that infant gathered many foreshadowings, and "Mary kept all these things and pondered them in her heart." The child grew to manhood, revealed himself in a short and wondrous three years, and in the "upper chamber," bidding farewell to his few followers, declared, "Peace I leave with you. My peace I give unto

you." The increasing multitudes who have looked up to Jesus of Nazareth as their Leader have taken his life and words as promise and prophecy, and faith in the coming of universal peace is the inspiration of humanity.

"It came upon the midnight clear,
That glorious song of old,
From angels bending near the earth
To touch their harps of gold;
Peace on the earth, good will to men
From heaven's all-gracious King!"

The air above Judea's plain no longer pulsates with the waves of this celestial song. For sad and weary centuries the grand march of humanity upwards has been through strife and blood. But a growing echo of the heavenly music is filling the hearts of men, and the time will come, the blessed time will come

"When the whole world gives back the song
Which now the angels sing."

Now we are in the third era, and earnest men and women are working, determined to put an end to the arbitrament of the sword. The coming music will not tell of the "pride, pomp and circumstance of glorious war," but will be a refrain of the angelic song, "Peace on earth." Our own loved land witnesseth the strength of the struggle and will be the great leader. And this is so notwithstanding present shouting for a larger navy.

I shall not stop to discuss the question whether a state of peace is better than one of war. If any one doubts it I am content to quote the words of General Sherman that "war is hell." The less of hell individuals and nations have the better. In order to bring about the condition of peace a minimum of army and navy is the most effective way. There never yet was a nation which built up a maximum of army and navy that did not get into war, and the pretense current in certain circles that the best way to preserve peace is to build up an enormous navy shows an ignorance of the lessons of history and the conditions of genuine and enduring peace. When one nation becomes so strong that it is able to say to all others, "I am in favor of peace, but it must be a peace in which my will and wish controls," it is morally certain that the outcome of a few years will be war, for it is against human nature to take commands on matters of personal interest or questions of right and justice. The only peace which can endure is that in which the equalities of the nations are recognized, and all disputes are settled by negotiations or submitted to an impartial tribunal for determination. Then all nations will be interested in maintaining peace, knowing that it is peace secured by choice and established in justice. The pathway of history is lined with the wrecks of nations which for a while developed a commanding force, but were finally destroyed by combinations of weaker nations or their own internal jealousies. It may be laid down as a political and historic truth that a peace which is born only of force is a peace which is temporary and disappointing.

To lead in the cause of peace no one of the great nations is so well circumstanced as the United States of America. We are remote in distance and separated by oceans from other nations, so that if one of them were to attack us it would be fighting at long range, and it is obvious that such fighting is most exhaustive and attended with the least probabilities of success. Of course, the same rule would obtain against us were we to undertake an aggressive war, but an aggressive war assumes no desire for peace. In a defensive war our location is a great defense. In the second place, our resources of men and material are such as to almost guarantee against

any attack. Whatever advantage might enure to any nation by reason of its larger armament would be only temporary in its nature and would soon be exhausted by the enormous resources of this country. In the third place, no nation is in such a financial condition. Our debt, compared with that of other great nations, is small, and if we had not been foolish enough to squander money in ironclads and army we might now be a nation without a debt.

Again, there is in the blood of the American people a tenacity like that of the English bulldog, which when once the fight is on will not give up until victory is won. Wonderfully is this illustrated by our great Civil War, when North and South met and fought for four years, keeping up the fight until one side was exhausted, and not until then did peace come. If any nation attacks us it knows in advance that we will fight to the last.

* * * * *

But there is a reason deeper and more significant than the mere matter of ability and safety why this republic should lead in the great work of establishing universal peace. History is not a mere accidental succession of unrelated circumstances. Through the ages one increasing purpose runs. There is an overruling Providence which fashions and shapes human destiny—the destiny of nations as well as of individuals. We may not be absolutely certain of the purposes of Providence, yet we can gain some knowledge of them from noticing events as they come and go, sure that in all the great movements of the nations and of humanity some supreme purpose is being accomplished. I do not mean that there is any fatalism by which the will of the individual or the nation is ignored, but the opportunity comes and the purpose will be accomplished, though the individual or the nation may ignore it and the duty and the glory be passed over to another. As Lowell says:

"Once to every man and nation comes the moment to decide,
In the strife of truth with falsehood, for the good or evil
side."

It was not a mere accidental fact that for numbers of centuries this Western Hemisphere was withheld from the eye of civilization. In a sense profoundly true it was up to four centuries ago a virgin continent,—an untraveled land,—and in the then bringing it within the reach of civilization there was some purpose, which will be accomplished. If I should state in a single sentence that which seems to me the great purpose, it would be that here was to be developed a society and a government based upon the brotherhood of man.

* * * * *

As the leading nation on this Western Hemisphere, surely the open door is before us. If we fail, the cause of peace will not fail. We shall simply stand in history as the nation which lost the great opportunity. Who can say that in case of our failure there will not be developed on our north a mighty republic which will be true to the cause of peace and become its national leader? Indeed, there are possibilities reaching far beyond this. We fancy that ours is and is to be the leading race, the one out of whose efforts the great benedictions are to come to humanity. We are wont to look at the South American states with a feeling of almost pity or contempt, but are we sure that if we fail the Latin race will not be the chosen instrument of accomplishing the Infinite purpose?

* * * * *

While I have an abiding faith that the tendency of American thought and purpose will ere long be reversed, no one can be blind to the fact that there is a persistent

effort to make of this a great military nation. From the football field to the ironclad, from the athlete to the admiral, the thought and the talk is fight. The cry is fight fair, but fight. The capital city has a different aspect from that which it had a few years ago. Brass buttons and epaulets are filling the eyes. Our newspapers are eulogizing the magnificence of our fleet and army, and the thought of the nation is largely in the direction of naval and military advance. Science is giving its attention to the discovery and manufacture of more effective instruments of death, and we are rapidly drifting into an admiration for the "pride, pomp and circumstance of glorious war." At the first Hague Conference we were among those nations calling for a limitation of armament. Now instead of leading in that direction, we are constantly increasing our armament and point with pride to the fact that our naval fighting strength surpasses that of every other nation excepting Great Britain.

* * * * *

Notwithstanding all present opposition, the United States will not fail. She will heed the summons to the lofty mission of peace. The blare of the bugles and the beating of the drum will give way to the song of the angels; and the brotherhood of man, which means peace between the nations, will find its loftiest expression in the unfoldings of our history.—Advocate of Peace.

SOME BELIEFS AND FUNERAL CUSTOMS OF CHINA.

(Continued from Page 1065.)

One who is executed, commits suicide, dies from childbirth, is drowned, or dies any violent death, is supposed to have been a great sinner and great gifts must be made to the temple priests to ward off a terrible punishment from the departed spirit. In case one is murdered it is judged that he has not had a fair chance and he is sent back into the world in some other body to live over again.

In case the person dies with a highly contagious disease the coffin must be taken to a rest house immediately, where it may rest until properly painted and a proper place is found for its burial. In this case there must be no mourning for the dead or crying out. After a lapse of 100 days, mourning apparel may be put on. Generally speaking, however, the coffin is kept in the house for weeks and is painted with great care, in the case of those who can afford it, and less carefully by those who are poorer. Then the search for a suitable place to bury begins. One versed in the Fung-sui is called in and a deposit is made. He then begins his work. The length of time required to locate the grave will vary from a few weeks to months. The grave is generally located on some hill or high elevation. It is supposed that a tiger crouches on one side of the grave and the dragon on the other side to keep the evil spirits away, hence great care must be exercised that neither of these beasts shall be absent else trouble will follow the family of the departed one for all time to come.

The burial of children is by no means a matter of such care. Their graves are very shallow—I have

often seen dogs eating the bodies of little children which they had dug up, or which had never been buried at all. Though the custom is rapidly going out, it has not been uncommon to see little bundles of straw lying around on the hills where little bodies had been left to be eaten by the dogs.

The graves are sometimes very elaborate. Ordinarily they are very shallow, rounded over and cemented on the top with a head and foot stone at either end, but sometimes a grave will take up a good part of an acre of ground.—E. B. Caldwell, in *China Bulletin*.

Between Whiles

"What will your mother say to you when you get home?" said one boy.

"She'll start in by asking me some hypothetical questions," answered precocious Willie.

"What are they?"

"Questions that she thinks she knows the answers to before she starts to talk."—Washington Star.

* *

Excusable.

School children in Greater New York were required some time since to bring to their teachers vaccination and birth certificates. Frequent forgetfulness made one teacher impatient, and word went out that the certificates **must** be there on a certain morning. On that day an anxious little girl raised her hand the moment school opened, and, on being told to speak, said tremblingly:

"Please, teacher, don't get mad at me. I've forgot my excuse for being born."

—October Lippincott's

The Pedestrian in 1910.

Chug-chug!

Br-r-r! br-r-r!

Honk-honk!

Gilligillug-gilligillug!

The pedestrian paused at the intersection of two busy cross streets, and looked about.

An automobile was rushing at him from one direction, a motor-cycle from another, an auto-truck was coming from behind, and a taxicab was speedily approaching.

Zip-zip! Zing-glug!

He looked up and saw directly above him a runaway airship in rapid descent.

There was but one chance. He was standing upon a manhole cover. Quickly seizing it, he lifted the lid and jumped into the hole—just in time to be run over by a subway train.—October Lippincott's.

* *

A kind old gentleman, seeing a very small boy carrying a lot of newspapers under his arm, was moved to pity.

"Don't all those papers make you tired, my boy?"

"Nope," the mite cheerfully replied. "I can't read."—Youth's Companion.

Syracuse, Ind., June 1, 1909.

Mr. James Glass, Big Timber, Montana.

Dear Sir: I arrived home day before yesterday, after a most pleasant and instructive visit to your Montana proposition.

I have been on the lands and investigated the irrigation system of Glass Brothers Land Company, and am convinced that the essentials of a very prosperous community are there, namely, plenty of water, rich soil and much sunshine; and I would say that the fine appearance and phenomenal yields of domestic fruit orchards in the vicinity of your lands, which have no spraying or other care given them, lead me to believe that commercial orchards of great value may be grown on your lands; and I would not hesitate to plant quite liberal of the hardier apples, cherries, plums and pears, and smaller fruits in the berry line.

Because of these conditions I hope and expect to be one of the number to possess these goodly lands.

(Signed) EDWARD DEETER.

Mr. Deeter is a noted horticulturist of northern Indiana and is a son of Elder Deeter of the Church of the Brethren.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

NEFF'S CORNER

Did you notice the three pages of pictures and information about Sinaloa, Mexico, in the 'Nook of Oct. 5? Well, I am planning to be there on the ground in a few weeks and if any of you who cannot go down this fall want some of that cheap land, I expect to be in position to look after the development and cultivation of land for non-residents and can have your land cleared and a crop of bananas ready for you to eat by the time you arrive, if you wish. Or a crop of corn, alfalfa, cane or cotton (or 'most anything else you want) can be started in a very short time. 5,000 acres of the Culiacan Colony lands have been sold to Americans this season and we expect a busy settlement of congenial neighbors there in the near future. Many people are going from southern California into Sinaloa and buying at \$25 per acre as good land in as good climate as they see selling in their own country for more than \$2,500 per acre. They are acquainted with that kind of a proposition and they see that an advance of from \$25 to \$2,500 per acre is likely to be made on the west coast of Mexico in about as short a time as it was made in California. My judgment is that he who secures a block of that land now (you can buy it in blocks of from 10 acres up) will have one of the best investments he ever made. I take it that most Nookers are people "of the right stripe" and I'd like to have a few of you for neighbors. If you want a block of land adjoining me, let me hear from you soon.

Address for the present,
JAMES M. NEFF,
Clovis, New Mexico.

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

YOUR CHOICE OF LOCATION

"Church Extension by Colonization" is our Motto. We are locating our second Colony, with others to follow in other states in the near future.

COLONY NUMBER ONE

is located in the famous San Joaquin Valley, in "Sunny Stanislaus" county, near the center of California, adjoining the new town of EMPIRE. An organized Church of the Brethren is holding regular services and Sunday school in the new colony.

This location was selected because of its fine climate; snows and thunder storms are unknown there; because of its rich soil and fine irrigation system enable a great variety of crops to be grown; and because the excellent transportation facilities to the nearby markets make it easy to dispose of the products to good advantage.

Alfalfa is cut from four to six times a year, yielding from five to ten tons of hay annually, which sells from \$10.00 to \$15.00 per ton. All kinds of stock, dairying and poultry are handled with profit. The alfalfa remains green all winter.

All kinds of California fruits, nuts, berries and truck can be grown here, yielding good incomes.

A good Dairy Cow will yield about \$120.00 annually.

WHAT OTHERS SAY

A Pennsylvanian who has lived near Empire for five years says: "I am raising alfalfa only; that which was one year old and over, yielded nine tons per acre this year. We have 90 acres in alfalfa and are preparing to seed 100 acres more."—J. M. Bombarger.

A North Dakotan feels this way: "I will frankly say that the Empire location has more good points

than any thing I ever saw, you should not have much trouble in locating people here, even if prices are a little high.

Personally I am partial to the land around Empire. After about three week's investigation I find the land almost faultless in location, soil, drainage, railroads to markets. It will stand the very closest inspection."—J. W. Deardorff.

COLONY NUMBER TWO

This colony is being located near Portage la Prairie, Manitoba, in the great wheat Belt of Canada, about sixty miles west of Winnipeg, the Chicago of Western Canada, a city of over 100,000 population.

Four trunk-line railroads pass through the section in which the colony is located, giving excellent transportation to nearby markets. The raising of stock, wheat, oats, barley and grass are the principal pursuits here. Immense crops are grown annually of these cereals, wheat yielding from 20 to 40 bushels per acre. Lands are little higher here than in the newer sections; wheat brings from 10 to 15 cents per bushel more than in the western provinces. Homeseekers will find it advantageous to investigate our colony propositions here and elsewhere. Write us for fuller information about prices, terms and special rates for homeseekers.

Read and Learn OF THE Great Future for Miami Valley in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

FARMERS DEVELOPMENT COMPANY
Springer, New Mexico.

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, post-paid. Order any one form or assorted.

Ask about our "One Dollar Cradle Roll Outfit."

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful

reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA,
IDAHO, OF SEPT. 30, 1909.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Scam, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

A TRIP TO OLD BALDY

H. A. BRANDT

ONE of the best-known but by no means highest peaks among the mountains of Southern California is that grand mountain affectionately named "Old Baldy." This mountain is the highest peak of the San Gabriel Mountains that lie just to the north of the broad fertile valley of the same name. It is only a trifle over ten thousand feet in height and lies well back of the foothill ranges, but its massive head, practically denuded of vegetation except for a few pine trees, is a splendid sight when snow-crowned in winter. As summer draws on the fields of snow melt away into icy brooks that tumble on down rocky canyons only to find themselves at last captured and led out to water the thousands of acres of orange and lemon groves that thrive in the upper end of the San Gabriel valley. Even in midsummer with snow all gone Old Baldy is still true to her name, for the bare whitish slopes of shell rock about that peak suggest something of the glorious whiteness of the winter's snow. White-capped alike in winter and summer, Old Baldy can not help but stand out as one of the great natural landmarks of Southern California.

For a number of years I had lived within forty miles of the summit of this grand old mountain but for some unexplainable reason had never climbed to its top. This summer the record was broken and one bright Monday morning in August I started for Old Baldy. About an hour's ride on the railroad brought me to Ontario, California, and here I made connections with an electric trolley car that brought me to the mouth of San Antonio Canyon after another ride of perhaps forty-five minutes. Here some friends who were camping in this canyon met me with saddle horses and by twelve thirty o'clock we had arrived at Camp Baldy, the end of the stage road that runs up San Antonio Canyon.

Camp Baldy is a regular mountain resort forty-seven hundred feet above sea level and seven miles from the top of Old Baldy. Here about four hundred people were enjoying an outing in the mountains. The com-

pany that controls the canyon has almost civilized "camping out," for one may enjoy such luxuries as a regular automobile-stage passenger and mail service, a store where groceries are sold almost as cheap as at home and live in tents with board floors and electric lights with the best of water within a stone's throw. One cannot, however, camp in such a place for nothing, for the spirit of commercialism has polluted even the mountains primeval and all these conveniences cost money just the same as they do at home.

Well, to come back to my story, it was a little too late to try to climb Old Baldy in the afternoon of the day of my arrival, so we simply contented ourselves with a preliminary climb along the west side of San Antonio Canyon to see that we were in trim for the morrow—the day set for the ascent of Old Baldy.

We returned in good time to camp that evening and having prepared our lunches for the morrow and assembled guns, canteens and walking sticks we were off to bed by eight o'clock. That is all I remember until one of our party helped me to regain consciousness about half past three the following morning. We were urged to omit any preliminaries that might be a part of the usual leisurely manner of arising and dress at once, for it was already a little late! Of course we obeyed and after a hasty breakfast were on our way by ten minutes after four o'clock.

It was pretty dark when we left Camp Baldy but when the trail took us into a narrow canyon well shaded by trees and we had to almost feel for the trail and once or twice light matches so that we could cross the little stream that leaped down the canyon over the rocks and fallen logs, the situation was by no means improved. But this did not last long, for the trail so led higher up on the mountain side and this together with the growing light of coming day made the trail quite plain enough. Before sunup we were at Bear Flats where we hoped to at least get sight of something big enough to shoot but were disappointed. This was

the last place that we could get water so after a short rest we hid the guns in some underbrush, filled our canteens with water and were off again.

The trail now took up the mountain side, zigzagging back and forth so as to reduce the grade. By sunup we were well up about three hills back of Bear Flats and beginning to be able to see out the San Antonio Canyon to the broad valley beyond. By eight o'clock in the morning we were overlooking the lower ranges at the base of Old Baldy and from here we had our clearest view. To the south, southeast and southwest the country lay stretched out before us. Broad roads had become mere lines, towns but a group of various colored specks, the fields and orchards looked like a kind of natural checkerboard spread out in the valley below and the whole scene reminded one of a gigantic map of valleys, mountains and plains done in relief work. Such sights are only seen from mountain tops! We had begun our climb to the tune of,

"The trials of the road will seem nothing
When we reach the end of the way"—

and indeed they were forgotten as we stood on our throne hill that glorious August morning. Away to the south and southwest lay the Pacific Ocean like a great low bank against the sky, and rising out of it like mountain tops above a mist lay Santa Catalina Island, and farther off to the southwest in tracings that could just be seen were the jagged outlines of the mountainous San Clemente Island, perhaps one hundred miles distant as the crow flies! As I stood there and looked out over the broad sweep of mountain, plain and sea to the isles that dimly lay beyond I could not help thinking of Moses on a mountain top of Moab viewing the promised land. What must have been his thoughts when he looked out over Canaan—so far that lines were lost in distance, and then remembered that this was all the gift of God to the hosts that he had led from the slavery of Egypt!

Time and again we paused to enjoy the splendid sight of mountain ranges and great broad valleys basking in the summer sun or boylike rolled stones down precipitous mountain sides. At last we reached the top! To the north was the broad Mohave Desert, to east and west we looked down the length of range after range of mountains while to the south lay the richest and best of Southern California, the great stretch of mountains and valleys comprising parts of Los Angeles, San Bernardino, Riverside and Orange Counties. Such a view as this we had from our "Old Baldy" is only had when one climbs to the top of a prince among the mountains.

Bethany Bible School, Chicago, Ill.

MOUNTAIN-TOP views enable us to do better work in the valley below which reveals greater opportunities from the heights than at short range.

DIVINITY OF MIND.

J. S. FLORY.

IN the whole field of science there is nothing so puzzling to the thinking powers of man as the mentality of the man himself. When we say field of science we mean the simple meaning of things, the *what*, *why*, *whence*, of things we see, and feel, and of whose existence we have conscious evidence. We can say *Divinity* is the term used in the sense of the supreme powers of the universe. That is to say, there is a something we call *God*, *first cause*, the Author of all things around and about us. It is a self-evident fact that things do exist and are apparent. It is not enough to say God is the Creator of all things visible and invisible, animate and inanimate. We may speculate and say as to man. He is called man because he can think. has reasoning powers superior to a lower order of creation. Yet why this is so is not answered by the admission. Man may have a living organism, but "*What is life?*" stands up in the multitude of queries that confront us; and who is able to meet the question satisfactorily?

In all the great questions that have engaged the attention of scientists since the world began, the one thing yet lacking is a satisfactory solution to the mind of the man who wants to know. Like the inquiry, "What is God?" All along the line is a blank silence; it is past finding out. Yet it is possible we may get an analysis of understanding comparatively correct: at least so far as to satisfy the longing desire of the reasoning powers of the human soul, as we say.

In our investigation of the question, in order to be safe it is necessary to keep as near the Voice of Supreme intelligence as possible. Nowhere do we have that Voice in its simplicity more satisfactory than in the Book where God has in these last days spoken to man. That God was manifest in the flesh in his Son Jesus Christ is evident from the Scriptures. He took upon himself humanity like unto man, had a mind as we have, and that mind was the embodiment of the Father's will, and the will of God in him was the exercise of the mind of God in the sense of true knowledge of divinity; so positive in him was indeed the fullness of the Godhead bodily that the Savior could well be denominated God, although he was after the likeness of man.

Man, being created in the image and likeness of Deity, was given a divine pedigree; therefore divinity of mind is inherent in him, and we are just in saying of the supreme gifts of God that characterized the make-up of man, They are divine. Faith produced because of having divine truth and accepting it with an "ear to hear" brings about a divine will in man and enables him to become a son of God in the sense of the brotherhood of Christ, he being our Elder Brother, the first begotten of God under the new dispensation, or

covenant, that characterizes the Christian law as the "perfect law of liberty."

All these divine forces, the outcome of the divine mind of man enables him to have the spirit of Christ, the mind of Christ, the power of Christ so far as he is the offspring of God. This being the case, we can understand how it is possible to do the like supernatural works Christ did or even greater under conditions of like nature and under greater opportunities than may possibly occur in God's providence as the church progresses in the world Christ came to save. One thing we note with special emphasis: Christ by no means limited God's special means of grace to the few years of his work here in this world. We by no means detract from the power of Christ's work in his ministry here or his continued ministry by the aid of the Holy Spirit and those to whom he gave his great commission, but it is altogether right we should rise to a higher degree of spirituality and a higher supernatural understanding of what man is and what his mission is here as a collaborer with God. Man should know God created him to have "dominion" over the works of his hands and that the earth is man's inheritance. Now that the "last man, Adam," has become the "Conqueror," the "divinity of mind" is one of the grandest themes for man to study in this century.

Pasadena, Cal.

RURAL AND CITY PUPILS.

MAUD HAWKINS.

It is an erroneous idea that the children in a town taken as a *whole* are better educated than those in the country. True, there are some favored ones who reach a higher standard than any child in the country. But while there are the few, there are hundreds who fall far below the average country student.

There is a general idea that the country child does not have the literary advantage that is to be had in towns; that they have no access to libraries, magazines or newspapers, but as a fact there are few country homes that are not supplied with the weekly and daily papers and one or more magazines, and often the children themselves are subscribers to some good child's paper. For example the *Youth's Companion* is found in many country homes; and every home has a collection averaging from a very few books to a fair-sized library. And these papers and books are more thoroughly read by the country boys and girls than the superabundance found in some city homes, which can be only superficially read on account of the many outside attractions that always manifest themselves to the boys and girls in a city.

With the free rural delivery, rural telephones and their usually good conveyances, country children have an opportunity to keep abreast with the times equal if not superior to the town-bred children.

Admitting that there are some who are not up with the times, who do not even take a county paper or own a book, are there none of like habits in the towns? Are there not many who go from shop or factory every day who seldom glance at a newspaper or magazine and never read a book unless it be some sensational, trashy novel? Granted the professional men, the business men, merchants and bankers do a good deal of reading, where were the majority of these men educated? Did they not come from the farm? How many of the shining lights of a town are town-born and bred? Three-fourths are from the country.

It is necessary that country children go to the cities to finish their well founded education, as there are no schools in the rural districts wherein the higher branches are taught, but taking the whole population of each, it will be found that on an average the country people are the better read.

The argument is that the town child has access to libraries. Do they all have *free* use of the public libraries, or is it just the few who are able to show a card of recommendation?

Are there not thousands who would not read the books if they *were* allowed free access to all libraries?

How many of the town boys stay in school beyond the eighth grade? A very few of the working class. When the educated people of a town are spoken of, only a few are referred to, not the masses as in the country. It does not take in the slums, alleys and block residents.

Every town school has a library. Are the books read to any great extent and by whom? If there is a library in a rural school, the books are usually read by all, parents as well as children.

Towanda, Pa.

VALUES REAL AND FALSE.

A CHILD and his father were building playhouses together on the sand, says a writer in the *Wellspring*. By and by the tide came in and washed them all away. The little fellow was nearly in tears because the work of his hands had perished so soon. But the father consoled him, and carried him away to the house. The father himself was not troubled. He knew when they built their houses together they would not stand. He knew that both of them had gotten health by building them, for the salt air and the sunshine was what he sought on the beach. And besides, the father was interested in bigger things.

Half our worrying would cease if we were more like that father as concerns the small tasks that fill most of our days. It is worth a good deal to a man's peace of mind, whatever he is doing, to realize in a right spirit that "here have we no continuing city." It was an old Persian king, was it not, who bade his servant to remind him ever and anon, "Remember, sire, this, too, shall pass away."—*Exchange*.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER.

Chapter LXXXI. Homeward Bound.

FROM the railway station in Calcutta a "boy," who was a fullgrown man acting as porter, carried my baggage, on his head, as he trotted along by my side as I rode my wheel to my hotel,—the Grand. In the picture you can see this "boy," walking behind the native who leads a litter of puppies along the street. The Grand Hotel faces an extensive park or pasture field in which herds of cows may be seen quietly grazing. It is the swellest hotel in the city. In fact Calcutta has but few reliable hostleries, and when a tourist of dignity and self-respect and money happens along, he invariably selects the Grand. It was operated by a lady whom I had the pleasure of meeting, who also managed the hotel in Darjeeling. The waiters here slept in the hallways and sometimes when finding my way to my rooms in the dark I tramped upon them, or fell over them. They were quick at meal serving,—for Hindus,—and the meals were of the very best grade. I shall never forget my days spent at the Grand, in the big city of Calcutta. A large room with two beds in it was assigned to me. Above these beds was an electric fan with great sweeping arms or paddles to whip the hot blasts of air into sleepable currents of coolness. Part of the night I slept in one bed, and when the matting grew too warm, I climbed into the other bed, stopping one fan, and starting the other one above me.

Calcutta is an attractive place with beautiful parks and splendid museum. Here was a whale with jaws twenty feet long, and a throat big enough to swallow two men at a time, a turtle as big as a small Jersey

cow, a cat as big as a tiger, and a python eighteen feet long.

I found enterprising Americans in business. Smith Brothers, American dentists, occupied extensive quarters in a fine building and were doing a big practice. American dentists are the only dentists who understand their business. Never let any one else "monkey" with your mouth. Smith Brothers were Methodists and showed me the usual courteous greeting, and more, expected of good Methodists.

Easter day found me aboard a little vessel en route to Burma where I talked and prayed from the same pulpit in which Dr. Judson the great Burmese missionary once spoke. A Mr. Darrow,

one of my schoolmates at Shurtleff College, and his wife were living here in Moulmein, with three hundred thousand parishioners to look after. His salary was eight hundred dollars a year, but he told me that he was unable to live, by strict economy, on this sum and that money had to be sent him from his folks. He was doing a grand work.

In a few days another vessel was taking me through the narrow straits around Singapore past the islands of Borneo and Sumatra. One moonlight night I gave a reading aboard, on the upper deck, when the sea was as smooth as glass. Five Chinamen were in this recital, and each of them gave me a free-will offering as I passed my hat after the entertainment. Three of them, sitting in a row, dropped each one dollar into the hat. This one dollar is called a "Mexican" and is about the size and weight of our silver dollar, but is worth just

Grand Hotel, Calcutta, Palatial Home of the Traveler.

one-half as much, when traded for gold. But it was a stupendous sum for a Chinaman to make a foreigner, for I learned that the common offering here by the masses is one-sixteenth of a cent. That one silver dollar given to me by each of these Chinese was equal to from ten to twenty-five dollars likewise dropped into a hat in the United States,—or even fifty dollars, for the wages in China are about five cents a day, skilled labor at that, that feeds itself, besides.

I was beginning to rejoice in full measure now when I saw how much of the round earth had slipped by under my feet and how near I was home. But I had over a month of sailing on the Pacific Ocean yet to make, and then two thousand miles of travel before seeing home. Back at Rangoon the officials detained me for fear I might have the plague, compelling me to report to health quarters every day for ten days. Five thousand people were daily dying in India from the plague, and ninety-eight per cent of the cases were fatal. But the Health Board finally declared that I was sound and well, gave me my passport, and I was now on my way home!

In China I lectured, with a Chinese student for an interpreter, to a mixed audience of Chinese. I wish you could have seen the upturned faces of these men as I talked to them of my own country and its prosperity and good social conditions. These people were deeply interested and several of them talked right out in meetin' at me. One asked: "Which is the worst country?" I did not say it was China, for I was afraid to, neither did I believe that it would have been true if I had said it. For China is waking gloriously. The more I saw of the Chinamen the more I liked them. They are reliable. They have more backbone than any two or three average nations in the world besides Americans, Irishmen and Englishmen.

After visiting the foul prison in Canton where thousands of wretched prisoners dragged the ball and chain with no hope for pardon, I passed through the big gate and from the outside of the great wall built around that city, in China, saw running over the wall hundreds of telephone and telegraph wires, carrying the electric impulse of light and love throughout the Empire of the Dragon. Below them, in rude niches in the wall, sacred tapers, lighted by a heathen faith, flickered out their fading flame. Half were dead. The others

only smoked. Up there, the silent servant of Christian faith, in her triumphant chariot of the electric spark, carried the sweet message of love and liberty to four hundred millions! The two coming countries of the world are India and China, and as China is governed by her own people and not governed by a foreign nation as is India by England, China is the most promising nation on the globe today.

When I left my boat on the Pearl River in Canton I saw walking up and down the wharf there a tall, handsome, Indiana student, over there on his vacation to earn a little money, showing China how to run her Customhouse. On the other side of the river, within sight, Pittsburg locomotives were running around on Carnegie steel rails, and American foreman were work-

ing over Chinese workmen. All China needs is a start, a start for the right God and for the right industrial life. And she will mind her business, too, and climb to the very apex of national success.

I had a day at Penang, in Southern China. The city and people are worthy of a whole letter. The scenery is lovely and oriental in full measure. My wheel took me out into the country over the easy roads and I visit-

ed the great waterfall that held me in delightful meditation for hours.

Dr. Rabe, an American Dentist of great ability and with phenomenal success, lived here in one of the palatial bungalows. To him come the best people of the Straits Settlement for dentist work. I found the Doctor to be a great naturalist as well as dentist. All around him, within a few hours, were islands and forests and jungles full of barbaric peoples that used to cook and eat white tourists. His collection of curios from these tribes is sufficient to fill a building and the institution in America that could get hold of it for their museum would be fortunate indeed. Much of this is now in the museum at San Francisco.

At Hotel America I learned through our Consul that an American boat was about to sail for Manila in the Philippines. In a few days more I was in our island possessions, walking the streets of the Spanish Inquisition so lately putting to the torture the poor people of these islands. At the Hotel Belle Vue, right on the beach, I took my meals and here gave a parlor entertainment one evening to a select audience of guests and

Transport Logan. Thirty Days on the Pacific.

citizens. A position to teach was offered me in the schools, but not feeling well, I was allowed by the quartermaster to take passage on the transport *Logan* for Frisco. I was to have my passage for twenty-five cents a day, including board and lodging. But I was to eat and sleep with the soldiers. After trying this for nine days I decided to spend fifty cents more per day, which I had in my pocket, and go up and get a room and have meals with the officers and their families. In this first-class department everything was good. We had roast goose, baked lamb, fried chicken, ice cream, nuts, candies, cakes and pies—everything the palate could wish,—except plenty of choice vegetables. But I couldn't complain. For I was glad to get even the soldiers' fare. I had a day in Japan which I used as fast as I could—I mean as *slow*. I was too homesick to want to go around much here and after a rickshaw ride into the country where I saw enough to give me a fair idea of Japan for my purposes I boarded the *Logan* at night and when I woke next morning, we were out at sea steaming eastward over the Pacific, discovered by Balboa.

There was just one more stop,—after a thousand miles or so,—before the next stop would be San Francisco. Then, another thousand or so,—how short it seemed now,—and also how long! and I would once more put my feet upon native soil!

One day, when the sea was quite rough, I saw a big shoal of whales coming full speed toward the boat on our starboard or right. There were twenty or more and they formed a perfect line, at an angle of about thirty degrees, the whales nearest the boat being farthest behind, but each one of them at a uniform distance from and behind the other. When they saw us they first dived, then came up again, here and there, having changed their course under water. Several were "spouting" at the same time, and it was the biggest whale scene I ever saw.

At Honolulu, Hawaii,—also our islands,—I had a half day to ride about the city and out into the country, where flowers and round-faced girls grow in the eternal sunshine.

The people were very kind to me here, receiving me as their guest. The million dollar hotel gave me the run of the place.

Just a backward look: Manila. The social morals there are bad. Many of the soldiers riot in uncleanness, and I was told that many occupying hospital beds ashore were returning home with blood diseases. On board the soldiers might have had worse treatment but it should have been better. The food was mixed up and served them like slop. One day one of the girls of an officer said to a friend, "Come, let us look at the *hogs* eat," meaning the soldiers. The officers get their salary while traveling and also four cents a mile. It is seven thousand miles across the Pacific. Why should the officer get so much better treatment than the soldier? I have praise for our rulership in Manila, such as I saw it, and probably a fuller study of its moral and equity values to-day would reveal satisfactory progress. The tendency, however, is for graft, and ill treatment of those who do the dirty work by those in high rank above them.

America! Landing at Frisco. Golden Gate. Sunset, Disembarked Next Morning. Everybody Wants to Get Off.

Of course I was glad to step onto the United States again after three years' absence. But as I went up the street I was disappointed at the strenuous, hard-drawn faces of men and women. Everybody was hurrying. Young women were wrinkled and sad-faced, and the sight gave me a shock.

After preaching in three Baptist churches in San Francisco I picked up apricots for a man near San Jose, and not yet able to ride my wheel because of the lumbago, took a Pullman home, arriving at twilight and meeting mother in the yard of our home in Polo. Her trembling hand rested upon my shoulder as I went into the west door of the house, just as three years before I had gone from the *east* door, and had kept on going *east* until I had gone around the world and entered our *west* door.

"Trust in the Lord and do good; so shalt thou dwell in the land, and verily thou shalt be fed," was the text that took me.

In farewell, gracious publishers and editor of the INGLENOOK, here's my heart and hand, as your penniless world tourist. God was good to allow me to see so much of his wonderful world, to start me out and to bring me home again. Let me say, not "good bye" but "Au revoir," till I see you again.

All Rights Reserved.

THE deepest joy comes from a life of trust.

HARD WORK.

"It begins to look as if I was doomed to fail, after all my earnest, hard work," said the young man, with the calmness of despair in his voice. The old man to whom he spoke—a kindly, old-time friend—looked into his face critically for a moment before he answered. Then he said slowly, yet with a certain earnest impressiveness that sent the words home to his discouraged listener:

"I was readin' the other day that 'when things begin to look like ye was licked, then it's jest the time we had oughter begin to work the hardest.' Maybe that is the case with you. Suppose you try to and see how it works. And along with the work, just kind of mix in the idea that you are going to make it go—that there isn't any give up about it—that it is just a matter of keeping right along until you win."

The young man thought it over for a few minutes, silently, carefully. Then he threw up his head, and there was a new look in his face and eyes.

"I'll begin to work my hardest, right off," he said, "and—thank you." And from that day he did work hard, and won success out of what had seemed to others as well as himself, certain failure. It had looked, indeed, as if he were "licked," but hard work had won the victory for him in spite of all.

And so it will for others. Things are sure to look dark sometimes for some of us. It may seem almost folly to keep on trying against such great odds—yet, who can tell, unless they try and keep on trying, how near success lies for them, just on the other side of the cloud of apparent failure? Work your hardest then, even if defeat seems near, and see if it will not turn to victory.—*Young People*.

RECREATION

T. H. FERNALD

WE should heartily lay hold of anything of a proper nature that tends to increase happiness, benefit health, and prolong life. This life should be one of happiness, instead of, as in many cases, one of misery and unhappiness. There is at the present time too much struggling for wealth and not enough enjoyment. The child can scarcely walk when it is made to learn the alphabet, and all through youth the child is crowded with learning, regardless of health. It is even so through life. We are ever crowding for wealth—not health.

The majority of people grow old too quickly, which is due largely to their manner of living. The innocent pleasures of life are so replaced with worldly cares that the sunshine is all crowded out.

The body grows old through the mind, so if the mind is kept young the body will remain young. Constant work, worry, and cares of all kinds, have bad effects upon the body, as well as upon the mind, and tend to deaden the capacity for enjoyment, thus robbing life of its happiness. There is nothing that so quickly robs life of its pleasures, and injures the health as constant worry, overwork, business cares, household and family cares, or in fact any of the affairs of life. Therefore, if any man or woman would enjoy the most of this life, there must be a change of surroundings; there must be hours of recreation and repose, when the mind and body must rest from their respective work.

Rest is not necessarily repose in an easy chair or upon a couch, but a change of work. One who uses the brain all day can find rest in exercising those mus-

cles of the body that are not by his work brought into play, and one who uses his muscles all day may find rest by using the mind, in reading, study, conversation, viewing the scenery, etc.

The wife who has the cares of the home, which falls to the lot of every faithful wife and mother, needs rest, and a change of surroundings. Let her go visiting or calling upon a neighbor. The man who has been working all day or had his mind occupied by business cares must have rest, and should leave all the cares of his work or business at the shop, office, or store, and not take them to his home. Recreation is the spice of life, and unless one has the proper amount of this spice, his life soon becomes soured, and he grows old before his time. The place to rest and have recreation is in the home—in the bosom of the family—with the wife and children. Home is just what we make it, and can be the most sacred place on earth, or the most wretched. It is the place in which to find true pleasure, and not at the club or other place of so-called amusements. There is no place where one can find such healthful recreation and enjoyment as in the home, with the faithful, loving wife and happy, loving children.

What can be more enjoyable than the innocent games of the home? Let the father play ball with the boys, and the whole family can engage in lawn tennis or croquet. Such games are very healthful and delightful, and furnish enjoyment for the whole family, and tend to keep the young people at home, and away from bad company and places of a doubtful character. The wife and mother should engage in those games that would be becoming to her sex. Then for the

winter evenings there are the innocent games for the fireside, as well as for outdoor.

We make our lives what they are. If we have a jovial disposition and take time to enjoy life, our health will be better and our lives longer than if we are always working and never have time for rest and recreation. Let us not strive for the perishable riches of this world, but for the riches that money cannot buy or help us keep—perfect health—as well as those that never perish—eternal life. While we live, let us live aright, as to health and as to our spiritual life.

The "smile cure" has been recommended and I think it would prove very beneficial in many cases, and would prevent much of the minor ills of life. If we would smile always—whenever we feel poorly, or discouraged, and even when we feel to frown, this world would be better and happier. Let us ever remember that to a great extent life is what we make it. "Whatsoever a man soweth, that shall he also reap" is not only true in the spiritual but in the physical life. If we sow for sickness, or disregard the laws of health, we shall reap sickness, but if we sow for health, we shall reap health.

Ignorance of the laws of health is no excuse in these days, for one not living for health. There was a time when the doctors had all the knowledge there was in regard to good health, but those days have passed, and with all that is written by eminent authors along these lines, the secret of life, health and happiness may be possessed by all, and it is our duty to possess this secret.

Belfast, Maine. ❁ ❁ ❁

NEIGHBORLINESS.

"IN twenty years—in twenty years I expect we will have pretty near reached kingdom come, eh?"

So said Jacob A. Riis, with a happy smile on his red-and-white Teutonic countenance and an inquiring lift in his voice, as he recently addressed the Arche Club at Lincoln Center on the subject of "My Neighbor."

"Look what has happened already," Mr. Riis went on. "Twenty years ago there wasn't a single settlement in New York City. Now there are more than sixty of them, and the settlement idea is spreading everywhere. No, no, the settlement is not a cure-all. It's just a means of giving us something that in our modern cities we otherwise haven't got at all—neighborliness, in the true sense of the word. In the small villages from which our cities grew there was democracy in social relations. The city has killed that. But it is essential to a full and complete life, and we must revive it. We have wandered from the path, eh? Well, we must just go back.

"Pretty soon we shall have the schools for social centers, to hold lectures and even political meetings in. Each school building will serve its district. In this way we will get back to the town-hall plan of our an-

cestors. They met each other in that little town hall, and learned to know and love each other, and out of that came mutual service and true living. Without some such social center we break up in cliques and clans, narrow circles outside of which our sympathies do not extend. That's is bad—bad!

"All the grasping and the greed comes from not regarding our fellows as our neighbors. One doesn't trample his neighbors, he works with them to a common end. Well, we must come to look on all the world as our neighbors. We must do away with the idea of classes. There isn't any justification for class lines in America. They are unjust, unwholesome, unrighteous and un-American—there, that's all the 'un's,' and they about cover the ground. Why should we have class lines here in this country, and one man despise another just because he has been lucky enough to make a little more money? For my part, I am in favor of prohibiting the inheritance of big fortunes. A man has some right to be proud of what he makes with his own hands and his own brains, but he hasn't any business putting on airs over what he is merely trying to spend.

"We are all workingmen here in America. I have never seen a man that was worth a—a—anything, who didn't work in one way or another. I think that often the man who sits at a desk does harder work than the man who handles a shovel. But, anyway, they both are workingmen. We are all born in the same way, are we not? And we all die—if not in the same way, it all amounts to the same thing in the end. And then for that little space between birth and death, why shouldn't we spend that in helping each other, eh? Why should we separate ourselves with foolish little prides and hates and ridiculous class lines?"

"Where are these ideas spreading the most rapidly? Why, everywhere, among all kinds of people. The working classes? Now, don't say the working 'classes.' What have I been telling you? We have no working classes, just working people. But I think the ideas are spreading most rapidly among people who have had the greatest educational advantages.

"Am I hopeful? My goodness, how can I help being?" And Mr. Riis waved his arms about to express the utter absurdity of pessimism. "Why, ten years ago there wasn't a playground in New York. Now the municipality conducts ninety-nine, and other private institutions run about sixty others. And you, here—why, Chicago has set the pace for the world in the matter of playgrounds.

"And this doesn't simply mean that some children are getting a chance to play. No! it means that we are waking up, we citizens of the United States, to the fact that our greatest wealth does not consist in our mines and our manufacturing establishments, but in our boys and girls, and that we must secure justice to them."—*Chicago Evening Post.*

SAVE VOLUNTEER TREES.

ATTENTION has been called lately to the benefit to be derived from saving the volunteer seedling tree that yearly keeps on springing up and trying to grow on roadsides and in sheltered spots, the fate of which is to be ruthlessly cut down when the summer weed and brier cutting is done. It is of really vital importance that something should be started looking to replacing the trees cut down. The rapid deforesting of the country in the past decade has made this a real necessity. The bitter fruit of poverty of land, of erosion, and of droughts is the harvest before us.

To strike out a furrow, plant tree seeds, transplant the seedlings to a nursery, and make a transplanting to the final growing place, is of course the proper way; but when one remembers that it will take from one to three years of careful cultivating to get this far, and after it is done one must wait twenty years for a result, and that about fifty per cent of these transplanted young trees die, it becomes an undertaking of no mean magnitude to plant and set out trees.

Now while the benefit of a crop of trees so planted is obvious, and plainly to be demonstrated as paying in dollars and cents, the immediate command of money, time, energy, foresight and patience is so overwhelming that for the man of moderate resources it is out of the question. But the man of the most modest means can keep a sharp lookout for a seedling tree growing along his fence or on the roadside, near his brook or stream, and when he swings his scythe for the annual weed cutting, leave it to take its chances, which are fifty to one in its favor, unless it be in a meadow where cattle leave no leaf nor sprout on sapling.

For some seasons past farmers have been sparing locusts and cedars—good for fence posts they tell you. That being an immediate, concrete want, they spare the trees; but the others, valuable as soil protectors and humus-holders, they sacrifice.

The suggestion was made to our Forestry Bureau that they advocate the saving of the natural volunteer tree growth wherever possible, and they found objection and took exception to it on the ground that the growth would be haphazard and irregular. How about the forests of our fathers? Haphazard planted, all of them, yet we find small fault with them now they are gone, and we found great wealth and comfort in them in their humble, haphazard way. Saving the nature-growth of haphazard, windsown trees is good economics, for it makes use of a now useless by-product.

Farmers and country people in some parts of the country are so busy trying to get a bare living out of the poor soil, that they have no time to stop to plant trees; yet they are intelligent enough to know they need them.

The rich western farm in competition is not entirely

to blame for it. The rapid deforesting in a thin, sandy soil is largely responsible. Trees keep in the humus, hold the land from erosion, from floods, from droughts. They are a necessary protection to the soil.

We who read of the famous cedars of Lebanon from which the splendid timbers of the temple to God built by the old Hebrews came, and picture in our mind's eye the high green mountain, like one of our own pine-tipped heights in the Olympics on our Pacific coast, would receive a shock and an education in deforesting if we could see that same Mount Lebanon now—a land that flowed with milk and honey in those days of the tall cedars, is now a bleak, sandy, stony waste that will hardly give comfortable subsistence for a goat. And that will be our fate if we don't save our trees. So, farmers and roadmasters, mind your eye as you clear up your fences—let the small treelet have a chance. It will grow to prosper you.—*Farm Journal*.

**A PRACTICAL ARGUMENT.**

"WHAT brings you here, Mary?" said Truesdell to his wife, as she entered the liquor store.

"It was very lonesome at home, and your business seldom allows you to be there," replied his meek and resolute wife. "To me there is no company like yours, and as you cannot come to me I must come to you. I have a right to share your pleasures as well as your sorrows."

"But to come to such a place as this!" expostulated Tom.

"No place can be improper where my husband is," said poor Mary.

She took up the glass of spirits which the saloon-keeper had just poured out for her husband.

"Surely you are not going to drink!" said Tom in astonishment.

"Why not? You say that you drink to forget sorrow, and surely I have sorrow to forget."

"Woman, woman, you are not going to give that stuff to the children!" cried Tom, as she was passing the glass of liquor to them.

"Why not? Can children have a better example than their father's? Is not what is good for him good for them also? It will put them to sleep and they will forget that they are cold and hungry. Drink, my children, this is fire and bed, and food and clothing. Drink; you see how much good it does your father."

With seeming reluctance, Mary suffered her husband to lead her home, and that night he prayed long and fervently that God would help him break an evil habit and keep a newly-formed but firm resolution.

His reformation was thorough, and Mrs. Truesdell is now one of the happiest of women, and remembers with melancholy pleasure her first and last visit to the dramshop.—*Selected*.

NATURE STUDIES

CLAY, KINDS AND USES.

JOHN H. NOWLAN.

FROM the earliest times man has used the plastic materials on or under the surface of the earth for the purpose of making articles of ornament or utility.

The stone age was followed by the bronze age, which in turn gave way to the age of iron, and now we have the age of steam and electricity. There has been no age of the plastic arts but they have flourished and developed in proportion to the civilization and culture of the people.

The study of clays and clay working is combined with poetry, art, science, history and even religion.

Potters are among the most ancient artisans mentioned in the Bible and many lessons are drawn from their work. (Chron. 4:23; Jer. 18:2.)

Sometimes all we are able to learn of some ancient civilization is through the study of pottery and bricks.

Babylon and the other ancient cities of the old world kept their records on clay tablets. The remains of Mexican pottery and those found in the mounds of the United States are but some of the waymarks on the road of man's industrial development.

The origin of the art is lost in the dim vista of antiquity, but so far as the records of history show, the principle of molding damp clay and hardening it by heat has been unchanged.

Clay is defined as "an earthy deposit found on or below the surface, which when finely ground and mixed with water forms a moldable or plastic mass which can be burned to a hard, stone-like substance after drying."

The original crust of the earth was formed of material crystallized from a molten magma. These igneous rocks through the action of the elements underwent a change, thus forming other classes of rocks.

The student of geology knows that the rocks, even the most enduring, are constantly undergoing changes. Acted upon by the forces of nature, they are continually decaying.

When this decomposed material was deposited where formed, the deposits were called residual, and when carried in suspension by moving waters and dropped in still water they were called sedimentary. The latter are the more important as the difference in the specific gravity of the various materials causes them to be de-

posited in different places. Thus beds of a special kind were formed.

Even after the formation of the deposits great changes have sometimes taken place. Subjected to intense heat and pressure by the folding and crumpling of the earth's crust, they have been metamorphosed into sedimentary rocks and shales. Again subject to decay, acted upon by percolating water, by the means of which many of the crystalline minerals were dissolved, acted upon by acid and alkaline solutions, each deposit is in some particular unique, requiring special treatment to secure the same results.

Clays of the same chemical composition and of apparently the same physical texture will sometimes yield different results in the hands of the selfsame craftsmen. We may illustrate by saying starch and sugar are chemically the same but in the culinary arts one is not a substitute for the other.

The residual deposits as a rule are fit only for the commoner kinds of brick and earthenware. The sedimentary beds have furnished nearly all the finer textured clays.

Beds of fine-grained material have been found one upon the other in such quantities that they have been consolidated into shales. Some of these shales are as hard as rock, but when ground and mixed with water form some of the best materials for pottery.

Some beds of clay are sandy, or to use a technical term, "lean" while others are plastic and "fat."

Ball clay is the name given to very fat plastic clays which when molded and dried retain their shape well, but as they usually will not stand the fire well they are mixed with clays of low binding power but of good firing qualities.

One of the most important properties is plasticity. You know that all wet powders cohere to a greater or less degree. Take wet sand and you can make a ball of it, but try to mold it and it will fall to pieces. From this extreme up to the most plastic of the ball clays we have every variation.

Recently while driving along the road a few miles from here I secured what is known locally as molder's clay and just a few minutes' drive from that place are to be found vast deposits of building sand.

Why is the former *fat* and the latter *lean*? This property is due to another kind of matter defined as

amorphous substance. Only one kind of amorphous matter will produce plasticity. Glass is amorphous, non-crystalline, yet powdered glass is no more plastic than wet sand. The kind that is useful contains water, even when apparently dried. To distinguish it it is called *colloid*, meaning glue-like. If the clay is heated sufficiently to drive off all water all plasticity is gone. The most plastic clays after firing cannot be again reduced to powder and dried. Brick dust is no more plastic than sand.

Another reason for the mixing of several kinds of clay is because of fusibility. Pure crystalline substances when heated become gradually hotter with no change of shape till they reach a certain temperature when they suddenly liquefy. On the other hand a non-crystalline amorphous substance, as for instance glass, gradually softens to the point of flow.

When the particles become soft in the fire this is called incipient fusion. Common bricks are heated only to this point, and retain an open porous structure. If the heat is continued the particles vitrify or fuse together. Paving bricks and many kinds of stoneware are vitrified. In most clays these two points are from one hundred to five hundred degrees apart, hence the potter by controlling his fire may produce the article desired.

If a brickyard or pottery is near you, visit it and see the actual handling of the clay.

CAN SNAKES CHARM?

ONE sultry day in August, sitting at dinner on the large back porch of our plantation house, I noticed a little wren fluttering just above the grass in a corner of the yard near an old log cabin. I thought the bird was trying to catch some insect, or eating the seed from the plantain weed. But as I watched it flew to a peach tree that grew near, and then, resting about a minute, flew to the same spot again and began its queer fluttering. Several times this was repeated, and I became convinced that something attracted the bird to this spot, or it would have alighted elsewhere. On going out I discovered in the grass a large spreading adder, which, seeing me, glided swiftly under the cabin. I looked for the little wren, but it had flown away.

The next day at the same hour, I was surprised to see the bird fluttering in the top of the grass as on the previous day. Waiting until it flew to the tree to rest, I procured a rock and went to kill the snake. But as I reached the spot it again disappeared beneath the cabin; so I threw the stone in the direction of the bird and frightened it away.

On the third day I watched from a window in the cabin for the snake to make its appearance. About noon it came stealthily gliding out and stopped in the grass at almost the exact spot as on the days before. It was not long until the poor little bird came fluttering

from the peach tree, so close to the snake this time that I was sure it would get it. Several times it leaped out of the grass, but the wren took refuge in the tree. Although this day it seemed weary and chirped pitifully, its stays on the limb became shorter and shorter and the periods with the snake longer.

I determined that the adder should not escape me this time; so, taking a garden tool, I went down and threw a stone to frighten the bird, which went again to the tree. The snake quickly started for the cabin, but finding an enemy confronting it, began to flatten out at the head, which threatens danger. After a little battle I killed it, while the poor bird looked on gratefully, perhaps, from the tree.

It has been said that snakes cannot charm. But what was it that brought the wren to that same spot every day? Did it remember the previous day's experience with pleasure? Surely not! It simply could not stay away; so it came back to the charming reptile, who seeks but to destroy.—*Josephine S. Ardell, in Sunday School Advocate.*

A PERSEVERING MOUSE.

INSTEAD of rushing wildly about and wasting force when in a dilemma, remember this little story told in the *Boys' World*, and profit by the example of deliberate, intelligent perseverance displayed by the apparently helpless, hopeless little victim.

During the digging of holes for telegraph poles in New York not long ago, the workmen noticed a mouse which had fallen into one of the cavities. For hours the tiny prisoner raced frantically around the enclosure. Then he seemed to get over his hysterics and set his wits to work. Soon he began systematically to dig a spiral groove, round and round the inner surface of the hole, which was several feet deep.

Night and day the busy little captive worked away, digging little pockets here and there as his improvised staircase got further from the ground, so that he might rest from his hard labors. The workmen kept him supplied with food, and, after the third day, the indefatigable little creature reached the top, and enthusiastic cheering welcomed his freedom.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

ONE of the most effective means of stilling the voice of criticism or fault-finding is to get the critic to bear a hand at the work. Inside knowledge is the most thorough and illuminating kind and the only way to secure it is at first hand,—by taking an active part in the work.

KEEP today's strength and courage for today's duties. A very powerful influence that many times brings us failures where we might have had successes is this habit of spending the strength that is needed for present duties in thinking of and planning for those yet in the future. "As thy days, so shall thy strength be." Let us keep our strength for the duties that now await us, and then we may claim the promise of strength for the duties that may make their demands after awhile.

"AROUND THE WORLD."

THE travel series of articles, "Around the World Without a Cent," which has been running in the INGLENOOK for more than a year, closes with this issue. The author has given us a lively description of his travels and experiences and his articles have been eagerly read by a large majority of our readers. Even in so long a series it has been necessary to omit many interesting things, but as a rule the author has hit upon the things of particular interest and that give the series a place of its own among travel articles.

While Mr. Spickler has entertained his readers, he has also given them much information, and the lessons in practical, wholesome living which he has drawn from his experiences and observations and has handed over to us, have given us new determination to rule out many of the inconsistencies in our own lives which make us stumbling-blocks and objects of reproach to a Christian nation.

These articles have also brought to us a deeper

sense of the brotherhood of man and of the responsibilities which such relationship bears. All the ignorance and superstition and curious customs described cannot blind us to the part that is ours in giving help wherever help is needed. Far from turning aside with a feeling of self-complacency and superiority, we should consider all needy ones as a rebuke to our faithlessness and indifference and endeavor to make amends as quickly as possible.

A BIT ABOUT WINTER.

AT this season, when as yet we have had no real winter weather, and only a hint of its nature, we are the most averse to the winter season. In other words, winter in prospect, with that prospect guaranteed by the presence of Jack Frost, is dreaded a great deal more than when we are actually experiencing its countless thrills. There is a reason for this, maybe several of them, but we cannot discuss them now.

This is the time, when the dread of cold is itself giving us cold shivers, that we eagerly read long descriptions of tropic and semi-tropic lands where the balmy breeze blows perpetually, carrying the fragrance of ever-blooming flowers, etc., etc. And often the reader is moved to action by the description and with luggage in hand swiftly retreats before the threatened winter blast. It is well, perhaps, for invalids and the aged that there is a safe retreat from the rigors of our northern winters, but one does not always feel thus when he sees strong men in the vigor of manhood and women in the prime of usefulness lay down their tasks for a few months to escape the unpleasantness of winter by basking in a more genial climate. While it is true that the work of the world goes on despite the action of these shirkers, their part of it suffers more or less and they themselves suffer most of all. A choice of the easier road in the face of known duties—work that needs to be done and that fills out the full measure of a man or woman—is always done at a loss to the one who so chooses.

Fortunately this first dread of winter soon passes, if one has the courage to face it boldly. Almost before one is aware of it he finds himself interested in the many attractions winter possesses and viewing them and the season in general in the most optimistic spirit. He now sees winter as a blessing, for it is such to many thousands of people. The greater part of the world's work is done by the people who annually have the cobwebs blown from their brains by the energizing north wind, and their whole physical man renewed and purified by the beneficent work of frost and snow. In the great forces that are concerned with the progress and development of mankind winter holds an important place.

TENDENCIES IN MODERN EDUCATION.

It is not strange that high school young men should have organized secret societies. It is strange that any thoughtful person should not have foreseen the movement long before it originated. All men are imitative beings and this is particularly true of those who are young. With college men following the example set by older ones and setting up their fraternities, it was inevitable that the younger men in the high schools who were copying the college boys in everything else should follow them in this also. Secret societies have found their way into a vast number of high schools and into most of the graded schools as well.

The results in the lower schools are like those in the higher and in the outer world. Dr. Crosby, of New York University, long since said, "Out of the darkness dark deeds grow." It is apparent from the nature of the case that this must be so, and all history confirms what the common sense of mankind would prophesy. These evil results are many; only a few of them need be mentioned.

The lodge rooms and chapter houses, at the very best, become loafing places where boys idle away time, smoking, chewing, telling unclean stories, reading degrading books. Card playing naturally leads to gambling; dances ruin good women and bad women are introduced to ruin boys and men who have lived clean lives hitherto.

Along with this moral wreck come bragging and boasting of the lodge and its members. All the best men in the school are said to be connected with the secret order which happens to be in view. The offices which have been stolen or begged for the fraternity men are named as proofs of the superiority of these same persons. Those who will not join the lodges or who are not invited to do so are insulted, ostracised and in every little mean way possible put at a disadvantage.

This state of things, so far as it has taken possession of the high schools, has caused a movement against these boy and girl lodges which extends from ocean to ocean and from the Great Lakes to the Gulf. Principals of high schools and superintendents of city systems who are themselves members of lodges unite in denouncing the school fraternities as centers of all sorts of evil. It is safe to say that if the presidents and professors of our colleges had been as faithful to their trust as the high school men have been to theirs, there would be no school lodges in existence at this time. As it is, however, the people of the entire country seem determined to save the public schools from the pest. Almost without exception the school boards, legislatures and courts which have been called to pass upon this question have decided that secret societies are out of place in the schools. This is a hopeful sign. It shows that there is hope for the future. If these "rat-

hole societies," as President Gulliver used to call them, should ever obtain possession of our schools, they would make them a menace to the moral life of the nation.

There have always been materialists. Probably there always will be such persons. But in the old time it was understood that the colleges, at least, stood for an education which had something higher in view than money and dirt. It was out of the colleges we got men and women who were willing to devote their lives to occupations which offered no rewards of earthly sort for the most difficult labors that men could perform. The last few decades have witnessed a loss in this respect. The rapid increase in national wealth has seemed to dull the lofty ambitions which used to stir the hearts of men. As in the days of old, the sight of luxury and material splendor has canceled the noble zeal which gave us the Golden Ages of great nations. We have no Washingtons nor Lincolns now. We have plenty of politicians who will deliver orations on them. More offices, larger salaries, heavier guns, bigger ships, these are the cries which are continually dinned into our ears. During the last ten years we have spent a billion and a half on our navy and yet it does not please the men who live on the taxes we pay. Meanwhile we have thirteen million families which live on about five hundred dollars a year and who are always on the verge of want. Taxes are to be increased, men and women are to suffer. What are our schools doing to check the mad rush after money and "things"? Not so much as we could wish, yet *something*, we trust. Wendell Phillips used to charge college men as a class with cowardice. That there was truth in his accusation no one can doubt when he has read even a little history. We ought, however, to be just, and while there is much to regret in the attitude of school men, still Phillips himself was a refutation of his charge.

One of the most hopeful signs of the times educationally is the distrust of the free elective movement of a few years back. It is, of course, true that that craze was productive of good. God has so ordered things in this world that the ill wind must blow somewhere and do good to somebody. But the idea of putting the average young man of sixteen to eighteen to determining his educational career is now admitted even by its former advocates to have been a blunder.

A writer in *The Nation* recently said, "Our colleges, therefore, contain too large a proportion of spoiled, lazy boys whose hours of labor have been cut down to an irreducible minimum. Their fathers wish them to be gentlemen—that is, possessed of superficial graces of manner, but agreeably destitute of ideas." He continues, "We could, were this the place, print a list of the very men who at Harvard, Yale and elsewhere run the big elective courses, crowded with loafers from the

(Continued on Page 1103.)

THE HOME WORLD

A PHASE OF THE IDEAL LIFE

HATTIE PRESTON RIDER

I HAVE just returned from a visit to the living incarnation of one of my own pet theories put to practice, and as near as may be, with entirely satisfactory results. Could one imagine anything more gratifying?

Not only that, but the theory was developed along lines and under conditions totally different from those amid which I had worked it out for my own special benefit, for my friend is called a society woman, and, though I love people, I have no taste for clubs or parties. So, we must acknowledge, the test was a worthy one. As to the theory itself, here it is: *That the very finest and holiest life-work a woman can assume, is the helping of those among whom her lot is cast to develop harmoniously the best that lies within them.*

By this, I do not mean that she should make of herself a family dictator or neighborhood critic. Probably we have all seen the type of woman who goes about in slipshod attire to exhort her acquaintances to repentance and then, when through neglect her own children go astray, bewails them as "lost." Such a one only succeeds in disgusting those she seeks to convert, and saves herself from scorn only by the Bible she carries. On the other hand, we must not underrate the woman who is specially gifted to carry on a broader mission to the world. If she has no immediate family ties that would suffer by the prosecution of her public work, then we may consider her as living out this principle still, since her "lot" is that world of needy humanity itself.

The friend of whom I have spoken, however, works, —and, be it observed, unconsciously,—by methods that are within the reach of all womankind. She is not in any sense a striking character, and unless one looks beneath the surface of life to its deeper meaning, he would not realize there were any workings at all. She is simply a kind, pleasant little body, with whom one may spend a social hour very happily. But, stopping to analyze that hour, it has some excellent points. In

the first place, there is no "bad taste left in the mouth" by a budget of scandal or uncharitable comments on this or that absentee. She has not helped you freshen up your troubles by a warm discussion of them, but she has shown the liveliest interest in everything that makes for your own happiness or that of those who are dear to you. She has not filled your mind with poison-breathing images of disease by a discussion of any one's ailments, either physical or spiritual. If she has spoken of her own friends, it is in a sweet and loving way, never with criticism or disrespect. Neither has she bored you with a catalogue of their perfections, by contrast implying shortcomings of yours. She is intelligent rather than clever or brilliant, and all her conversation is clean and pure, because her heart and mind are so. If she holds herself above the uncultured and vulgar, likewise she has no part or sympathy with that even more objectionable class, the so-called "high" society whose loose morals and reckless extravagance are a blot on modern civilization.

It is in her own home, however, that she demonstrates this theory best of all. In managing her work, she shows good sense that amounts to positive genius. During her girlhood she was an invalid, but by carefully planning to conserve her strength, and making every effort count for the utmost, she has grown into fairly good health and yet been able to accomplish almost perfect housekeeping. At her dishwashing she uses a thick mat to stand upon, saving much weariness in back and limbs. A high stool such as is used in offices furnishes a comfortable seat when ironing, peeling potatoes, etc. Instead of carrying a heavy pail of water, she makes two trips with the half-filled pail. She does not keep doggedly at a task till she is too tired to drag herself about, but often sits or lies down in the very midst of it, for a little while, presently going back freshened to finish it, thereby in the end accomplishing as much or even more in the same time. So she saves nerves, doctors' bills, and her husband's pa-

tience; for the burden of a fretful, sickly wife never yet brought out the best in any man's nature.

She has no children, which is the sorrow of her life; but the home is always warm and bright for her husband. Her cooking is planned equally with a view to wholesomeness and his individual taste. She is always interested in that which interests him, sympathetic with the ups and downs of his business life, her pride in his successes an incentive to fresh effort, her encouragement in reverses taking the substantial form of less expenditure about the house or upon herself.

Her four brothers who live in the same city are her familiar chums, proud of her pride in them, in their honesty, diligence, and good business standing. She is her only sister's dearest friend, the comfort of her aged father's declining years, and a generous, helpful member of the church of her own choosing. She delights in her dainty belongings and her pretty home, because all beauty appeals to her; and the intimate friends she gathers about her in little clubs and parties are like herself: clean, pure-minded, wholesome. Beholding as in a glass the image of her refined, cultured ideal, which is the best she has conceived, she grows and helps them to grow into its likeness; and who shall deny that such is "from glory to glory"?

It is not a very striking life, or one that would appear to make much of a mark on the ages as they roll away. Yet, when one comes to think more deeply about it, picturing the hundreds of thousands of home-keepers who like her live their quiet lives of purity and sunshine and sweetness, what a mighty cleansing of the atmosphere of eternity must be the result! The daily practice of the small courtesies of life, the resolute, persistent turning from coarseness and vulgarity, are not unimportant factors in the uplifting of mankind. They count in the family, the neighborhood, the social life, be it wide or narrow. No one can truly grow into the Christ-life without them, for Christ himself was the soul of domestic courtesy, of public and private refinement. Devoting his life entirely to others, he took time and opportunity to recuperate his physical and moral forces, in order that they should reap its fullest benefit. We speak of him as a martyr, yet he never put himself or others in a position to suffer unnecessarily. Wide and far-reaching as was his lifework, it was accomplished exactly as the most retiring and unobtrusive, as well as the most able and ambitious of us must accomplish ours; the ideal life for the true lover of humanity at home or abroad: *He helped those among whom his lot was cast to develop harmoniously the best that lay within them.*

ANTIDOTE FOR ANXIETY AND WORRY.

THERE is one kind of trouble in the world which God never sends, and which never brings a blessing with it. It is the borrowed trouble which people get by worry-

ing about tomorrow instead of being content to bear the burden of today. Most of the worry in this world is over trouble that never comes; and what is more foolish than to brood over troubles in anticipation of their coming? More people are killed by worry than by work. "Preventive medicine," is the great aim of true physicians today, and I present this divine philosophy of life as a safeguard against that neurotic degeneracy which threatens many today.—*Selected.*

A COVETED GRIEF.

Throughout the city streets where children played,

Stealthy and silent, pestilence had crept;

In homes where baby-laughter lately rang,

Vain-listening mothers wept.

I was not of them. Nay, .

Upon my door there hung no baby-blooms;

No music, heavenly-sweet, had died within

My fair, well-ordered rooms.

And yet!—O, blessed mothers,

Let your tears be sweet!

Sweet with the memory of holy joys

God deemed for me unmeet.

"I, from the waste lands of the fruitless years,

Entreat a pity I may not bestow;

For envy stifles pity in my breast,—

Envy, whose bitterness the barren know.

"I watch you pass, bearing your fragrant flowers,

To lay upon a low and sacred shrine;

While I,—I may not throw my empty arms

Across one little grave and call it mine!"

Thus cried my heart. Tonight, despite the years,

The same cry echoes to the wind that whirls

Around the mirthless house, wherein I wear

The crown of womanhood, without its pearls.

—American Motherhood.

TABLE HABITS.

EATING is a very important factor in the life of every growing plant and animal. Growth depends upon it and God has made it a pleasurable thing, because it is so necessary to life. It is not to be wondered at that most children are little epicures; but if they show greediness, daintiness or gluttony, it is a proof of bad bringing up. Plenty of plain nutritious food should be given children, and then they should be taught to "eat what is set before them, asking no questions." The less children or grown people think about what they eat, the better. It is bad hygiene, as well as bad taste, to talk about the food at the table.

We have know families where a great part of the table talk was about the food—praising it, or apologizing. This should never be allowed. Mealtimes are the only times when the whole family are together; and they should find something better and pleasanter to talk about than their food; if they cannot, they impress the children with the feeling that eating is the best part of life, whereas it is only a means to a higher end. "The life is more than meat."

Finding fault with food should never be allowed. If indulged in, it will soon grow into a habit; how disagreeable this habit is, is too often demonstrated in the father's faultfinding at table, by which the peace of many families is destroyed. That it is nothing but a habit is proved by the fact that often the very men who thus make their homes miserable, are heard, away from home, boasting of their wives' cooking.

As to the quantity a child should eat, Nature is a safe guide if the quality of the food is right, and the child is not allowed to eat too fast, as he is often inclined to do if his play is then more attractive than the table talk. As before remarked, the food should be simple, nutritious, such as will nourish the body without pampering the appetite. Of such food the child will eat what Nature requires, and stop when he has enough. If, instead of eating such food, he is brought up on dainties, he will be apt to have a disordered stomach and capricious appetite. Stimulating foods and drinks are never good for children who need nourishing, not stimulating.

The child's table manners should receive early attention. For lack of this, many tables are anything else than the circles they ought to be. We have all seen a whole tableful annoyed by an untrained little child. His victuals do not suit him, and he whines or storms; or he musses with his food, spills his milk, and in other ways destroys the appetites of those around. On the other hand, he may be good natured and eat properly, and yet by his constant talking usurp the entire time and prevent any connected conversation. These offences usually arise from neglect of the principle before stated. Too much prominence has been given to eating and to the character of food. The child has been pampered till his taste has been vitiated, and he has never been trained to eat what is set before him "asking no questions." Probably he has been given too great a variety of food.

Nothing is worse for a child physically and morally, than to allow him to form the habit of fretting and fuming at the table. It is sure proof that his training has been neglected in many important particulars. He has been allowed to think himself the most important personage in the family, to feel that his whims must be attended to, no matter how much they may interfere with the comfort of others; in short, he has not been taught the golden rule. Most examples of bad table manners, as well as of bad manners in general, can be traced to this cause, "for manners are lesser morals." Ingrained regard for the comfort and pleasure of others would banish all bad manners from society. Take, for example, those things in the table manners of a child which seem farthest removed from connection with morals; gobbling down his food, "pig fashion," as it is sometimes described, not only impairs his digestion, but annoys those at the table with him.

Mussing in his food, as children sometimes do, destroys the appetites of those near him, and so on through the list. All these things start in small beginnings, and grow upon the child. At the first they are easily checked, but if allowed to go on unreprieved, soon harden into life-long habits. To allow them to become habits is cruelty to the child. There are men now—grand men—high in the councils of the state and nation, who daily suffer from the tyranny of such habits fixed in childhood. Train the children to behave properly at table, when they first come to the table, and such habits will never be formed. And this does not require continued harping; indeed, this aggravates the evil.

The principles of good behavior here, as elsewhere, are few and simple. Impress them on the child's mind not simply by telling, but by *doing* till right doing becomes habitual. Train children to behave at every meal just as you wish them to behave when you have company or take them visiting. Do not neglect their training when you are alone and expect them to behave well when you have company. Nothing betrays good training, or the neglect of it, more certainly than a child's table manners.—*Childhood, Its Care and Culture*.

THE SICK ROOM.

To Strengthen the Ankles.—For weak ankles practice walking on the balls of the feet on a straight line with the feet pointed directly in front of you.

Sunshine is a Germicide.—Sunshine is a killer of germs and a powerful disinfectant. As much as possible should be let into all the rooms; a little fading of carpets and curtains will result, but the doctor's bills will decrease.

Hot Flannels.—When in need of hot flannels in case of sickness, when there is no hot water ready, wring out flannel in cold water, fold, and place in a paper bag, pinning it together, then put on top of the stove with a cover under it lest the stove burn the paper. The water will soon turn to steam and a hot cloth will be the result without the drip of water. This placed in a warm, dry flannel will prove a great comfort.

Nutritive Value of Cream.—Very few housemothers fully realize the nutritive value of cream, or understand its superiority to any other solid fats, in permitting the gastric juices to mix with it in the most perfect manner, and in this way aiding and hastening digestion. It is invaluable in the case of invalids, for it serves as nutriment in a very valuable form. It is superior to butter, because it contains more volatile oil than butter made from it. It is frequently ordered by physicians for persons consumptively inclined, for those with feeble digestions, for aged persons, and for those who suffer from impaired circulation, cold feet, and those who feel chilly from want of nutriment. No other article of food gives such satisfactory results.

THE SALT RUB.

VARIOUS sanitariums and private sanitariums and private hospitals are using the "salt rub," and it is becoming so popular that some Turkish bath establishments are advertising it as a special attraction. It is just as good for well people as for sick people, is the most refreshing of all baths and rubs ever invented, excepting only a dip in the sea, and is matchless in its effects upon the skin and complexion. With all these virtues, it is the simplest and most easily managed of all similar measures, and can be taken at home—any one in ordinary health can do it very satisfactorily. Put a few pounds of coarse salt—the coarser the better, and sea salt is preferable if it can be obtained—in an earthen jar and pour enough water on it to dissolve the salt. Some physicians recommend that the salt be only well moistened; this should then be taken up in handfuls and rubbed briskly over the entire person. This being done, the next thing is to take a thorough douching with clear cool water, and then rub briskly with a warm dry towel. The effect of elation, freshness and renewed life is immediately felt, and the satiny texture of the skin with increased brightness and clearness of the complexion swells the testimony in favor of the salt rub. In case of weakness, and debility a second person should do most of the work, but the patient should do as much of it is possible without greatly fatiguing the muscles.

Another method is to take a medium sized Turkish towel—generally sold for ten cents, and dip it into very strong brine, hang on the line without wringing and let dry. At night, on removing the clothes, take this salted towel and rub the body all over, thoroughly, with it. A glow and feeling of warmth follows, and if regularly persevered in, it will quickly build up the system, giving improved health. It costs little to try it. The effects are assured. The same towel may be used two or three times, then washed and salted again.—*The Commoner*.

**PARSLEY FOR WINTER.**

BEFORE snowfall, it is a good idea to lift young parsley plants for the kitchen window; but the plants must be youthful, since the older ones do not take so kindly to transplanting. In picking the leaves for use during the winter, it is best to take only the outer ones, leaving the center of each plant intact. By picking in this way, a small box of plants, set on brackets inside the kitchen window, will furnish sprigs of parsley all winter long.

If there are no available plants in the garden, seed may be sown directly in the box at any season, if bottom heat be given to start the seed, which otherwise is rather slow in sprouting. In any case, the box should be left out doors until time for frost. Of course, in the South there is no need for a parsley box, but at the North, where the plants are buried under the snow, such a box is helpful for winter use.—*Suburban Life*.

The Children's Corner

WHY FOLKS HAVE GOOD THINGS.

THERE were nine of them, and they all were dressed in their best, and arranged to "have their pictures taken in a group," Claire said. Beautiful waxen Aurelia sat in the center and held the newest and tiniest doll of all, and the others were placed round her chair. It was great fun getting them ready, but Claire soon tired of them after that. She had so many pleasant things to do, and so many kind friends to help her do them, that she didn't care for anything very long, so when Charlie asked her to go for a ride, the dolls were left to themselves.

"Oh, aren't they be-yew-ti-ful!" said a hushed little voice outside the wide, low window, and a small girl in a faded calico dress tiptoed across the soft grass for a nearer look. It scarcely seemed possible that so many treasures could belong to one child, and yet Molly knew that the pretty room into which she was gazing was not a store. She quite forgot where she was, or how long she was staying, in her delight, until she heard Claire's voice right behind her.

"What are you doing, little girl?"

Molly started, and her cheeks grew red, but Claire seemed even younger than herself, and the round face was so sweet and kind that it was easy to explain.

"It's the dolls—I've been looking and looking and looking. My, but they're pretty!"

"Yes, they're mine," said Claire.

"All of them!" Molly's voice was full of wonder. "I shouldn't think you could hardly stand being so glad."

"Haven't you any?" asked Claire.

"Not any at all, only two made out of corncobs. My little sister and I made them ourselves."

Claire looked at her in astonishment. Not a single doll! Then a bright thought came.

"Why, I know what you must do," she said. "When folks don't have any children of their own they can 'dopt some. I know, 'cause my mother told me about a lady who did. You come right in and I'll see if you can't 'dopt two of mine—one for you, and one for your sister. I 'most know you can, 'cause mother said yesterday nine dolls were too many to have round."

Half an hour later a little girl with a doll hugged tightly in each arm was hurrying home to a tiny house down the street, and the heart under the faded calico dress was so full of happiness that it seemed as if it could not hold any more.

Claire watched her from the window.

"I guess when folks have so many good things, it must be so that they can let others 'dopt some of them," said Claire. "I never thought about it before, but I mean to remember it."—*Sunbeam*.

THE QUIET HOUR

ASLEEP IN CHURCH.

BY IRA P. DEAN.

In the church down on the corner there's a meeting go-
ing on;

Where they're trying to stir the interest of the souls, both
weak and strong.

"'Tis a weary task," the preacher says, "to preach to
these poor sheep,

For when I look upon my flock, I find them half asleep.

"I open up the Word of God and then I try to preach,
Hoping that the blessed text some saddened soul will
reach.

Then turning to the deacon who sits on a front seat;
I call on him to lead in prayer, but find him sound asleep.

"From verse 32 of Mark 14, a text so dear to me,
I preached how Jesus went to pray in dark Gethsemane.
But like the three disciples whom Christ told watch to
keep,

I look upon my little flock and some—are still—asleep.

"There was a certain brother who used to sleep and
snore,

And only waked when some one made a noise back near
the door.

One night a soul came out for Christ, my heart was made
to leap,

But this brother missed the blessing, because he was
asleep.

"Sometimes while I am preaching, the thought occurs to
me,

If in heaven saints do ever sleep beside the Crystal Sea,
And when at judgment Christ will sort the goats out
from the sheep,

If he will place upon the left all those who fell asleep.

"I pray the Holy Ghost to come upon my little flock,
So that for one to sleep in church will be an awful shock,
The Holy Ghost to lead them, for he has power to keep,
And that they'll all be busy and not have time to sleep."

OUR GLORY.

PAUL MOHLER.

In what do you glory, my brother? You do not
"glory"? You are a modest man? Well, in what
then do you "take satisfaction"? I know there is
something, unless you are a very, very extraordinary
man, in which you take some pride; something that
you can do pretty well, something that you have that
is pretty good, or some unusual strength along certain
lines that is peculiar to you. Well, isn't that all right?
Who says we shall not glory in the right things rightly?

But what are the right things? That is the question.

Our choice of the things in which we will glory de-
cides what our lives shall be. If I decide that it shall
be my glory to be a great scholar, a scholar I will be;
if a soldier, a soldier I will be; if a rich man, a rich
man I will be at whatever cost of other things. What
a list we could make of the things in which men glory.

Some glory in the amount they can eat, some in
what they can drink. With some, mountain climbing
is glory, with others, star-gazing. Right now, two
men are glorying in the fact that they succeeded by
great effort in finding the exact spot in the middle of
a boundless sea of ice, which should be the location of
the north pole, if "pole" there were. Another man
just passed over, whose glory it was to control more
lines of railroad than any other man. Where is his
glory now? All the railroads in the world cannot
carry him back to this life.

All such glorying is vain. God knows how vain it is.
How can he, with all wisdom, bear with the poor little
man who thinks he is wise, or strong, or rich? When
the greatest of men is so finite and small in a universe
so infinitely great, what an absurdity for him to glory
in anything he can achieve.

Shall we not then glory? Have we nothing of which
to boast? Yes, truly we have. Jehovah saith, "Let
not the wise man glory in his wisdom, neither let the
mighty man glory in his might, let not the rich man
glory in his riches; but let him that glorieth, glory in
this, that he hath understanding, and knoweth me, that
I am Jehovah who exerciseth loving kindness, justice
and righteousness, in the earth; for in these things I
delight." (Jer. 9: 23, 24.) Paul says, "He that glori-
eth, let him glory in the Lord." Now what do you
say? What can I say? Hath not God spoken?

But just think for a moment what it means. To have
understanding and to know Jehovah; to be even on
speaking terms with him. Jehovah, the All-wise, the
All-powerful; who is above all, and in and through us
all. What a wonderful thing that is, just to know him
as a friend.

But to know Jehovah is more than that; for Jehovah
blesses all who know him. Having all power, he makes
them powerful; having all wisdom, he makes them
wise; having all treasure, he provides unlimited riches
for those who love him, giving all that we need in this
life and guarding the great wealth of our inheritance
till we shall have "reached our majority." Now that

is glory for us, to be loved of God, and to be his heir.

Did you notice what it is that God himself delights in? Not in his wisdom, not in his might, not even in his riches, but in loving kindness, justice, and righteousness. Is that worth glorying in? Most men don't think so, but God does. And God ought to know. If God delights in those things, they are surely worth while.

As a matter of fact, those are just now the most needed articles in the world. They are needed in the business world, in the government, in social life, in the school, the church, and the home. Fill the world with righteousness, lovingkindness, and justice, and it would be a new world, a world worth living in. How happy everybody would be. And that is just what God wants, what he gave his Son to die for.

And the beauty about it all is, that we can all have those things the poor as well as the rich, the weak as well as the strong, the ignorant as well as the learned. These things God gives freely to those who will take them. He may limit your power to be rich, or wise, or great, but he does not limit your power to be good. The devil tries to do that, but God is stronger than the devil, and clinging close to his power, we can surely overcome.

Yes, God is our glory. Let him that glorieth, glory in the Lord, for he is most glorious, and he is our own.
Bethany Bible School, Chicago.

CHRISTIANITY VS. LIBERALISM.

THERE seem to be two strongly contrasted understandings of what Christianity is. One is that set forth by the so-called liberal Christians, who make it an all-inclusive religious sentiment, which finds the truth of God and man back of all forms of religion, and accounts Jesus as a man in a peculiar sense, used by Almighty God to demonstrate what a pure, thoughtful and God-like being man may be. The other, in the deepest humility, receives Jesus Christ as the Son of God, sent in divine mercy and love, to take upon himself the burden and penalty of the sin of mankind, and through his own death for sin, through his resurrection from the dead and through his intercession for his people, to reconcile sinful men to their God and Father, and to give them upon earth the beginning of life like that of God.

It is clear that not both of these understandings of Christianity can be true. One excludes the other. It is impossible that one should be "liberal" toward the other. It does not seem to us illiberal to believe that the founder of Christianity is the proper person to declare its meaning and spirit. Or if it is illiberal, then it is the narrowness of the truth, which Jesus Christ intimated does exist. But when the words of Jesus Christ himself are studied, the meaning of it is so clear that our liberal friends are driven to deny the authenticity

of the record, or to say that they understand the meaning of Jesus better than did either he or his disciples who wrote the record.

It seems to us that Christianity which is more liberal than Christ is mistaken Christianity. It denies or distorts the word of Christ. It assumes a life for mankind which it does not possess save by the gift of God in Christ. And, therefore, it misleads men with unfounded confidence and unwarranted hope. There is still none other name under heaven given among men, by which we must be saved. No Christian may venture to be more liberal than that. If he does, by God's grace, possess the true religion, he has been made a steward of the truth, not for himself, but for all men. In that sense he is bound to be a liberal Christian; to be open to his call to offer, give, urge the Gospel of new life in Jesus Christ.—*The Presbyterian.*

THE WONDERFUL BUNDLE.

EVERY person has a bundle or burden that they carry, invisible to mortal eye, unappreciated by moral hearts, but there it is, a real tangible, heavy burden, that oftentimes makes the heart ache, and the spirit quail; some get so used to it that they grow callous of its being there, and accustomed to it, they become indifferent to its heaviness, and live as though it were not.

What is this burden? It is sin—a heavy dead weight; an incubus to every soul. The surprising part is that each person can, if they like, get rid of this burden, and be forever free from it, but they will not; though heavy, they love it; though often a source of anxiety to them, they hug it; though told to let it go, they seem to think the parting with it a kind of difficult surgical operation, that cannot readily be performed, and act as if the burden and they were part and parcel of each other, and necessary to existence.

The Ethiopian Eunuch got rid of his as he was riding, and he went on his way rejoicing. Christian, looking at the Cross, found his unloosed from off his back, and he saw it no more. A poor woman said she had taken all her good deeds and all her bad deeds, made them up into one bundle and thrown them at the foot of the cross. What have you done with yours? Is it on thine own head, pressing thee down to hell? Is it cramping all thine energies and powers, a heavy burden pressing on thy soul to its eternal, never-ending destruction? Or have you thrown it down at the cross? Is thy load off thee and laid on Jesus Christ? If not, why not? Christ Jesus came to be, and is, the sin-bearer for you and me. He waits for thy burden of sin; he asks for it, wants it, is willing to take it. Then just give it to him and be free! Oh, the gladness and joy of heart there is in knowing that the burden of sin is taken off thyself, and knowing that the Lord laid on him the iniquity of us all.—*Exchange.*

ECHOES FROM EVERYWHERE

Out of 5,200 men and women who have received training in the Moody Bible Institute, 460 are now on the missionary field under the direction of the various boards, or in connection with independent missions.

Directors of the Aero Club of America have leased from the Garden City company 30,000 acres of level land near Mineola, L. I., for an aviation field. This is ample space for a 10-mile closed circuit or a 20-mile straight-away flight.

Three more agricultural and industrial schools have been established by the Oklahoma State board of agriculture. The third district school will be located at Broken Arrow, the fourth district at Lawton and the fifth district at Helena.

Through the rise in cotton prices in the English and American markets, James A. Patten has made \$4,000,000. He is long 200,000 bales and on every point advance in the market he makes \$10,000. Last May, Patton cleared \$5,000,000 in wheat. Since last spring cotton has advanced 500 points.

Hereafter the St. Paul road will use none but all-steel passenger cars. President A. J. Earling, accompanied by every executive member of his staff, has made a 24-hour run with a special train in which were four cars of the new type. He says the all-steel cars are in every essential satisfactory.

The annual report of the Pullman company for the fiscal year ended July 31 shows gross earnings of \$33,801,155. The net earnings were \$10,948,201, or 10.94 per cent on their stock. The surplus for the year after the payment of 8 per cent on the company's shares was \$2,949,000, raising the total surplus at the end of the fiscal year to \$9,995,000.

The American Red Cross will again this season sell anti-tuberculosis stamps and the organization has just ordered 30,000,000 of the Red Cross Christmas stamps from the printer. Other orders will be given later. Last year at Christmas \$140,000 was netted from the sale of the stamps, and it is being hoped that 1909 will be a banner year.

The city of Baltimore has adopted an ordinance which requires the testing of every electric meter by the Department of Lamps and Lighting, before the meter may be installed. A charge of ten cents is made for each inspection. Any consumer who is suspicious of his meter may have it examined by the department. A charge of \$1 is made for this service, which is borne by the consumer if the meter is registering properly, or by the company if the meter is found to be at fault.

Convict labor is being employed to build Colorado roads. South of Colorado Springs a force of nearly 100 convicts is now at work on the State boulevard to be built between that city and Canyon City. The convicts are placed on their honor and only a few guards are required. The highway is expected to be one of the finest in the West.

Evelyn Briggs Baldwin, the Arctic explorer, recently stated that he intended to make another trip to the Arctic and go on the ice drift over the apex of the earth and return between the east coast of Greenland and the west coast of Spitzbergen. It is a distance of two thousand miles, and as a progress of no more than two miles a day can be made, the journey will consume four years.

The assassin of Prince Hirobumi Ito will be tried for his crime at Port Arthur. The Japanese chief prosecutor in Korea has gone to Port Arthur from Seoul and will conduct the case. The authorities have been led to believe that the prince's slayer was a tool of a Korean anti-Japanese association called the Pyong Yang, and it is held that the prosecutor will be able to uncover the details of the plot which they are sure existed.

The quartermaster's department of the army is in the market for a large number of mules, to be delivered at St. Louis or other prominent railroad points. The schedule calls for draft mules, wheel, for four-mule teams; draft mules, lead, for four-mule teams; pack mules for mountain batteries and machine gun platoons; pack mules for pack trains, riding mules for wagon and pack trains and saddle mules for mountain batteries of artillery.

The United States forestry department has definitely decided to build an experimental station on the slopes of Pike's Peak and has selected for this purpose a tract of 40 acres near the Halfway house. Plans for the construction of the buildings are already under way. Experiments in the introduction of valuable forage plants such as Kentucky blue grass, timothy, red top and brome grass on forest ranges will be made. The altitude of the new station is in excess of 9,000 feet.

Fifty persons living in various parts of the country have signed a call for a meeting in St. Louis on November 14 of free-thinkers of the United States. The object is to adopt the religion of the future as propounded by Dr. C. W. Eliot, president emeritus of Harvard University. The call was made public by Capt. John R. Charlesworth, editor of the Blue Grass Blade of Lexington, Ky. Dr. Eliot's philosophy and that propounded by Dr. Ernest Hackett, professor of zoölogy in the University of Jena, successor of Charles Darwin, as the exponent of evolution, will be the basis of the new religion that will be made in St. Louis.

The Compagnie Generale Navigation Aerienne, the French company which bought the Wright airship rights for France, has brought actions against all the other air navigators using aeroplane machines. The main feature of the Wright patents is the flexing or bending of the tips of the wings or planes to assist in steering and turning.

Representative Sereno E. Payne of New York, chairman of the ways and means committee, has learned from James B. Reynolds, assistant secretary, that the Payne tariff act during the months of July, August, September and October to date had produced \$23,367,000 more than did the Dingley act for the same month last year. Since July 1 the receipts from customs have been \$107,365,000. The deficiency in the treasury has been reduced \$7,000,000 below last year, being \$32,000,000.

On January 1, 1910, a new mileage book will be issued by all roads members of the mileage bureau. The books will be good for 2,000 miles and will be sold for \$40, to be good on all trains. Description and signature for identification will be used, and only the purchaser may ride on the mileage. Each coupon in the book will cost the traveler 2 cents, but when traveling in States where the legal fare exceeds 2 cents a mile, a single coupon will not be good for a mile of travel. In 2½-cent States, five coupons will entitle the holder to travel four miles.

United States District Attorney Judge Sater took action recently which shows he does not agree with the Connecticut Supreme Court, which held that the congressional enactment of 1908, known as the employers' liability law, is unconstitutional. The estate of Jerry Coakley, a freight engineer who was killed on the Cincinnati, Hamilton and Dayton, brought suit for damages under the employers' liability act. Attorneys for the road moved to throw the case out of court on the ground that the employers' liability act is unconstitutional. Judge Sater ordered the attorneys to proceed with the case.

In the Belgian chamber of deputies the government's policy for reform in the Congo Independent State was announced by the minister of colonies. The colony will be opened to free trade in three successive stages, from July, 1910, to July, 1912. Natives are to be treated fairly and their taxes are to be reduced. The food tax is to be abandoned, portorage in many places to be suppressed and government agents will not be fed at the expense of the natives. King Leopold is to give \$100,000 this year and \$100,000 in 1910 to fight the sleeping sickness, and the government is to spend a large sum in improving sanitation. A first credit of \$6,000,000 to introduce these reforms will be asked.

As a result of several unpleasant scenes in which Pope Pius has recently figured because of the misbehavior of visitors to the Vatican, Major-Domo Bisleti has sent a circular letter to every Catholic prelate and institution warning them against asking papal audiences, especially for special acquaintances or for persons unless they have unimpeachable references. The latest mishap followed the admission to the papal presence of a Cologne merchant named Sternberg, a monomaniac on the subject of sociology. He reproached the Pope for the magnificence of the Vatican, saying that it was distinctly wrong that the Pope should live in such splendor while the world is filled with hungry people.

Internal revenue bureau officials do not think the corporation tax imposed by the Payne-Aldrich bill will result in any number of corporations dissolving and becoming partnerships. The tax is small, they say, and the disadvantages of a partnership are many. Recently, to avoid paying the tax, a large Chicago milling concern dissolved as a corporation and became a partnership.

M. De Morgan, at the head of the French expedition making excavations on the site of the ancient city of Susa, in Mesopotamia, spoken of in the Bible under the name of Shushan, and one time the capital of the Persian monarchs Darius and Artaxerxes, has unearthed the remains of three distinct cities, each built on the ruins of an earlier one. The oldest definite remains date back at least 4,000 years before Christ, and the place shows evidence of having been the abode of man even before that. Among the principal monuments found were four black stone pillars set up by King Khammurabi, with the law inscribed on them for the people to read.

It appears that the Siberian railroad is beginning to show the inevitable results of the haste and cheapness with which it was constructed. The sharp curves and heavy grading have put serious limitations upon traffic, and for great distances the reconstruction will involve an entirely new location. The road is to be changed from single to double track, and the officials are greatly regretting that the large and costly bridges were built to accommodate one track only. On the level plains the double tracking will not be such a serious matter; but in the heavy cuts of the mountain division, and where the steel bridges over the wide rivers will have to be rebuilt, the cost will be very high.

The evidence which Commander Peary submitted to substantiate his claim of having reached the north pole is incomplete and not sufficient to convince the members of the National Geographic Society. The committee consists of Henry Gannett of the geological survey, Admiral C. M. Chester of the bureau of equipment of the Navy Department and O. H. Tittman of the coast and geodetic survey. Mr. Gannett and Admiral Chester examined informally the records which the commander forwarded and, without calling a meeting of the full committee, decided that Commander Peary should be requested to send on more documentary evidence. Mr. Gannett and Admiral Chester refuse to comment upon the papers in their possession, and will not point out wherein Commander Peary's proof is insufficient.

The State of Indiana is considering the possibilities of engaging in the farm implement manufacturing business. James A. Reid, warden of the Michigan City prison, under the direction of Gov. Marshall, has begun an investigation to determine what agricultural implements can be made without patent infringement with a view of employing prison labor upon their manufacture. Both the Governor and the warden believe two things will be accomplished by the work; first, it will embarrass the so-called Harvester trust and, second, it will provide labor for the prisoners. The State prison is already causing some embarrassment to the harvester people because of the manufacture of binder twine at the State institution. Because of the price of the twine made by the State the trust has been forced to name reasonable rate prices in Indiana.

Among the Magazines

JUDGE LINDSEY TELLS WHY THERE IS HOPE FOR THE PEOPLE.

That was my experience in the election of 1900. Those were the lessons I learned from it. Those and one other—of another import—which I have left till the last because it was a lesson of hope, and because, in spite of all, it seems to me there is still ground for hope.

This was it:

Toward the close of September, in the campaign, Theodore Roosevelt, then Governor of New York, came to Denver, and he was challenged by Governor Thomas to defend the position of the Republican party upon certain issues of the contest. Colorado was a free-silver State, almost unanimously, and the game was to make Roosevelt either embarrass his party or himself by forcing him to handle the free-silver question before an audience that would resent the opinions of an Eastern "gold bug," however mildly he put them.

The Opera House was packed with people. Senator Lodge of Massachusetts held their attention for a time, but they were impatient to hear "Teddy." He was late. He had not yet arrived. Expectation became noisy, restless, hostile. Presently we heard the low grumble of a crowd shouting in the street. The word was cried about that he was coming. And almost immediately, in a crash of music from the band, he strode down to the footlights and faced the shouting audience.

He looked tired. But without waiting for silence, with his head down as if he were about to charge, he bared his teeth and uttered something unintelligible in a hoarse voice. The audience roared. He took a long breath, watching them, dogged, determined, filling his lungs; and then—with a sudden gesture that compelled silence—he screamed at them, with all his teeth showing: "We—stand—on a—gold—platform!"

It came to them like a blow in the face; and before they could take voice, he added, pounding out the words with his fist: "We stand for the same thing in Colorado that we stand for in New York!"

He got no further. The shout of applause that followed came in a roar of delight from a thousand throats. They cheered him as if he had said the one thing they had been waiting to hear, instead of the very thing that no Republican politician in Denver would have dared whisper to any—single one of them in the dark behind a locked door. They cheered him as if they would split their throats. A startled Democratic politician who stood near me cried: "Great G—! He hasn't converted this crowd to the gold standard, has he?" (The wisdom of politicians!) They cheered his courage, his truth, his defiance of political hedging, his honesty, his manliness. It was the cheer of pride, of love, of admiration. It was the voice of our people raised to greet those very qualities in a politician which the Beast has tried to crush. It was, to me, the voice of hope.

I went home that night resolved never to forget the

lesson. Often since, when I have faced the hoot of prejudiced opposition from my own small stage in public life, I have remembered Roosevelt, and filled my lungs again, and cleared my throat for another defiance. For I believe, in **that** way, with **our** people, there is hope.—The "Beast and the Jungle," in the November Everybody's.

WHEN THIEVES.

Once, in the Valley of Somewhere, there was a large and well-organized band of thieves, but they did not call themselves by that name, because it had become opprobrious. Instead, they assumed the more polite title "politicians."

Now, it was the habit of these politicians to prey upon the people in season and out of season, for there was no closed season. Not only that, but for a long time they made the people like it, as was proved by the fact that the people were wont to hold elections and apportion the swag and the persimmons among the most prominent. This swag they called by the euphemistic term "emoluments."

For many years they thus lived peaceably. The people were a simple folk, and seemed to be content. Indeed, they thought that civilization was impossible without politicians.

As time elapsed, however, the politicians became more greedy. In charging what the traffic would bear, they waxed more and more overbearing. Not only that, but they fought among themselves ever more and more bitterly.

"Tis well that they fight," said the poet. "When thieves fall out, honest men receive their due." And so the people rolled over on the other side and went to sleep again.

Things went on apace, but, in spite of their theories, the falling out of the thieves brought no relief to the honest men, for, though a number of honest men had apparently survived the pernicious influence of thief-rule, not one of them seemed to have any great amount of due in his possession.

At length a Wise Man, who, by the way, was neither a newspaper editor nor a preacher, came forward from one of the backward provinces of Somewhere. "Listen," said he. "Wouldn't it be nice if we could get along without any thieves at all? The devil is no better than the deep blue sea and vice versa. I have heard it said that when thieves fall out honest men receive their due. Now, the point I want to make is this: I am reliably informed that this falling-out is only a bluff. It is a sham battle arranged to conform to your theory. I got this from my son, who is engaged to a stenographer of one of the thieves. Now, look here! Thieves have too much sense to fall out. The way for us to get our due is to get rid of both sets of thieves."

And the people harkened, and the Wise Man's words listened good to them, whereupon they arose in all their democratic might and bade both sets of thieves begone.

Moral: When thieves seem to fall out, there's a hen on.
—Ellis O. Jones, in November Lippincott's.

TWO VIEWS OF MOTHERHOOD.

Some years ago, an American friend and I were passing through a street in the city of Tokyo, says Adachi Kinnosuke in the *Delineator* for November. We came upon a gateway which smiled like a May-day festival, and, like it, was full of people.

"What's all this fuss about?" my friend asked me. "Have they hit a gold mine?"

No, they had not. To the good people the occasion meant a deal more than the discovery of gold. It was the coming of a baby. The proud parents were sending out messengers into the four corners of the city announcing the glad tidings of exceeding great joy. And I told my American friend:

"Do your people make such a fuss about a baby? Babies are born every day in this country, aren't they?"

Which was true. But we look upon this matter entirely in a different way. It may be that this is one of the relics of the past, but we put emphasis upon the continuation of a family line. Confucius, whose ghost is much more powerful in Japan of today than all the prophets and philosophers now living put together, made childlessness a just ground for divorce. The coming of the baby means to a mother more than meat, aye, more than a fashionable garment. It is the social insignium with the Japanese mother; nothing defines her social rank as finally as the baby.

The Nippon society is heartless to the childless mother; it brands her as "the stone-woman"; it exposes her to the galling pity of all her more favored sisters. In the sterner days of the samurai ideal, she was an object to be shunned, like a leper. The childless mother did not dare to impose herself upon society. A rather far cry, this, from the fashionable Fifth Avenue atmosphere, isn't it?

LABOR NOT HOSTILE TO PROHIBITION.

Because here and there a labor paper has entered the field in opposition to the prohibition movement and in defense of "personal liberty" the liquor interests have been in the habit of claiming organized labor as an ally. Now *The Coast Seamen's Journal* (Lab.), of San Francisco, denounces this claim as an attempt to mislead the public. While admitting that among those elements of labor directly affected by the "dry wave"—as in the case of certain crafts which find employment in connection with the liquor business—there is some natural antagonism toward the prohibition movement, *The Journal* asserts that "this attitude is resented by the straightforward labor press." In support of this assertion it quotes two leading labor organs, *The Union Labor Advocate* (Chicago) and *The United Mine Workers' Journal* (Indianapolis). Says the *Advocate*:

"The remarkable impetus received by the prohibition movement in the past two years has brought out many problems. One of these is the attitude of labor organizations. Inviting every individual who labors to join in uplifting toil and diminishing the amount of human misery, organized labor draws into its ranks men who are engaged in the liquor traffic in various ways. These

are naturally alarmed at the prospect that their occupation may be taken from them and they be forced into the ranks of the unemployed. In the hope of stemming the tide some have endeavored to array organized labor against the prohibition movement. So far, however, they have had little success. The liquor question has many angles. There is the argument that law is brought into contempt whenever it interferes with the liberty of a citizen; but the definition of liberty is not easily agreed upon. There is the lamentable fact that a percentage of the people would be killed by the speedy and thorough withdrawal of stimulants which alone keep them alive. There is also the indisputable truth that those thrown out of employment may find it exceedingly difficult to obtain work by which they may earn a livelihood. But against these is the record of long years of suffering of liquor victims and their families, who are powerless to prevent or cure the disease—for it is a very serious disease that drags down morally as well as physically. Where lies the greatest good? Does not the correct answer to this clearly point the only course to pursue?"

The United Mine Workers' Journal, moved by another labor paper's criticisms of a labor-leader for attacking the liquor traffic, says in part:

"We are not a temperance advocate by any means, but object to the labor movement being tied to the tail of the brewers' kite or forming any entangling alliance with the liquor traffic. Let the brewers stand alone, and advocate their own cause. They are able to do it and have the means without prostituting the noble and holy cause of labor to their purposes. We must steer labor's bark as far away from the saloon as possible, not draw it closer. Labor uplifts; liquor keeps us down. We want to get up. 'See.'"

Says *The Coast Seamen's Journal* in conclusion:

"The *Journal* sympathizes with those crafts whose employment is endangered by the abolition of the liquor traffic, but it can not permit its feelings in that regard to overcome its judgment upon the main issue. Certainly it can not permit an incidental injury to the workers in these crafts to lead it into the error of compromising the whole labor movement upon a question of the most vital importance to mankind at large."—*Literary Digest*.

TENDENCIES IN MODERN EDUCATION.

(Continued from Page 1093.)

'gold coast'—courses that are a disgrace to any institution that professes to stand for the higher learning."

This is doubtless true, but the tendency is upward. Ex-President Eliot, of Harvard, who has been supposed to represent the elective system—or lack of system—in its most offensive form, in his last book comes as near an apology as one could reasonably expect for the wreck which that teaching has wrought. On the whole, we may confidently say that the sober sense of the American people has definitely rejected the doctrine that immature young men are the best judges of what an educational course should be.

Along with the deplorable state of things indicated above and in part as a result of it, there has been a frightful waste of time, money and manhood on athletics. I myself heard an educator say that the good resulting from football was so great that even if five

or six young men were killed by the game each year it ought to be continued. On my part I desire to say that in my opinion all the good ever done by football is not worth the life of one of the fellows it has done to death.

In this regard, however, I think we have a right to hope for better things. Football ought to be abolished as a game which so easily and naturally lends itself to fraud and brutality that young men cannot afford to play it. Intercollegiate games are being reduced in number and should be still further cut down. Sport should be kept sport and never allowed to degenerate into a profession. School men and parents should work together to this end until the school life of our young people becomes the beautiful, Christian thing it ought always to have been. And always our motto should be, "If we will, we can."—*Charles A. Blanchard, President of Wheaton College, in Home Herald.*

PAINTS AND WHITEWASH ON THE FARM.

NEVER apply paint or any other coating to green or unseasoned timber.

Paint the outside of buildings in the autumn after the hot weather is passed, or in the winter. Oil paint, under cold, hardens so as to be much more durable than when it dries under heat.

Experiments on the behavior of different paints for ironwork seem to show that red best resists the action of the atmosphere.

A good paint for sheet iron is made of varnish and boiled linseed oil, equal parts, add enough red lead to bring to the consistency of ordinary paint.

A good black paint for ironwork, farm implements, etc., is made by mixing two quarts of coal tar with one pint of gasoline. The gasoline thins it nicely, so that it spreads evenly. Gasoline evaporates rapidly, and if the work is not quickly finished a little more may be added to keep the proper consistency.

To protect iron from rust use red lead mixed pretty stiff with boiled oil. For small work a little japan dryer may be added and perhaps ten per cent of litharge, so as to make it dry quicker and harder. If a bolt is going through wood, coat the hole with the lead and paint the bolt, and there will be no rusting. If a piece of iron is going into some place where it cannot be washed, clean it well and then paint it with two coats of red lead.

For a good fence paint take skim-milk two quarts, fresh-slaked lime eight ounces, linseed oil six ounces, white Burgundy pitch two ounces, Spanish white three pounds. The lime is to be slaked in water exposed to the air, and then mixed with about one-fourth of the milk, the oil in which the pitch is dissolved to be added a little at a time, then the rest of the milk, and afterward the Spanish white. This is sufficient for about twenty-seven yards, two coats. If any other

color than white is desired use the color in place of a part of the Spanish white.

Whitewash may be put on with the spray pump, provided wash is thoroughly strained before pumping; otherwise particles are apt to clog in the pump. The work is rapidly done and the wash is forced into crevices where a brush could not reach.

For an outside whitewash take a clean, water-tight barrel or other suitable receptacle, and put into it a half-bushel lime. Slake it by pouring enough boiling hot water over to cover it five inches deep, and stir briskly until well slaked. When thoroughly slaked, dissolve it in water and add two pounds of sulphate of zinc and of common salt; these will cause the wash to harden and prevent its cracking. For other colors than white: For cream color, add three pounds of yellow ochre; for pearl, grey, or lead color, add lampblack; for fawn color, add four pounds umber, one pound Indian red, one pound common lampblack; for common stone color, add four pounds of raw umber and two pounds of lampblack. Before mixing the lampblack dissolve it in vinegar.

For preserving fence posts paint them with a mixture of boiled linseed oil and pulverized charcoal of the consistency of paint. Neither time nor weather will affect them. The one giving the recipe says: "I would as soon have poplar, basswood, or ash as any other kind of timber for fence posts. I have taken out basswood posts after having been set seven years that were as sound when taken out as when put in the ground."—*Successful Farming.*

The Retort Unconscious.—Magistrate (discharging prisoner)—"Now, then, I would advise you to keep away from bad company."

Prisoner (feelingly)—"Thank you, sir. You won't see me here again."—Lippincott's.

As It Often Happens.—"We tried keeping an account of our expenditures, but after all it didn't give us a very clear idea of where the money went."

"Why not?"

"Both my wife and myself had too many items that we wanted listed as sundries."—*Kansas City Journal.*

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—Position as farmer or stock raiser by young married man. Would prefer opportunity or situation in new and prosperous country near church of the Brethren. Address, J. J. R., care of Inglenook, Brethren Publishing House, Elgin, Ill.

Syracuse, Ind., June 1, 1909.

Mr. James Glass, Big Timber, Montana.

Dear Sir: I arrived home day before yesterday, after a most pleasant and instructive visit to your Montana proposition.

I have been on the lands and investigated the irrigation system of Glass Brothers Land Company, and am convinced that the essentials of a very prosperous community are there, namely, plenty of water, rich soil and much sunshine; and I would say that the fine appearance and phenomenal yields of domestic fruit orchards in the vicinity of your lands, which have no spraying or other care given them, lead me to believe that commercial orchards of great value may be grown on your lands; and I would not hesitate to plant quite liberal of the hardier apples, cherries, plums and pears, and smaller fruits in the berry line.

Because of these conditions I hope and expect to be one of the number to possess these goodly lands.

(Signed) EDWARD DEETER.

Mr. Deeter is a noted horticulturist of northern Indiana and is a son of Elder Deeter of the Church of the Brethren.

GLASS BROTHERS LAND COMPANY,
Big Timber, Montana

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

NEFF'S CORNER

If my plans as now fixed are realized, myself, wife and babies will be sitting in the sunshine of perpetual summer ere these lines appear in print. We expect to be busy, but never so much so but that, with plenty of help available, we can do more. One brother who has bought land in Mexico wants a number of acres cleared at once and sown to alfalfa. Some will want their land planted to corn, some cotton, some garbanzas, some sugar cane, some bananas, some oranges or other fruit, and my part of it will be to employ native help and oversee this work of improvement and cultivation. In fact one of the conditions that makes farming operations so very profitable in Mexico is the cheap labor there. Good hands can be had at 45 cents per day, they boarding themselves. This being the case, many will buy land in Mexico (are doing so, in fact) and have it farmed for the handsome income it brings, and others with a view of going to it after it has been brought into a good state of cultivation. By making a down payment of \$6.25 per acre for the land and investing a small sum in improvements investors realize a good income from their land in a very short time. The land can be bought in tracts of ten acres or more. For further information address:

JAMES M. NEFF,

Apartado 65 Culiacan, Sinaloa, Mexico.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

Price, in artistic cloth,\$1.50

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price,30 cents

YOUR CHOICE OF LOCATION

"Church Extension by Colonization" is our Motto. We are locating our second Colony, with others to follow in other states in the near future.

COLONY NUMBER ONE

is located in the famous San Joaquin Valley, in "Sunny Stanislaus" county, near the center of California, adjoining the new town of EMPIRE. An organized Church of the Brethren is holding regular services and Sunday school in the new colony.

This location was selected because of its fine climate; snows and thunder storms are unknown there; because of its rich soil and fine irrigation system enable a great variety of crops to be grown; and because the excellent transportation facilities to the nearby markets make it easy to dispose of the products to good advantage.

Alfalfa is cut from four to six times a year, yielding from five to ten tons of hay annually, which sells from \$10.00 to \$15.00 per ton. All kinds of stock, dairying and poultry are handled with profit. The alfalfa remains green all winter.

All kinds of California fruits, nuts, berries and truck can be grown here, yielding good incomes.

A good Dairy Cow will yield about \$120.00 annually.

WHAT OTHERS SAY

A Pennsylvanian who has lived near Empire for five years says: "I am raising alfalfa only; that which was one year old and over, yielded nine tons per acre this year. We have 90 acres in alfalfa and are preparing to seed 100 acres more."—J. M. Bombarger.

A North Dakotan feels this way: "I will frankly say that the Empire location has more good points

than any thing I ever saw, you should not have much trouble in locating people here, even if prices are a little high.

Personally I am partial to the land around Empire. After about three week's investigation I find the land almost faultless in location, soil, drainage, railroads to markets. It will stand the very closest inspection."—J. W. Deardorff.

COLONY NUMBER TWO

This colony is being located near Portage la Prairie, Manitoba, in the great wheat Belt of Canada, about sixty miles west of Winnipeg, the Chicago of Western Canada, a city of over 100,000 population.

Four trunk-line railroads pass through the section in which the colony is located, giving excellent transportation to nearby markets. The raising of stock, wheat, oats, barley and grass are the principal pursuits here. Immense crops are grown annually of these cereals, wheat yielding from 20 to 40 bushels per acre. Lands are little higher here than in the newer sections; wheat brings from 10 to 15 cents per bushel more than in the western provinces. Homeseekers will find it advantageous to investigate our colony propositions here and elsewhere. Write us for fuller information about prices, terms and special rates for homeseekers.

THE INGLENOOK

November 16, 1909

One Dollar Per Year

A SONG OF HOME.

JENNIE TAYLOR.

There's a tiny, old-fashioned dwelling
Nestling 'mong the quiet hills
Out a thought back to that farmhouse fondly
STAYS.
'Twas our home in happy childhood
I can almost see it now,
As in fancy I recall those golden days.

Near it grew the larched wildwood
Sunny field of ripening grain,
Just beyond them lay the meadow long and wide,
Down the line the sweet white clover
Frank the early morning dew
There wild flowers and fringed ferns grew
Side by side.

In the pasture near the woodlands,
Watched the cunning, bright-eyed squirrel
Fearful lest we should win him his winter
store;
From the distant, grassy uplands,
Echoed cheery, tinkling bells,
And, anon the swift-winged birds went sailing
over.

Long we've missed the old oak's shade,
Low of cattle, song of bird
Fragrant blossoms climbing round the open
door;
Silvery moonlight on the hills,
Whispering breezes, orchards white,
Gurgling streamlet hurrying onward as of
yore.

For the many ties that bound us
Are all broken long ago,
Now, our feet no longer cross the time-worn
sill;
There are strangers on the homestead,
Yet, old memories stir the heart,
And we think of it as home our old home
still.

Tipton, Iowa.

Read and Learn OF THE Great Future for Miami Valley in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

Post Card No. 26

Old Germantown Church

A beautiful souvenir card of the church at Germantown (Philadelphia), Pa. This was the first church in America built by the Brethren, and has a very interesting history. The card is finished by the "Photo Chrome" process, in colors. Our new stock has just arrived from the factory in Germany and we are prepared to give your orders prompt attention.

Price, per pack of six,15 cents
Two packs,25 cents

BRETHREN PUBLISHING HOUSE

TRAINING THE TEACHER

BRETHREN EDITION

Twenty lessons on the Bible by Dr. Schauffler.

Ten lessons on the Pupil by Mrs. Lamoreaux.

Ten lessons on the Teacher by Dr. Brumbaugh.

Ten lessons on the School by Mr. Lawrance.

Special Chapters

"How the Bible came to us," by Dr. Price.

"Organizing and conducting a Teacher-Training class," by Rev. Oliver.

The Gist of the Books.

Teaching Hints.

Test questions at the end of each lesson.

Review test questions at the end of every fifth or sixth lesson. The official textbook for Teacher-Training Classes of the Church of the Brethren. 272 pages. Cloth bound, prepaid, 50 cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Twentieth Century Secretary's Book. For a school of 20 classes. Especially adapted for use in connection with "The Twentieth Century Sunday-school Record System." May be used to advantage with any system of records. Records the Attendance, Punctuality, Bible Bringing, and Offering by classes and departments. Two pages for each of 52 Sundays, 8 pages for quarterly reports and 2 pages for yearly summary. Printed on ledger paper. Size, 5½x7½. Substantially bound. Limp cloth cover. Price, postpaid, 40 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

NO. 14. MAP OF THE ROMAN EMPIRE. Illustrating the Journeys of the Apostle Paul based on recent explorations of Ramsay, Sterrett and others. Size, 36 x 58 inches. Lithographed in Four Colors on Muslin of Superior Quality. Price, postpaid,\$1.00

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA, IDAHO, OF SEPT. 30, 1909.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Scam, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 46.

MENTAL TELEPATHY

J. S. FLORY

THE service of wireless telegraphy has given to the world new characteristics of a natural force long known to exist—that of ether. Wireless telegraphy has proved that ether is not disturbed by the violent disturbances of air, as proven by storms in no way interfering with electric waves in their passage through space; just so the discovery has been made that mental force readily passes through all phases of natural environments. Much can be learned of the nature of divinity of mind through the scientific study of mental telegraphy.

While it is true there are many people that are sceptical in regard to mental telepathy, this by no means is an evidence of its being a fallacy. The writer of these lines at one time had little or no faith in the claims of mental telepathy,—that the vibrations of mind waves in one mind could affect in any way the mind of another person near or at a distance. One thing he was convinced of long ago and that was that the essential features of mind force or power belonged largely to what is termed spiritual forces and partook largely of the things belonging to the supernatural world where divinity reigns. The hardest lesson for the creature, made in the likeness of his Creator, to learn is that with God, his Father, what is called the natural world and spiritual world with God are the same. Man in his mode of expression differentiates in regard to the two because he was made dual and has need of the two worlds, or we might say the two are necessary for his complete unfolding into the full fruition of his inheritance or intended purpose of God in his creation.

Nothing is more fully taught in the Bible than that this world, the material universe, is not the only world for man. In its nature, as man looks at it, all is transitory. It is not his “continuing city.” “The things that are seen are temporal,” but “the things that are not seen are eternal.” That at once opens up the great mystery of the truth of godliness—or Godlikeness—so that we can readily see there is no distinction in the

mind of God. It is all in all divine perfection, or divine purpose. Even in divinity there is no measurement as to space or distances. All such expressions of man for giving understanding to his intelligence relating to the things he calls natural sink out of sight in the positiveness of universal divinity, as it applies to all things animate and inanimate. The immanence of God is everywhere. It is a self-evident fact that the Creator of man if he made man in his own likeness—like himself—would endow him with faculties or qualities of character coequal with himself in so far as he is a part of the divine entity. Need we then wonder man is called the “offspring of God” and a colaborer with him in the work of human endeavor?

Having taken into earnest consideration these sublime truths, it was not long before we began to find out some of the marvelous wonders of mind energy and that it was as possible to get intelligent understanding of things spiritual as it was to understand the whys and wherefores of things natural. And why should not this be so when we are taught that “spiritual things are spiritually discerned”? That is, spiritually understood. No intelligent mind should be satisfied with the theory that supernatural things are not to be looked into. It is superstition and ignorance that blocks the way of rightful progress in the sciences of soul study. My researches and experiences have demonstrated to me the fact that mental telepathy is a positive power of the rational mind and I know of no one who has investigated the subject in an intelligent manner but that has come to the same conclusion.

It is one of the powers of the mind of great importance in our life work, no matter what our profession. When we know the laws governing the mind we have something that reaches much farther than simply a stimulant for intelligence. We have a weapon of might and power to be *master of the situation* in which we may choose to walk rightly through life. It is an old adage, “A little learning is a dangerous thing.” It may

be to those who misapply it but not to those who apply it wisely.

The first step for every student to take who desires to learn the benefits of mental telepathy is to learn what different characteristics and qualities are embodied in the realm of man's mentality. Learning as one will that every human being has the peculiarity of a dual mind or of two minds, one that has to do with the natural man or natural things, the other the subconscious or spiritual phase of the mind, the student will soon learn he is observing the wonderful reality of passing the dividing line between the natural and spiritual makeup of man. He will see that the one phase of the mind reasons, both deducting and inducting, the other takes for granted as true things given to it according to the judgment of the court of inquiry of the reasoning or natural mind and the verdict so given to the subconscious mind becomes the pilot to govern the whole world of the man in whom the powers of mind are supreme. We then know why "as a man thinketh so is he." The student likewise will soon learn to know that the power of mind force is of a nature akin to divinity. The mind of God is a quality that impresses itself without question on the mentality of the human being and in this way through all ages God spake to man and yet does so through the immanence of his Spirit. If this be so as it is, an unqualified and unquestionable truth, can there be any logical reason to deny the possibility of the powers of divinity to

do the same from one so endowed to another of like nature when there is harmony prevailing? Proof is not lacking that this is so. Just as it is true of wireless telegraphy so is it true of mental telegraphy. As distance is no hindering factor in the one, neither is it in the other. The proofs are just as positive in the one as in the other. The experienced operator in either science needs no proof to convince him of its reality.

Many mysteries concerning electricity and the energies of ether have been solved by the discovery of wireless telegraphy. Just so great and marvelous are the solving of hidden mysteries relative to the spiritual nature of man and his relation to the universe by mental telepathy. Through the transference of thought the supernatural in religion becomes a matter of true knowledge and we do know that it no longer is a matter of visionary mists. Evidence of the immortality of the soul is a known reality of such significance that no one need to question its verity. Faith has become to believe in deed and truth what Paul long ago taught and knew it was,—a substantial entity of divine power, *much more* than an intellectual belief. It is the same in power and force as the omnipotent *will* of God in the possession of his offspring, and rightly used becomes the life of God and the power of God. This being so, is it not worth our while to dig deep for the knowledge that will unlock to man the mystery of divinity? First seeking the kingdom of God and his righteousness the treasures of God are ours by grace.

Pasadena, Cal.

SOME AMERICANS OF ACHIEVEMENT

O. H. KIMMEL

Samuel Finley Breeze Morse.

WHO has not received, at some time or other, the little yellow envelope marked Western Union in great black letters? Have you not hastily and sometimes tremblingly opened the envelope in your eagerness to get the two or three lines of telegraphic news that are therein contained? Yes, and how our grandfathers and their ancestors got through the world without the magnetic telegraph is a mystery to us. The art of printing is said to be the greatest invention by man. The magnetic telegraph ranks in the line of invention next to the art of printing, but the art of printing came centuries ago, and the telegraph is a belated acquisition of our own age, and of the generation of our fathers or grandfathers. The little device is so simple compared with almost all important inventions. It is easily under-

stood by the most casual student, and it is easily operated, yet it derives its power from the great mysterious fluid, electricity.

Yet, even if it does require electricity to make it effective we wonder why it was not discovered many years ago,—ages ago, instead of in this late age. How many, many years of the world's time have rolled away without the benefits of this great invention. Yet, when it came to us in this late time, the world was so skeptical of it that the inventor was compelled to undergo years of privation and hardship before he could convince the people that his scheme of conveying news from one place to another was of any merit, and of any commercial worth.

The inventor of the telegraph, Samuel F. B. Morse, was born near the old Bunker Hill battle ground in Massachusetts in April in 1791. His father was a min-

ister and author, but the boy early showed a natural aptitude for art, and after studying at Yale he became the pupil of the great art teacher, Washington Allston, and studied under him on both continents. After working in his chosen profession at Charleston, Washington and Albany, he settled in New York, and in 1825 laid the foundations to the National Academy of Design and became its first president. In this same year Morse renewed his interest in electrical study which he had shown at Yale, but he continued to pursue his regular art work and in 1829 again went abroad to study the great masters in art.

On his way home from Europe three years later he discussed the properties of the electro magnet with his fellow voyagers; during this discussion he stated, "If the presence of electricity can be made visible in any part of a circuit, I see no reason why intelligence may not be carried or transmitted by electricity."

With this statement burning in his mind he landed in New York with the determination to investigate this subject until he was satisfied as to whether news could be transferred by electricity or not. So he began his investigations, and worked almost incessantly, neglected his business until it ceased to be remunerative, and for twelve long years the struggle to live and perfect his invention is a pitiful story to read.

But, as in all things temporal, the end to the struggles came at last. In 1835 he discovered the relay and by 1837 an instrument in his room at the university building attached to a circuit of seventeen hundred feet of copper wire was exhibited to a few friends. It worked most satisfactorily, and the Messrs. Vail, Iron and Brass Workers in New Jersey, became copartners with him. He patented the telegraph in September, 1837, and at once petitioned Congress for an appropriation to subject it to an experiment over a length of country sufficient to demonstrate its value. This appropriation came from Congress after a period of intercession by the friends of Morse embracing six years. When the appropriation came the line was built, after long delays, and the usefulness of the telegraph was demonstrated.

The trials of the inventor were now practically at an end. As usually happens in such cases, as soon as the value of the telegraph became apparent, others came forward with machines which they claimed were the original models from which Morse infringed his patent; but Morse soon proved that his was the original machine and his patent was fully protected. Then remuneration came to him. By 1858 he had received the highest distinction from various foreign countries and the handsome sum of four hundred thousand francs. All civilized countries soon realized the great value of the invention, and within a comparatively short time after its successful demonstration when it

ticked off "What hath God wrought!" it had spread to the remotest corners of civilization until all the civilized world was familiar with the workings of the wonderful instrument. Ere long, too, it stretched itself across the ocean and bound the two continents together in its magnetic hold. Morse himself materially assisted in the laying of the first Atlantic cable, and though it was a failure, the fact was demonstrated through this cable that ultimately it would be a success, which, as we know, it was, and which Morse lived to see working in the best fashion.

The inventor of the telegraph has contributed more to the happiness and convenience of man

than any man of modern times, and perhaps more than any man except the inventor of printing. Through the work of Morse we bind all the world together. We know the happenings of the world as soon as the act takes place. With what it has accomplished, and with what it promises through its improvements, through wireless and other improvements it is destined to continue to be one of the great conveniences of man.

"It is unfortunate that so many creators of beautiful things, beautiful poetry, beautiful music, beautiful paintings, don't live the beautiful lives of those who can't create anything except fine, healthy sentiments."

Historic New England

T. H. FERNALD, BELFAST, MAINE

Introduction.

IN preparing a series of articles on the history of a country or any section thereof, there is much that must be written that while not bearing directly upon the location, yet indirectly it does, and to make the history complete and intelligible must be given. So in this series of articles on the history of New England there is much of this nature that will of necessity be given to make it complete.

Part of the early history of this section of the country is rejected by some historians, while others, among them the noted writer, Prof. John Clark Ridpath, accept it as authentic. Ridpath says: "Since 1838, when through the efforts of Rafn and the Royal Society of Copenhagen, the Scandinavian Sagas (legends, traditions, history) have been submitted to the critical judgment of Europe, all ground of doubt has been removed relating to the Norse discoveries in the West at the close of the tenth and beginning of the eleventh century."

Among the portions of the history of New England and vicinity, which are rejected by some and accepted by others, is the discovery of this section by the Norse. This is given in these articles, as it is interesting to know that this section was seen before the English landed and settled here. But while these discoveries amounted to no lasting benefits to this country or the world at large—only to a small party of adventurers—we date the actual discovery of New England to the more beneficial ones later.

Chapter I.

FROM the Sagas referred to above, we learn that the section of our country known as New England was reached in the year A. D. 986 by people from Scandinavia. In that year a Norse sea captain named Herjulfson, with his crew, sailing from Iceland to Greenland, was caught in a terrible storm and being turned from his course was carried to Labrador or Newfoundland. They saw the unknown land several times but did not attempt to land. The coast was bleak and low, and the hinterland was covered with dense forests.

On reaching Greenland this Norse captain and his men spread the story abroad of the new country they had found, but did not know whether it was continent or island. Fourteen years later what is by some historical writers claimed to be the actual discovery of

America, was made by Prince Leif, usually called Leif Erickson, who wishing to know the truth about this new country, sailed westward from Greenland with a large crew and in the spring of 1001 landed on Labrador. Prompted by the adventurous spirit of his people he went ashore and explored the coast for considerable distance. They found the climate milder and the country more attractive than that of Greenland, and were in no haste to return. Coasting southward they discovered what is now a part of New England, where they remained for more than a year.

In the year 1002 a brother of Leif, Thorwald, made a voyage to Maine and Massachusetts, and is said to have been killed in a conflict with the natives at what is now Fall River, Mass. In 1005 another brother, Thorstein, came with a band, and two years later Thorfinn Karlsefen, "the most distinguished mariner of his day," arrived with a party of one hundred and fifty men, exploring along the coast of Massachusetts and Rhode Island.

The Norse settlements which had been made, being feeble were soon broken up. There being only a few savages in the country, commerce was impossible, as the natives "had no disposition to buy and nothing to sell." The spirit of adventure soon died out and these Norse sea-rovers returned to their own country. The new country, as compared with their own, was delightful and fertile, wild grapes, berries, etc., growing in abundance. For this reason the country which is now the eastern part of Massachusetts, and Rhode Island was by them called Vineland.

We cannot doubt but the Norse made settlements in Massachusetts and Rhode Island, for remains are to be found at Newport, Garriet's Point, on Fall River, and many other places, which seem to point very clearly to such events. Among these people the place and name of Vineland were soon forgotten.

These earliest settlers of our country were sea-rovers, and hardy adventurers, reckless and lawless. Before their discovery of America, they had taken by siege the better parts of France and England. The monarchs of England after William the Conqueror—who was a grandson of a Norse sea-king—were descendants of this people. They were rovers of the sea, pirates and freebooters, warriors, wearing hoods surmounted with eagles' wings and walrus' tusks, mailed armor, and their robes were the skins of polar bears.

One writer says: "Woe to the people upon whose defenseless coast the Vikings landed with sword and torch." Their wayward life and ferocious disposition are well portrayed in one of their own ballads:

"He scorns to rest 'neath the smoky rafter,
He plows with his boat the roaring deep;
The billows boil and the storm howls after—
But the tempest is only a thing of laughter—
The sea-king loves it better than sleep."

Let us now leave the disputed part of the history of New England, and consider this location, beginning with its actual discovery and settlement—those which have been beneficial to this country and the world at large. Chapter Two will contain accounts of the earliest discoveries and settlements of this section rather than beginning at Columbus, as we are to deal entirely with New England.

A DISPATCH FROM MARYLAND COLLEGIATE INSTITUTE.

THIS article finds us one month farther advanced in our school work. October has been a month of profit and interest to the teachers and students. The campus is now especially delightful and our environments are such as to gladden the heart of each student present.

Athletics are by no means neglected by us. While we thus far have no extensive gymnasium equipments, our campus is ample for such games and sports as will contribute to bodily strength.

As students we are all very much interested in our class-room work. The thoughts there received are cherished as golden treasures and retained in memory for future use. The astronomy class is spending considerable time, observing the visible heavens. A large number of the constellations have been traced out and their relative positions noticed. The telescope is used in observing the sun, moon, and planets. The opportunity for observing the latter is now especially good. Venus is in the western sky in the evening. At present one-half its disk is lighted and it is, therefore, at about quadrature with respect to the earth and sun. Mars, during the evening, is in the eastern heavens and reaches the zenith between 10 and 11 P. M. It is now about 38,000,000 miles from the earth, nearer than it has been for a long time or will be for about fifteen years. Saturn is now in the eastern heavens during the evening and reaches the zenith a little later than Mars. The three rings surrounding this planet make it an object of wonderful interest. The plane of these rings is at present almost parallel to a line drawn from the earth to the planet. Giant Jupiter is to be seen in the east in the morning, rising a few hours ahead of the sun.

The motto of our class in surveying is, "Learn to do by doing." The surveys of several large tracts of land, in this vicinity, have been made, under the direction of

our instructor, and the calculations were made by the members of the class. Success, in accuracy, has been obtained. We employ chiefly the "Latitude and Departure" method.

In logic our time has been employed in the study of inductive and deductive reasoning and the nature of thought. Special interest has been manifested in the subject of "cause." It is fascinating to note that no phenomenon or action is the result of mere chance but all may be traced to some more or less remote cause. Much attention is being devoted to the subject of observation. One important difference between the great and little mind is that the former is very keen in observing even the minutest objects and actions, in this great "cosmos." The latter obtains only a general idea of what is taking place.

The history classes have been carefully studying the history of ancient Greece. In reviewing our study of the Orient one principle was given special notice: namely, the orientals, while they possessed a rude civilization, after they reached a certain stage, have advanced farther only so far as they have been helped by western nations. Greece, the oldest nation of the Occident, has contributed almost unbounded wealth to later civilization. It has been noticed that the battle of Marathon (490 B. C.) was one of the most important contests in the world's history. The liberty-loving Greeks were victorious and, consequently, were not impeded in handing their advanced ideas on to later nations. Had despotic Persia been the victor, we know not how great would have been the blow to later civilization.

The biological work is confined almost wholly to the laboratory. Our instructor is endeavoring to procure a large collection of skeletons of animals, with the purpose of showing to students the various structures of vertebrates. The skeletons of a cat and rabbit have thus far been obtained. The animals were cooked and the flesh carefully removed from the bones. The specimens will be kept for future study. The class at present is studying the earthworm (*Lumbicus Terrestris*). The structure of this crawler is interesting.

Our art department is well filled this session. We have three large classes in free-hand drawing. Their work since school opened has been done chiefly out of doors, making sketches of scenery and objects of interest. We have a class studying geometrical drawing preparatory to their course in mechanical drawing for machinery.

Besides these there are those making a specialty of art. They are studying oil painting, water color, pastel, and various other kinds of black and white work. These students had, until the last few lessons, been enjoying painting out of doors where they find pleasing material at this season for making sketches and paintings.

The first great enjoyment for our music, as well as all other departments, was the entertainment given on the evening of Oct. 27, by the "Music Makers Co." This company is a male quartet and the attraction was the first number of our entertainment and lecture

course. Their program consisted of quartets, solos, etc. Their chief attraction was a five octave myrambophone, an instrument with a peculiarly sweet mellow tone.

Union Bridge, Md.

JOHN E. DOTTERER.

A MISCALCULATION

MAUD HAWKINS

"WARREN, are you going to town today?" said Mrs. Closefist to her husband one morning late in autumn as she cleared away the breakfast things. She had just returned from the stables where she had been engaged in milking five cows after which a heavy churning must be done by hand in the absence of any modern appliances to make the task easier.

"Yes, I suppose I will *have to*," was the surly reply, "That pesky brown team won't work much longer if I don't get them shod, although I don't see how I am to spare the money just now. I put it off as long as I could thinking I might get my fall work done and they would not need shoes for the winter."

"Yes, but they are your road horses. You surely will have them shod for driving this winter," said his wife.

"Oh, I guess we can get along. We do not need to go out much in winter, just to the store for groceries and tobacco."

"And to church, Warren."

"Oh, bother the church. We will have to cut that out this year. There has been such a drouth the crops are about a failure and we will have to economize on something. If we stay at home it will save new wraps, shoes and finery for all, also the collection which is no small item for my large family, with only one pair of hands to provide and support them all."

"But, Warren, the two older boys have done men's work this year. Surely they have helped some, and Mary has saved the expense of a hired girl; besides I have done enough to pay for my board while caring for baby, and the two little boys are worth something in the line of chores and errands, and they have gathered and sold nuts enough to pay for their winter clothes. It doesn't seem that it *all* rests on you."

"Well, it all comes by me just the same. Where did the boys get the nuts and berries they sold but from my fields? and who fed them while they were doing it? Where did the big boys and Mary have a good home while they were doing so much work, but with me? But just like you women, you can never understand what it takes to get a living for a large family. You just imagine that money grows, without any

effort, simply because *you* don't happen to have to work for it."

Mrs. Closefist said no more, but wondered as she mechanically washed the dishes why *her* work did not amount to anything, and if she and the children really were a burden to her husband. She realized that he worked very hard but so did they all. She finally came to the conclusion, that, as a matter of fact, it all depended on who carried the pocketbook as to who provided for the family, for surely she did work for her living even if Warren did think that it did not count.

Before Mr. Closefist started to town he came into the kitchen for his whip which he always kept hanging behind the door for fear it might be stolen from the barn if left there. As he started out his wife timidly asked him to get baby a pair of shoes, but he snappishly replied that he believed he had just told her that he had no money even to pay for the horseshoeing, that he had been obliged to shell out ten bushels of corn to sell in order to get the money.

"How much do you get for the corn?" she asked.

"I don't expect that I can get more than fifty cents a bushel," replied Warren.

"It won't take all that to shoe the horses will it?" was her next question.

"I don't know; they always try to rob a man down there if he has to have anything done."

"Could you not take a few bushels more then? two would do."

"Oh, yes, I can sell it all for foolishness, then where will we get any money to live on after the corn is gone? You would be a good manager, Jane, if you had to look after things. We would soon go to the poor-house."

"But, Warren, Tom says you will have more than two thousand bushels."

"Tom, Tom, he retorted angrily, "How does Tom know so much about my business?"

"He worked in the corn all summer, and he naturally would have *some* idea about it," suggested she.

"Yes, there it goes again. *Tom did it all*. I will soon be of no account around here, when Tom manages

my affairs and does all the work. To be sure, he does *some* work, but he had no idea of business. If I did not look after things you would all come to want. He could not be trusted to sell a bushel of corn or make a bargain. He would be sure to make a blunder and lose all. You and Tom would be bright ideas to do business. It takes some one who understands how."

"Perhaps if he had been given a chance he might do even as well as his father."

"No, he hasn't had a chance has he? I'd like to know what you'd have me do for him more than I do? He has had a better chance than *I* ever had, and what was good enough for *me* ought to be for *him*."

With that outburst of temper he slammed the door after him and was soon plodding along the road to town.

When he drove up to the blacksmith shop his wrath had not yet cooled and he surlily inquired of the smiling smith how much he wanted for shoeing a horse.

"Twenty-five cents a shoe," replied he.

"Well, I declare, you think we farmers are made of money, don't ye?" he snarled.

"Oh, no, but you have your share," was the good-natured reply.

"Not generally. We have to work like slaves and we can't raise much that pays us anything except a little corn, and that is so poor this year that it will hardly pay for horsefeed and shoeing of that there team."

"Why, I understood that you would have nigh on two thousand bushels this year."

"Yes, but when expenses and help are paid there won't be much left."

"I heard that your boys take the place of hired men this year," said the smith.

Mr. Closefist's anger rose higher at the mention of the boys' work, but he was too discreet to allow the smith to discover it, but he mentally vowed to take revenge on his wife and boys when he reached home. They had no business to be telling his affairs to outsiders, and who else had told it? Was not the smith repeating the same words that his wife had used in the morning? Had he not a right to do by *his own* boys as he chose, and had she any right to interfere in *his* affairs? Did she want him to make gentlemen of them? But he merely said to the smith that it takes a lot of money to feed and clothe two growing boys and furnish them with expense money. Quite as much as to pay for help. "It takes all I can rake and scrape to do that and keep them all winter."

The smith smiled, for he knew that the boys did odd jobs when work at home was slack in order to get respectable clothes, and as for spending money, they never had any.

"And then the corn hain't sold yet and I ain't got the money. I brought down a few bushels to try to

sell, but expect I won't get anything for it. Now can't you do it for *twenty cents cash*?"

"No, twenty-five cents a shoe is my price," said the smith.

"Well, if I get *both* horses shod, it will come cheaper won't it?" pleaded Warren.

"No, no, I can't do it," was the reply, "but I will take my pay in corn if that will help you out any. What is your price?"

"W-a-ll, I suppose I can take fifty cents a bushel for this lot since it's you, but I ought to have more considering the hard work and expense it takes to raise it."

"If I take *all* you brought in it will come cheaper won't it?" said the smith with a mischievous smile.

"What, take less than fifty cents for my corn? I think not; that is cheap enough I am sure, counting what it costs to keep a team shod," said he wrathfully.

"Well, then," proposed the smith, "if you will drop ten cents on your corn I will deduct ten cents on each pair of shoes."

"No, no, take forty cents for my corn! No never."

The farmer was about to leave the shop, when a happy thought seemed to have suddenly struck the smith. Whether it was premeditated or not we are unable to say. Being on the verge of losing a customer he may have quickly formulated a plan to call him back, and being always on the alert for business he usually resorted to various tactics for retaining customers.

"Hold on, Warren," he said, "I *will* come down a little rather than to see you go away."

"All right, I thought you would not lose a good customer for the sake of a few cents," said Closefist. "What is your offer?"

"You may pay me by the *shoe nail* and in *kernels of corn*."

"How's that?" said Warren, beaming.

"Well, you may give me one kernel for the *first shoe* nail, two for the second, four for the third and so on in the ratio of two, for *both horses*."

Warren's eyes brightened. Here was a chance to drive a good bargain.

"Will you shoe them both at that rate?"

"Sure," ejaculated the smith.

A sharp-featured farmer standing by took in the situation at once and suggested they draw it up in writing, that *both* horses be shod *all around* at that rate, "fearing," he said with a grin, "that the *smith* might back out when one horse was shod."

"Yes, yes, to be sure, glad you spoke of it, thanks," said Warren, now in high spirits. "Business is business. I like to do things on the square and have everything settled so there can be no kicking," the same time mentally seeing how he would boast to Tom and his wife of his careful method of doing business.

"All right," said the smith with apparent reluctance, but behind the assumed frown there was a roguish smile as he exchanged secret glances with the other farmer.

A business man who had been listening to the conversation was prevailed upon by Warren to draw up the agreement without any recompense other than the pleasure derived from witnessing the result of the transaction.

"Did you put in *both* horses?" said Closefist, anxiously, when the document was presented for his signature.

"Oh, yes, *both* horses, that is the best of the bargain," said the man.

"You bet," giggled Warren as he affixed his name to the paper with an air of much satisfaction.

"Now go ahead, Blacksmith, you may have your pay right down. I will bring in a bag of corn and count it out myself honestly, as fast as a nail is driven. I believe in being honest if I am poor."

He took a pail and poured it full of corn. As he came in the smith said, "You needn't be in a hurry, Warren, you may bring me a carload when you shell, and the rest at your convenience."

Warren laughed uproariously at the seeming joke. He felt in fine spirits for getting such a good bargain.

By this time there was a goodly crowd gathered to witness the shoeing and the counting out of the corn. Some with queer expressions on their faces, others looking perplexed, and still others looking very mischievous.

The smith went to work very deliberately, paring the hoof nicely, saying that this was not in the bargain, but he would do it. Warren replied, "Go ahead Blacksmith, I will donate a half bushel for that part, old man." He was so elated he felt in the mood to use endearing names and was almost willing to be generous.

The smith smiled and kept to work. Tap, tap, tap, one nail in and clinched. "One nail," shouted the smith.

"One kernel," echoed Warren as he laid it out on the bench which he had selected to hold the corn, with much ado and a flourish.

Tap, tap, tap, "Two nails,"

"Two kernels," chuckled Warren as two more were laid beside their lone companion.

Tap, tap, tap, "Three nails."

"Four kernels," piped Warren. "The cheapest shoe nails I ever paid for."

"Four nails."

"Eight kernels." Warren was jubilant.

"Five nails."

"Sixteen kernels." And so on till eight nails were driven and called off and the corresponding number of kernels was distributed along on the bench in groups.

One hundred and twenty-eight kernels for the last nail. The kernels were all counted and there were found to be two hundred fifty-five. Then Warren and some others did some multiplying in their heads or with pencil or chalk and they all declared that the eight shoes would cost just two thousand forty kernels. That surely was getting work done cheaply.

The next foot was attacked with the same proceedings. Some of the onlookers began to betray signs of beginning to see something wrong, while others were making innumerable figures on scraps of paper or chalk marks on the wall, pieces of board, on any place convenient. The figures getting beyond their comprehension or the extent of their working space, they one by one gave up in despair. The bench becoming crowded, the corn was piled along on the floor. Absolute silence reigned in the shop save for the tapping of the hammer, when the second shoe was called off.

The smile on the faces of some became broader and Warren began to look serious and called for some one to come and help him as he was not used to counting when there was so much talking going on. A helper volunteered and 32,768 kernels were counted out after seven more men came to the rescue of the counters.

About this time a third shoe was called off as having the first nail driven. Some one with a pencil informed the eager crowd that 65,536 kernels would now have to be counted out. Warren was mopping his face with his bandana handkerchief, greatly perplexed and excited. The next nail was soon called out. They had just begun counting for the first, and Warren in great alarm exclaimed. "Consarn it all, it will take the whole ten bushels at this rate."

"I wouldn't doubt it," said the smith, and kept on shoeing.

Another nail was called off and the helpers declared that they could count no longer and agreed to reckon it up and help count them out some other time when they could get a week off.

Warren was wild, "Say, smith, you needn't bother with the off hoss after all," shouted he, the perspiration running down his face. "I'll give you off on him."

"Oh, no, it's in the contract, you know, and business is business. I believe in doing things on the square," said the smith.

Warren was crazed. "It will take all my crop," he declared.

"Of course," quietly said the smith who was very composed while Warren raved. Some of the onlookers who had thought the smith a little lacking in his calculations, changed their minds. Warren stamped around and used very strong language, but the smith kept on shoeing. At length in the heat of his great excitement he dealt the smith a blow which landed him under the feet of the horse. But he arose and quietly

went on shoeing. Warren, enraged beyond endurance, tried to repeat the act but was prevented by the bystanders. He continued to rave and threaten with much gesticulation of his long thin arms and hands. Finally an officer came and he was taken to prison and fined with a bond for the assurance of peace, over his head before he was released.

He returned very much sobered and the team was turned over to their owner who after offering twenty-five cents a shoe offered fifty, then one dollar, and then drove away much crestfallen, declaring that he "would not pay a red cent."

The smith was obliged to sue him for his pay and obtained judgment. Warren employed two men giving them three dollars per day for a week to count out the corn. After working faithfully a day they declared it impossible for any human being to count that amount of corn and remain sane, but finally hit upon a plan. They counted the number of kernels in a quart, they then multiplied that number by thirty-two and obtained the number in a bushel. Then by a good deal of multiplying obtained the number required to pay the debt for the eight shoes. Dividing this by the number of kernels in a bushel they had approximately the number of bushels required.

The smith agreed to accept these figures and Warren had to agree to deliver the corn as fast as it was raised. He also had to pay the fine, the cost of the lawsuit and the men for counting, but by it he learned that there was such a thing as being a penny wise and a pound foolish.

The smith was not as avaricious as he might have seemed, for as the corn was delivered, after taking out his rightful pay and furnishing Tom and Mary as well as the rest of the children with suitable clothing, sent them to college, paying for help in their places. He also provided comfortable clothing for Mrs. Closefist and plenty of rest and vacations. The remainder of the money he managed to get back into the hands of Warren in one way or other. But whenever he showed signs of being niggardly with his family, the smith furnished them with their needs and took it out of the stock in hand.

Warren chafed under the arrangement for a time but finally settled to the inevitable and eventually enjoyed himself more than he did under the old way.

We hope the boys and girls of the INGLENOOK, old and young, will find out how many bushels Warren had to deliver to the smith, and give us the result. You will probably be no little surprised. Try it.

THE TEACHER'S WORK.

It is a work of charity, and charity is the work of heaven—nay, it is the highest and noblest charity, for he that teacheth another gives alms to his soul; he clothes the nakedness of his understanding, and re-

lieves the wants of his impoverished reason. He indeed who governs well, leads the blind, but he that teaches, gives his eyes. . . . Doctrine is that which must prepare men for discipline; and men never go so cheerfully as when they see where they go.—*R. South, Sermons.*

A FEW DON'TS FOR THE PERSON WITH A GUN.

H. D. MICHAEL.

1. Don't allow yourself to become careless.
2. Don't shoot until you are sure what you are shooting.
3. Don't shoot before first looking to see that no person or stock is in range.
4. Don't clean a gun while it is loaded.
5. Don't take hold of the muzzle of a gun.
6. Don't put your hand on the muzzle of the gun or set the muzzle on your foot.
7. Don't shoot at every bird you see. Many are on ladies' (?) hats.
8. Don't shoot at everything you see flying. Might injure an aeroplane.
9. Don't shoot wherever you see the brush shake. It might be stock.
10. Don't shoot wherever you hear a noise. A man makes more noise in the brush than either a deer, bear or panther.
11. Don't become discouraged if you miss getting some game by being careful. Better miss the game than kill a friend.
12. Don't carry a "hammer" gun cocked or a hammerless with the slide or roll other than on "safe," even when you expect game. Time enough after you see it.
13. Don't carry a "hammer" gun with the hammer down on the firing pin when it is loaded. Keep the hammer on the safety notch. It is far safer.
14. Don't point the gun toward a person or any animate object. It might accidentally discharge.
15. Don't carry a gun with a cartridge in the chamber until where the game is likely to be found. Many do not then.
16. Don't snap the hammer of an empty gun. It is usually the gun *some one* is *positive* is empty that kills people. Besides, snapping is not good for the gun.
17. Don't think you are the exception that can ignore all cautions and still never have an accident. There is always a first time.
18. Don't think that I fail to watch a person the first hunt or two they are with me.

"How can liquor be good for the town when it is not good for a single person in the town?"

NATURE STUDIES

OUR MUSHROOMS.

M. E. S. CHARLES.

SINCE the time of the Greeks and Romans, mushrooms have been held in high esteem as food by some persons. Juvenal tells us of an old Roman, who in his enthusiasm was led to exclaim, "Keep your corn, O Libya, unyoke your oxen, provided only you send us mushrooms."

But among the greater number of people these little plants that grow at our very doorsteps and help to beautify our fields and woods, are but little understood. Many believe that the study of mushrooms can only be pursued by a skilled scientist. Others think them so poisonous that it would be almost suicide to touch them. As well discard the potato and tomato from our bills of fare because some members of the potato family are deadly poisons. Botanists who have given much time to the study of these plants claim that a comparatively few of our mushrooms are poisonous and that most of them are edible.

Chemical analysis of mushrooms shows a high per cent of nitrogenous material and this has been taken as an indication that their nutritive value is very great. But the latest investigations show that this is not necessarily the case. But even if the mushrooms prove practically valueless as food, their eatable qualities will always create a demand for them, and their value as a condiment will hardly be overestimated. And above all things, any investigation that puts within our grasp the keys of nature, which will help to unlock the secrets and solve her problems, must be counted worthy of consideration.

The different kinds present such varying characteristics that the investigation of these fungi possesses great interest for the student who once begins the study of them.

The common *morchella esculenta* is found growing around walnut and elm stumps, piles of cinders and ashes, and is the most highly-prized of all edible fungi. Its elongated, sponge-like cap causes it to be easily identified. The *lycoperdon* or puffball is edible as long as it is white on the inside. There are several species of puffball, so called from its shape and from puffing out its dark brown spores when the plant is mature. This class varies in size from that of a small button to more than three feet in circumference. The

one shown in the illustration was found in the summer of 1904 growing by an old barn, and measured forty-five inches in circumference.

Coprinus micacens is an edible species very common in lawns and about dead stumps. This plant may be recognized by its tawny cap and the minute glistening scales on the surface. The orange-capped *amanita* is a poisonous variety very commonly found during the summer months, often intruding itself upon the grounds of good varieties thereby causing trouble for the careless mushroom hunter.

The phosphorescent mushroom always attracts attention. Its color is a deep yellow, and it grows in

Lycoperdon Giganteum, or Puffball, Which Measured 40 Inches in Circumference.

bunches from the ground beside stumps and trees. While beautiful by daylight its beauty is greatly enhanced by darkness. A. M. Longnecker, a mushroom student, tells of one of this variety found by himself which, upon being taken into a dark room, emitted enough light to enable him to read a book by its light. It is one of the ghosts seen by superstitious people on dark nights, and harmless as ghosts usually are. It also generates heat; for when a thermometer is placed in the center of a cluster of the plants, a rise of several degrees is indicated on the scale; or the heat from it can be felt by passing the hand over a bunch. The only unpleasant thing about this wonder of nature is that it is slightly poisonous.

These are but a few of the almost innumerable kinds of mushrooms found growing from the equator to the

poles. There is hardly a place upon our earth that is without some form of mushroom; lawns, gardens, fields, forests, on trees, stumps, decayed wood, rocks, decayed leaves, cellars—all are their camping grounds. Yet each of the above named places furnishes its own peculiar conditions for some modification of these little plants. Some have a white color pervading the whole plant; others are wholly red, yellow, blue, amethyst, vermilion, cinnamon-color or salmon hued, and it requires an expert in color to name every shade presented by the different forms.

A mushroom reproduces itself by spores. These develop into thread-like tubes containing protoplasm. This growth is called mycelium, and corresponds to the root system of the higher plants. Certain wood-boring beetles plant in the finely ground wood, with the newly deposited eggs, mycelium of fleshy fungi which develops when the larvæ appear, and furnishes food for their growth. Some ants maintain a fungus garden for their own use, and when a nest is disturbed it is as much a duty to preserve bits of mycelium for a new planting as it is to care for the eggs.

The wondrous hand of divine nature pervades even these plants, and they should receive some attention from us when we are roaming over nature's wonderful field.

A BIRD THAT DECEIVES THE BEE.

ALL members of the insect world, however tiny, possess strongly the instinct of self-preservation, which is generally considered to be the "first law of nature." Now, the quiet, honest, industrious little honeybee has this instinct probably as largely developed as almost any other known winged insect. Not only is the bee always on the alert for danger, looking out sharply for its individual safety, but it is very quick to resent any attack or even approach to familiarity. However, the bee may be the unconscious victim of deception; in fact, no doubt is.

Down in Mexico there is a bird which is sharp enough to deceive even the honeybee. Speaking of this bird, a gentleman who has spent many years traveling in Mexico, said to the writer: "There is down in Mexico, particularly in the southern part, a peculiar little bird that is the constant and natural enemy of not only the domestic honeybee but of all kinds of wild bees. This bird lives entirely by deceiving these little insects. It is of very striking, brilliant plumage. The bird by ruffling up its various-colored feathers may be mistaken readily for a large tropical flower. In fact, all the honey-seeking insects do readily mistake the bird for a flower, and generally make a straight line for it. No sooner does the unsuspecting insect come within easy reach than, quick as a flash, it is snapped up by the bird. It remains perfectly still until the bee approaches near enough to be seized. I have very often watched this cunning little feathered deceiver

thus earning its livelihood. I do not recall now that the bird ever failed to capture the victim. If bees do have a language among themselves, they have no opportunity to inform and warn their kindred and friends of this destructive deceiver, as very few, if any, ever escape to tell the story."

These birds are very different from the common little bee martin on the Pacific Coast. These latter birds have a very plain plumage, and could not be mistaken for a flower. When they are hungry, they simply swoop down on a bee without any attempt to deceive the insect, but often the bee makes good its escape.—*Selected.*

EDELWEISS OF SWITZERLAND.

THIS year, as usual, there are reports of accidents to tourists in several different parts of Switzerland, due to attempts to gather edelweiss. Thus the legend about the flower persists and grows, the *London Times* says, though it is as false as the legends that once made the mandrake a famous and dreaded plant. So far from being a flower that grows only in high, inaccessible places, the edelweiss is not even typically Alpine. The highest Alpine plants—such as the *Eritrichium nanum* and some of the *Androsaces*—are as dwarf and compact as any moss, both in leafage and in flower. There is nothing superfluous about them. Conditions that would be quickly fatal to the most robust weed of the lowlands have made them both brilliant and minute, and in these conditions alone will they thrive.

The edelweiss is not a large plant, but it is neither minute nor brilliant. Indeed, many of our common English wild flowers look more like high Alpine plants than it does, and many have much more beauty. But it is very unlike most other flowers. It looks, indeed, as if it were a rather clumsy imitation of a flower made of some woolly material; and it probably owes its fame to this artificial look and to the fact that, like its close relation, the antenarria, it is an "everlasting." But it is an everlasting just because it has so little fresh beauty to wither. It is like those persons who never look neither young nor old, because they do not seem to be made of flesh and blood.

The botanist describes it as having flowers surrounded by "a whorl of long densely tomentose bracts"; and these bracts, which some one in the first bitterness of disappointment has described as looking like bad cigar ash, are the most conspicuous part of the plant. Although so eagerly sought after, the edelweiss is still fairly common in Switzerland, particularly south of the Rhone valley, and it is often found growing in places that could be reached by an invalid in a bath chair. But perhaps the legend about it is so potent that tourists will only recognize it when they see it growing in dangerous places. Then, no doubt, they rush after it wildly, and hence the accidents which it causes.—*Chicago Daily News.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE reward which the true and faithful laborer most desires and that which he is most sure of receiving is strength and ability for greater labor.

THE strongest argument we can put up in favor of certain principles is expressed by our embracing them ourselves—living them out in everyday life.

ALMOST every day we are surprised anew by some event that shows us how truth survives all the attacks made upon it. And yet we should not be surprised. If we always kept in mind its unconquerable, undying nature perhaps we would stand more firmly as its uncompromising adherents.

MANY people mistake levity for cheerfulness and good humor. As a result serious-minded people are led to question their sincerity and profession as Christians and light-minded people are led to look upon life as a joke and to consider foolish jesting as a part of one's religion.

DESIRE for leadership often secures to men positions as leaders instead of the real gift of leadership which should control such positions. This explains why movements, worthy in themselves and much needed, sometimes come to naught and confidence in their worth is destroyed. The born leader is made over the old pattern which makes one known by his fruits.

WE are glad to publish the list of don'ts for the hunter sent in by one of our contributors who has a fair reputation as a follower of Nimrod. Whether one is a hunter or not—and there is little call for one being a hunter in most of our States—he should use extreme care in handling firearms.

NEEDED REFORMS.

THE National Purity congress which held a three-days' session, Oct. 19, 20, 21, at Burlington, Iowa, discussed many important subjects looking to improvement in the social and the business world. This congress is made up of earnest men and women who are in the foremost ranks of workers that are laboring to lift humanity to a higher plane of living. While the organization is not a legislative one, it does much toward enforcing laws already passed and toward molding sentiment for the passage of other needed legislation. Following are some sentiments expressed by various speakers during the meeting:

In a preliminary meeting, Oct. 18, Mrs. Mary Teals of Chicago assailed the newspapers in all the large cities as having opened their columns to the filth of the world, while the sweetness and light that flowed from the better avenues of life were refused admission except in homeopathic doses.

"Mrs. Teals also rapped the parents, stating in emphatic tones that not until the fathers and mothers were improved could the red-light districts be wiped out. An educated parenthood is needed, she declared, and until the citizens are educated in schools that pay more attention to morals and less to impractical tomfoolery there will be serious obstacles in the way of right development of the children."

On the first day of the congress Speaker Cannon in particular and the National Congress in general came in for a good deal of ridicule and censure because of their change of front on certain reform questions because of pressure from certain districts. The speaker declared, however, that even Speaker Cannon was amenable to pressure by the forces of right. During this session it was voted to change the name of the organization to that of American Purity Federation. The first day's session closed with an address at the night meeting by Clifford G. Roe of Chicago, formerly assistant state's attorney of Cook County. His subject was the white slave traffic. He declared that the ignorance of many girls of the things they ought to know about themselves and the carelessness of parents were two things that aided the traffic. "Fathers," he said, "take more care of their horses, their sheep and their cows than they do of their daughters." He also "charged the low wages paid the girls in the big city stores as being the cause of many girls' downfall and said that it is impossible for girls to live on some of the wages paid and they choose the easier way."

After Mr. Roe's address the following resolutions were adopted:

"The National Purity Congress in session at Burlington, Iowa, hereby records its great gratification at the present activity of national and State authorities against the loathsome, terrible commerce in girls known as the white slave traffic.

"We urge upon all citizens of the nation, especially upon the officers of the government, sworn protectors of the people, to take necessary measures to end the traffic in girls, the worst disgrace to civilization."

The second day of the congress witnessed a number of interesting discussions, some of them almost revolutionary in thought. Arthur Burrage Farwell, president of the Chicago Law and Order League, speaking on law enforcement declared that "if the officials and legal powers of Chicago did not enforce the laws, and if the State did not compel these officials to do so, then the national government should step in and perform the office. 'Until we get nearer to the millennium,' declared Mr. Farwell, 'my judgment is that the State should not lose control of the cities, but should see to it that the law is enforced.'

"I believe in home rule if home rule will make for the best interests of the people, but if home rule in a big city means defiance of law, tolerance of vice, the prostitution of the ballot box, the degradation of the people, then I believe in the rule of the State or of the Nation.

"The great interests of a city and of the State and of the Nation are not farms, business houses, factories and railroads, but the spiritual and moral and physical welfare of the people."

Discussing the social evil in general one speaker said it "was the product of ignorance, and that publicity and education were the essential instruments with which to combat it." This expresses in brief the position of the organization and it is along these lines that it hopes to bring about needed reforms.

THE GRADUATE—THE POEM OF THE "BOY MOVEMENT."

The street was his school, and the corner his college—
What wonder he picked up a great deal of knowledge?
The faces of women and men were his books—
What wonder he trusted so little to looks?
Each person he met was unknowing his teacher—
The pugilist taught him as much as the preacher;
This outcast in rags, and that other in satin,
Each gave him a lesson more lasting than Latin!

The street was his school—ay, its lessons were burned
Deep into his sensitive soul, for he learned
Some things that the wisest of books do not tell,
Some secrets that erewhile were whispered in hell!

In halls academic a boy may omit
His lessons some day when he's not feeling fit;
There are periods of rest, there are days of vacation,
For e'en the most zealous require recreation,
Not so with this college—'tis always in session,
With teachers absorbed in their occult profession,
And course so alluring that those who've begun it
Have little desire to abridge it or shun it.

The street was his school; and through sound and
through sight
It poured in its lessons by day and by night.
Its method could scarce be described as elective,

But then, what of that? It was highly effective.
It took him an infant, an innocent baby,
Whose mother had holy desires for him, maybe,
And, class after class, led him onward, until,
A Beast that is trained but to capture and kill,
Through lesser achievements he passed till he stood
Accused at the last of the shedding of blood.
And then came his college, as proud as could be,
And gave him, cum laude, its final degree!

The street was his school and the corner his college—
And shall we blame him for applying the knowledge
So fully and freely provided him there
To land him at last in the murderer's chair?
Are we, who have never attended, as he,
The school of the street and the corner, are we
So free from reproach for his life gone amiss,
The light of his innocence darkened like this?
Are we in no way in his failure involved?
Are we from all blame for his downfall absolved?
Ah, never believe it! We all are to blame;
On all rests a share of his shadow of shame;
For, lost in pursuit of our gains and our joys
We've wandered away from the girls and the boys.
And though we spend millions of dollars in schools
And muddle our minds over methods and rules,
There's something essential overlooked or forgotten,
Some arch in the structure we're building is rotten.
Else, why should we find it so hard to compete
With those who are running the school of the street?

And why should we stand in so helpless a way,
Beholding it capture our best day by day,
And draw them away from the things we revere,
Until in the end, like this graduate here,
They come to that seat which our science invented
For crimes which our schools should, perhaps, have prevented?

—Denis A. McCarthy, in *Journal of Education*.

A SIMPLER LIFE.

If we will, we can live comfortably, happily, rationally and nobly, and yet do without many things pleasing to the senses. We are always in danger of multiplying our wants. By so doing we endanger the higher life. If we live too much on things material, we starve the spirit. As Jesus says, a man's life does not consist in the abundance of the things he possesses. Our present danger in the family, in society, everywhere, even in the church, is that we forget this elementary rule. We want the things that cost money. If we stop just for a moment we will realize that today most of our troubles are economic. How shall the things of this world be evenly distributed? And now whilst we are in favor of every man having a square deal, in favor of a just distribution of the things of this world; yet of one thing we are persuaded, and that is that we would serve ourselves and the church greatly if we would by choice, by effort, by struggle if necessary, live a simpler life as far as material things are concerned. Let us seek our true gratification in higher thoughts, nobler ideals, in truth, kindness, service, righteousness and love—in living to the spirit.—*Selected*.

THE HOME WORLD

THE MOST PREVALENT MALADY

DOCTOR O. H. YEREMAN

THROUGH the extensive advertisements scattered broadcast throughout the land in circulars, newspapers and periodicals of all kinds, catarrh has come to be a household word. From earliest youth we begin to hear it. On every side, by sign and billboard, we see it emblazoned on buildings and fences; and unconsciously it sinks into our souls that catarrh is the inevitable, that almost everybody has it, and that *almost* is very liable to include us some day.

And yet in spite of this general publicity which catarrh has received, very few people understand what it is, or can define and give a lucid explanation of it. And the public is not to blame for this, as the doctors have never taken the time to explain the true nature of this malady.

A certain individual develops a sore throat. It hangs on a while; it disappears and reappears, and finally tormented with it he goes to his family physician. The doctor asks him a few questions, makes an inspection of his vocal organs, and with all solemnity pronounces it a case of *catarrh*.

Another man has uneasiness, the feeling of a dragging weight and heaviness in the region of his stomach. He bloats and he belches; his breath gets offensive and his taste becomes as bitter as gall. He yawns and he stretches, he frets and he fusses and finally goes to his doctor. This man's case is also pronounced *catarrh* (of the stomach).

A third man is seized with intense agony and excruciating pain on his right side. He doubles up and he squirms, he screams and he groans. Hot cloths and bottles, painkillers and cordials give no relief, and the medico is sent for posthaste. Syringes and hypodermics, morphine and hypnotics finally quiet the sufferer. As soon as he can get his breath, the man wants to know what ferocious microbe or dreaded anophele it is that so unceremoniously disturbed his peace; and he gets his doctor's dictum—"gallstones" due to *catarrh* of the biliary ducts."

A fourth one coughs and spits, he clears his throat

and he wheezes; he sheds tears and he sneezes, and all the consolation he gets is that he is another victim of *catarrh*.

What is catarrh?

The present usage of the term signifies a certain type of inflammation of a mucous membrane.

And what is a mucous membrane?

The lining membranes of the various orifices and cavities of the body; such as the lips, mouth, nose, eyes, stomach, and so forth.

Hence, we may have catarrh of the nose, the throat, the eyes, the stomach, bowels, lungs, urinary bladder, etc., etc. But this was not the original usage of the term. Some years ago the word was used to designate an inflammation of the lining membrane of the nose and throat. A simple cold in the head was an acute form of catarrh, but as it was looked upon as a trivial malady the term catarrh was reserved for the graver and more troublesome chronic form of inflammation of these tissues. And right here is the critical point. These little innocent colds are the beginning of the stubborn disease called catarrh. *If persons were to vigorously treat their colds and bring them to a speedy termination, we would not have so many cases of chronic catarrh.*

Restricting ourselves to catarrh of the nose and throat, we find that when an individual contracts a cold, the membranes and tissues of these cavities become red, puffy and swollen, interfering with respiration and producing a disagreeable fullness of the head. There is generally a feverish, restless feeling, and in a short while the second stage of the disease is ushered in by a profuse discharge of watery secretions from both nose and eyes, necessitating the frequent use of the handkerchief. The next stage is where the discharge becomes thick and yellow in color, and ends by the formation of crusts and scabs within the nostrils. As a result of this process, the membranes of the nasal cavity become thickened, and each succeeding attack increases this thickening until there result fibrous and

bony enlargements, which protruding into the channels for the passage of air, are constantly irritated by each act of respiration and produce the thick, sticky, tenacious secretion in the back part of the nose, which causes the individual to hawk and scrape in an effort to clear the throat. These are the so-called "droppings" into the throat which catarrh sufferers complain of.

In some cases this constant irritation affects the nervous system, and all kinds of reflex symptoms result; such as nervousness, headache, hysteria and so forth. A few days ago a physician writing to the *Journal of the American Medical Association* reported a case of genital trouble which was completely cured by the removal of one of these irritating enlargements in the nose.

A further stage in the development of catarrh is what is known as the *atrophic* or decaying stage. In this the tissues of the nose, drained of their vitality, completely succumb to the ravages of the disease. Deep ulcers are formed which destroy large areas and produce a foul-smelling, thick, greenish yellow discharge. Finally there is a shrivelling and shrinking of the tissues; large scabs form, and the sense of smell is obliterated because of the destruction of the nerve terminals. These scabs are so large that often a cast of the entire nasal cavity is brought out in one piece. This form of catarrh is called *ozena*, and its most characteristic feature is the offensive smell which emanates from the nose. Frequently this is so foul that the individual can not go out in society, even the patient's kin avoiding a close approach to him.

The prevalence of catarrh has appealed to the mercenary, and many are the cures, patent medicines and nostrums exploited upon the public. So lucrative are the returns from this business that many an advertiser grows bold and offers a cash prize for every case of catarrh his nostrum will not cure. The unsuspecting public is thus encouraged to spend more and more of its dollars in these cures, not being able to see the "catch" in these promises. The relief of local manifestations, which they call a cure, is not difficult to obtain, but to stay cured, or keep the trouble from returning with each cold is the difficult problem. And here it is that the victim is deceived. The amelioration of the local symptoms is pronounced a cure, and the testimonial declaring the sensational cure obtained at this time. The next cold brings to light the dormant symptoms and in a few months the disease is making its inroads upon the tissues as much as ever.

All specialists accept the fact that the systemic treatment of catarrhal diseases is equally as important, if not more important, than the local treatment. The patient invariably suffers from some derangement of the system which causes a poisoning of the blood and an irritation of the tissues of the diseased catarrhal areas. This systemic derangement may be of different

character and different location. With some it may be a derangement of digestion in the stomach, others may have intestinal, kidney, nervous and various other troubles. Unless these associated causative derangements are relieved, it is almost impossible to radically cure the catarrhal trouble.

Where there are enlargements or new growths in the nose or throat, they usually require electrical or surgical interference. Just recently I operated on a patient who had been suffering with hay fever for years, having tried all kinds of patent remedies with no effect. I found an enlargement of the turbinate bodies of the nose, which with the least irritation would come together and obstruct the nasal passages, bringing on the distressing attacks. The excision of these obstructing bodies removed the cause, and complete cessation of the attacks has been the result.

Another case illustrates the relief of nervous and asthmatic phenomena, being relieved by the removal of the cause. A few months ago I was called to the extreme southern part of this State to see a girl of eleven summers, who was being awakened from her sleep during the night with attacks of shortness of breath, choking, asthmatic and nervous seizures. There was a catarrhal condition of the nose and throat, with the characteristic "droppings" in the throat; but the cause of it all was an exuberant enlargement of some glands in the arch of the throat, causing this discharge, the obstruction to respiration and the troublesome nervous symptoms. This little patient did not require any other treatment than the removal of these obstructing bodies, and she was well. I have cited these cases to impress the necessity of consulting a physician making a specialty of these organs, to discover what is causing the symptoms, so that the treatment can be directed against the particular cause. I would not have you think, however, that all cases require operative interference, for many of them need nothing more than the medicinal treatment.

These facts bring us to the conclusion that a cold in the head being the starting point of the various catarrhal affections of this region, it is important that we get away from the notion that it is a trivial thing. Every cold should be immediately and vigorously treated. A simple, yet effective, treatment is the following: Take a brisk cathartic, abstain from food for twenty-four hours, and exercise vigorously (preferably in the open air) to induce perspiration. Use a menthol inhaler or bottle of smelling salts to open the nasal passages and overcome the stuffy feeling. These measures will be found efficient in the majority of ordinary colds. But if the symptoms are not relieved within twenty-four to thirty-six hours, a physician should be consulted. In heavy colds, or where there are complications of throat or ear trouble, always consult a specialist, if it is at all possible to reach one.

INTERRUPTIONS.

If there is one minor virtue which I covet, above all others, it is superiority to interruptions. I don't mean the kind of superiority that goes calmly on with original and engrossing occupations while the door bell is ringing, the roast burning or somebody is asking a bit of assistance.

What I do covet is the ability to stop instantly and pleasantly, do what seems necessary, and then take up the task which I left, without losing five minutes more in concentrating my mind and another five in regaining my serenity. The longer I live the more deeply I am impressed with the desirability of this. I have known just one person who seemed ideal in this respect, and he—I regret for the sake of my sex to admit it—was a man. Yet, although he stands preëminent, I believe that the women average better than the men.

The thing that has aroused me to my present enthusiasm on the subject is a recent renewal of acquaintance with our colonial authors, and especially with Anne Bradstreet. Just think for a moment of what she did: delicately reared in England, never at all robust, married at sixteen and brought to this country to endure the hardships of a pioneer's wife, becoming the mother of eight children, and yet, with all these excuses for literary inactivity, writing enough to fill a four-hundred-page royal octavo volume. And this was nearly all done before she was thirty! Isn't that enough to make a modern scribbler feel humble? And should I not blush when I remember being exasperated with a crayon-portrait canvasser last week, and with the butter-and-eggs man day before yesterday.

Most of us are as trying as children are, when they are called upon to lend a hand and pause to finish a chapter before coming, or else lay down the book with an evident reluctance that robs the favor granted of all its graciousness. It does seem as though we might be able to conquer this before the cares of life come so thick and fast upon us that all planning and ambition is lost in the breathlessness and it is *all* hindrances. We might just as well make up our minds to the fact that we shall be interrupted all our lives; that is, we shall be unless we deliberately make ourselves so disagreeable that nobody wants to come near enough to interrupt. Exasperations can become a means of grace as well as anything else, I suppose. The trouble is that in character-building we are looking for the hewn blocks of great trials, and we kick impatiently out of our path the rubble that obstructs the way.

Some of these unexpected happenings might have been foreseen and prevented, doubtless, if we had been shrewd enough and not attempted to concentrate our minds and labors on any favorite occupation until the other things had been thoroughly looked after and possible emergencies provided against. As for the rest, it is wonderful what calm determination can do in

the way of keeping a steady purpose and an unruffled temper. Not every train can be a through express. Mixed freights and accommodations do an indispensable work, but they would never keep up with the schedule if the engineer were permitted to dally a few minutes at interesting stations after the necessary transfers of passengers and luggage had taken place and the alert conductor had signaled that all was ready to go ahead. We may have to stop very often, but we must stay on the track and keep steam up, making the delays as short as possible, and then reaching the destination is only a question of time.—*The Advance*.

IDLE CLASS PARASITES.

POVERTY is often the most powerful incentive to action: it frequently acts as a stimulant to endeavor. Many of our greatest divines, lawyers, doctors, and other professionals worked their way through college. Some of the boys sent by the Children's Aid Society have become governors of States and leading factors in the social, commercial, and political life of their centers of industry.

It often turns out that the by-products thrown aside as refuse become the most valuable ingredients in the outputs. The poverty of the poor is apt to sharpen their wits, while its experience gives them endurance to withstand the trials they have to face, and surmount and conquer them.

The real danger of society does not come from the rich or poor as a class but from the degradation of manhood in all classes. It is the idle class that the world has to fear the most, those who neither toil nor spin, the drones of society, who become parasites on the body politic and suck the blood from its veins.

These are recruited from both the wealthy and poor classes, though the greatest number of these undesirables spring from the former. Work in any form is abhorrent to them; they exhaust their ingenuity to devise means and schemes to avoid honest endeavor. They try to levy tribute from every one and care not whose sweat and brain contribute to their support so long as they can live in idleness and indulge their inclinations.

Franklin says: "An idle brain is the devil's workshop," and again that "the devil always finds some of his own especial work for idle hands to perform." Hence it is that most of the crimes and infamies which shame and disgrace the country are committed by loafers. They fill the jails and increase the taxes, so that whether free or confined they are a burden to the race.—*Chicago Tribune*.

APPLE STUFFED WITH OATMEAL.

THIS is the most delicious breakfast dish imaginable. Prepare oatmeal as usual the day before using. Pare and core, making large cavities in center of five large

apples and cook in a liquid made of one quart of water and one and one-third cups of sugar; add a strip of orange peel. Turn apples frequently to cook evenly. When done lift onto a platter and fill the cavities with oatmeal. Boil down the sugar and water until it is the consistency of sirup and pour over the filled apples, or serve with sugar and cream.—*Record-Herald*.

BAKED APPLES WITH RICE.

SELECT large, perfect apples. Core carefully, sprinkle with sugar and grated nutmeg, and fill each cavity with cold boiled rice; place in a tightly covered stone or enamel baking-dish. Cover with a syrup made from one cup of sugar and a half cup of water, one teaspoonful of butter and a little grated lemon-rind. Cover closely and bake slowly for one hour. Serve hot or cold with any preferred dressing.—*Selected*.

A DELICACY.

AN egg poached in scalded milk is greatly improved in flavor and the hot milk can then be poured over the toasted bread. Scald the milk in a double boiler and add salt, butter and pepper, if desired. This makes an excellent breakfast dish for an invalid.

TO CURE A COUGH.

A HACKING cough is quickly relieved if a single drop of oil of tar is placed on a piece of lump sugar and eaten slowly. This also gives relief to persons with an incurable cough.

The Children's Corner

WHAT SHALL THE HARVEST BE?

SOME small boys were playing behind the big barn on Mr. Thompson's farm, and sad to tell, they were using bad language; also two or three were trying to smoke cigarettes. Now, it so chanced that Mr. Thompson himself was in the barn at that time, busy over the repairs needed by some of the farm implements, and, shocked by hearing such words, accompanied by the smell of tobacco smoke, he looked out cautiously to see what boys were so misconducting themselves. Imagine his grief at seeing his own son Willie, with a cigarette between his teeth! And, alas! just as his father's eye fell on him the filthy roll of paper and stale tobacco was removed from the boy's lips, while he used some of those very words which had so shocked Mr. Thompson.

Grieved beyond measure, the loving father resolved upon teaching his son a lesson which he should never forget. Early upon the following morning he called Willie downstairs to prepare for a day's work in the field.

"We will plant the corn lot today, my son. Come with me and I will show you what seed to use."

To the boy's surprise, Mr. Thompson led the way to a field overgrown with burdocks and thistles and began filling his sack with the seeds there accumulated. When the bag was full, he gave it to his son, and proceeded to fill another for himself; this done, they took up their hoes and passed on to the corn field. When the rows were ready for the seed, Willie said:

"Shall I run back to the house, father, and get some corn to plant?"

"Certainly not, my son; we have plenty of seed here in these sacks."

And forthwith he proceeded to drop the vile seeds in the ground he had so carefully separated. Seeing Willie struck dumb with amazement, he asked:

"Why are you not planting? You have an abundance of seed."

"But, father, you surely don't think corn will come up if you plant thistles and burdock?"

"No, I don't think so, but you seem to be of a different opinion, and I thought I would try your way just for once, to see how it would work."

More astonished and mystified than ever, Willie said:

"But, father, I never helped you to plant before! I don't see how I could have a 'different opinion' or 'why.'"

"My son, I was in the barn yesterday when you and your friends were playing behind it, and I saw you planting the seeds of bad habits—seeds which cannot fail of yielding a large crop one of these fine days."

Willie hid his face behind his hands while his father talked kindly and earnestly concerning the harvest he must expect to reap by-and-by.

"Could I suppose you intended seriously to sow seeds of a bad character? No; I must infer that you expect to gather in a harvest of good things sown from the seeds of evil you were sowing, hence I am following your example. Now, my boy, let this thought sink deeply into your heart today; when you may reasonably hope to reap a crop of corn or wheat from seed such as this, then, not till then—may you expect to reap the harvest of a good character, an honored name, from the seed you were sowing yesterday—bad language and the use of vile tobacco. If you wish to be a good man you must be a good boy, for, 'Whatsoever a man soweth, that shall he also reap.'"

"Indeed, I won't sow any more rubbish seed, father; but the other boys were all talking slang, and some were smoking."

"Well, my son, whenever you start out to plant any kind of habit seed, just stop and ask yourself, 'what shall the harvest be? Wheat for the Master's garner, or tales for Satan?' You will be safe then. Now let us go back for some corn."—*Exchange*.

THE QUIET HOUR

HUNGERING AND THIRSTING.

D. D. THOMAS.

Dank mist envelops in the way
 When we had wished a sunny path,
 Is making dark the light of day
 Betears as on the aftermath;—
 The golden coronet we love
 Is held beyond our reach above.
 The earthly beautiful may fan
 The shaded dewdrops from the bough,
 And cheer the feathered warbling clan;
 Their song would barely soothe us now
 The golden coronet we love
 Oh, yes, 'tis held so far above.

The precious incense rises high
 Above the secret chamber fire.
 The soothing seraphs seem so nigh
 That pleading mortals never tire.
 The golden coronet we love
 Is held, is held so far above.

We leaf the pages of the Book
 From which the lights of heaven gleam.
 How many gems we overlook
 The pang of weakness may redeem.
 The golden coronet we love,
 The angel holds so far above.

The darkness is of timid sense,
 It leaves the pathway as we rise,
 Betears with dewdrops of penitence,
 A path of glory to the skies.
 The golden coronet above
 Is held aloft that we might love.

Lafayette, Ohio.

"GOOD WORKS."

EDGAR R. HARRIS.

MEN tell what they are by what they do. If we see fruit growing upon a tree, we know what tree it is upon which such fruit grows. And so if we see what man does, we know what he is or believes. If his belief or faith be good, his works cannot but be good too; and if his works be bad, his faith cannot but be bad. If you light a lamp the outside of the globe will get as hot as the inside. So, when the Gospel gets into a man's heart, the life will soon show that it's there.

We can easily see, therefore, that a true or living faith does not live alone. It takes to it good works, and they twain are one; and from them spring all the acts of devotion to God which Christians set forth in their lives. A living, saving faith is always accom-

panied by good works, and good works, such as are acceptable to God, are accompanied by a living faith. We see, therefore, that the quality of the works we do depends upon the motive that prompts us to do them. The motive gives character to the works. The moral quality of works resides in the motive which prompts one to do the works, and not in the external act. Faith or motive is seen by God only, and it is made known to man by visible acts or works. We are justified before God when he sees our faith and the motive that prompts us; we are justified before men when they see our works.

What are good works? It is much to the honor of God when his children are not only good, but do good, and "abound" in good works. Good works, then, are the result of being and doing good.

Can a boy or a girl do good works? Did Jesus do good works when a boy? Yes. While at the age of twelve his parents took him up to Jerusalem "after the custom of the feast. And when they had fulfilled the days, as they returned, the child Jesus tarried behind in Jerusalem; and Joseph and his mother knew not of it. And it came to pass, that after three days they found him in the temple, sitting in the midst of the doctors, both hearing them, and asking them questions. And his mother said unto him, Son, why hast thou thus dealt with us? behold, thy father and I have sought thee sorrowing. And he said unto them, How is it that ye sought me? Wist ye not that I must be about my Father's business?"

Oh, that there were more boys and girls that would be about their Father's business. How pleasing to God it is to see children while young working for him. Jesus went about doing good. His words and works signified one and the same thing.

To become "rich in good works," means more than to do one good act and then keep talking about it. "Do good unto all men."

A saving faith works by love. It is this that makes work gladsome service. If a man believes in Christ to the saving of his soul, he receives the love of God shed abroad in his heart. Now, he voluntarily finds cheerful expression for his love in the form of good works. He proves that his heart has been renewed by his good works and brotherly care of those about him. No wonder we are exhorted to "put on" and "abound in" good works, until it may be said we are "rich in

good works, ready to distribute, willing to communicate," and so become "a pattern of good works."

It is in this way that each Christian worker may be "a doer" of God's work, an "example of the believers," a blessing to the unsaved, and bring praise and glory to the name of God.

Norwich, Kansas.

BUT ONE THING NEEDFUL.

"You must have looked about you enough to have discovered what is the particular curse of this day—it is affairs. We—Americans especially—are slaves to the liquor activity as truly as a drunkard is a slave to wine. We must be *doing* and *driving* our tired *bodies* from *breakfast* to *business*, and from *business* to a *meeting* or two, and late home again to bed. With a perfect mania for organization we meet each new demand, not with an attempt to adapt the machinery which we already have to our purpose, but with a new machine. Even our religion is systematized and organized until the juice is almost squeezed out of it, and the church worker, who ought to be a distributing agent of sunshine and cheer, is too often warped and twisted into an irritable holder of presidencies and secretaryships and superintendencies. Loving hearts are thrown underneath the boilers of the creaking, groaning organization, and lives which yearn to serve are worn out in the fruitless effort to make the wheels go round.

"You must have felt this condition, even if you haven't analyzed it, and you would have known the remedy had you studied your Bible as faithfully in these last years as you did in the days before you became such a successful man. Jesus Christ, who came to earth to take the biggest job, whose work, when he laid it down, was taken up by some millions of men who, altogether, are falling far short of doing it as well as he did—he had an excuse for being overburdened, if ever man had. He was a million man-power Man. Yet he was never overworked. There was never a moment in his life so full, never a duty so important that he could not turn aside to bless a little child, or speak comfortingly to a sorrowing one. In those last days which were packed so full of apprehension and sorrow for him, there was still time to heal the sick and lighten the burdens of the poor. Jesus Christ, who carried the world upon his shoulders and mankind upon his heart, was never in a hurry; never petulant, never too busy or too tired.

"If he had patented the secret of his success and charged his disciples never to divulge it to the world, we should consider that knowledge the most precious in the world, and should make long pilgrimages to Jerusalem in the hope of finding some scrap which should tell us how Christ managed to live such a life. But he has written the whole formula out for us and given it free of charge, and having it for nothing like

the sunlight and the air, we consider it of little importance. He lived out the advice that he gave to Mary to whom he said, 'But one thing is needful.' He meant it; why don't you prove to yourself that he did? But one thing is needful. With the first great choice made, the others arrange themselves for us, in a most charmingly easy and natural way. The feeling of rush and hurry is lost; it seems as though God put into each day just the things that could be comfortably accomplished for him; and wound up each one with hours of self-refreshing sleep. The narrow path does not admit of many turnings aside into the things which are non-essential. There are plenty of people to be picked up along it, plenty who have stubbed toes and broken hearts. But some way one has time for all these things when he has chosen the one thing that is needful."—*Home Herald*.

ATTEND RELIGIOUS SERVICES.

THERE is nothing that can take the place of a religious meeting as a means of refreshing both body and soul. Some people who work hard during the week imagine that they are too tired to attend church on Sunday. It is a woeful mistake. In that case "that tired feeling" becomes worse and worse and the soul is robbed of a spiritual feast.

John testified that he "was in the Spirit on the Lord's day," and a most glorious vision he had. So may we, if we are in the Spirit each Lord's day, have a season of refreshing each week which will help us materially and spiritually the rest of the week.

Did you ever notice that the singing at the close of an inspiring service is better than at the beginning? You cannot waken up the soul without also awakening the body. When the soul is in an ecstasy of delight the body is fast getting rid of its weariness. So it is that laziness on Sunday develops a feeling of moral and mental meanness, while an exercise of the soul in the delights of a Christian service means a reinvigorating of body, mind and spirit.

Do not miss the Sunday service. If you pity your horses, do not work them so hard during the week. If your body is too weary, be more moderate in your work. If you want a tonic which leaves no depressing after effect, you will find it in a real, heartfelt, spirit-uplifting service of praise and prayer and worship.—*Gospel Herald*.

You may take the Lord's promise for victory in the end; that shall not fail; but do not promise yourself ease in the way, for that will not hold.—*Robert Leighton*.

TRUE repentance consists in the heart being broken for sin, and broken from sin.—Thornton.

ECHOES FROM EVERYWHERE

The chief engineer of the British Post Office Department, Major Walter O'Meara, is visiting this country for the purpose of studying our telephone systems. The British government is to take charge of the entire telephone system of Great Britain in 1911. It will be operated as is the telegraph system, by the Post Office Department.

Final figures show that the total loss of life in the Messina earthquake of last year was about 76,000, making this one of the greatest disasters in the history of the world. Since the earthquake 12,000 persons have migrated to America from Sicily and 10,000 more from Calabria, the districts where the losses were heaviest.

According to the latest statistics, the total peat bogs of Sweden would be capable of producing 10,000 millions of tons of air-dried peat, suitable for fuel. This quantity, as compared with the present import of coal, would be sufficient for a period of 1,500 years. More exact examinations of the geological character of the peat bogs will soon be started by the Swedish Geological Society.

As a result of the high prices which are being demanded for American cotton, some of the Southern mills are for the first time in their history purchasing cotton grown in India. The India cotton is of shorter staple than the upland domestic cotton, but it is as white and smooth. It is predicted by the mill men that large orders will be placed.

Petitions are being gotten up asking the postoffice department to operate daily mail trains between St. Louis and Peoria over the Illinois Traction Company system. The company has formulated a tentative schedule and asked the government for a mail contract. If the plan is approved the service will be inaugurated next February or March.

By making a flight of 232 kilometers (144 miles) in 4 hours, 6 minutes and 25 seconds, at Mourmelon, France, Henry Farman, the English aviator, broke all aeroplane records for duration of flight and distance, and won the Michelin cup. The previous best record was made by Farman at Rheims last August when he won the Grand Prix de La Champagne, traveling 180 kilometers (111.78 miles) in 3 hours, 4 minutes and 56 2-5 seconds.

In his annual report, M. O. Chance, auditor of the postoffice department points out that during the last 20 years foreigners, by means of postoffice orders, have sent back to their homes \$431,956,632. More than half this enormous sum went back during the past four years. Eighty per cent of the money went to Austria, Great Britain, Hungary, Italy, Norway and Russia. Auditor Chance argues that if the United States had postal savings banks many of these millions would remain in this country.

Witnesses who have testified before the State railroad and warehouse commission in the investigation into express rates in Illinois have shown that rates charged in this State are from 20 to 30 per cent higher than those charged in any other State.

The Illinois Legislature, at its next session, will be petitioned to pass a law requiring all male applicants for marriage licenses to pass a physical examination. The petition will come from the Southern Illinois Medical Society, which ordered it drafted at their annual meeting at East St. Louis.

Robert Burns' "Poems Chiefly in the Scottish Dialect," a rare octavo, printed by John Wilson at Kilmarnock in 1786, was purchased recently at the auction sale of the private library of the late James Brown, a publisher, by George Clark of Kilmarnock, Scotland. The price paid was \$1,025. Mr. Clark, who lives in Burns' old neighborhood, will take the book to Scotland with him.

Following the resignation of James F. Smith of California as Governor General of the Philippines, the appointment is announced of W. Cameron Forbes of Massachusetts, at present the acting Governor General, as Mr. Smith's successor. The appointment takes effect November 11. Smith resigned to resume his law practice. The new governor is a grandson of Ralph Waldo Emerson.

The contract has just been let for the huge dam across the Conchos River in Mexico. This dam will form a reservoir of 1,840,000,000 cubic meters capacity. The hydro-electric plant which will obtain power from this source has a capacity of 25,000 horsepower, which will be used at a number of large mines within two hundred miles of the generating station.

In a paper read before the National Conference of Pellagra at Columbia, S. C., prepared by Dr. F. M. Sandwith of London, England, and read by Dr. J. M. Babcock, superintendent of the South Carolina hospital for the insane, the assertion is made that pellagra and hookworm travel hand-in-hand. It is argued that the scientists must fight both at the same time.

The Turkish ministry will urge upon the Ottoman Parliament soon after it reconvenes, Nov. 15, the adoption of a naval programme, providing for the expenditure within the next seven years of \$100,000,000. According to this programme, it is learned that seven battleships of the North Dakota type would be constructed, together with a number of torpedo destroyers and one hospital ship. Contributions to a public fund for the construction of a battleship are said to be pouring in by the thousands.

Nearly a year ago the Texas Legislature appropriated \$40,000 for the establishment of a leper colony. The Governor was authorized to appoint a commission to select the site. This he has failed to do, and complaints are numerous. In order to force action leading physicians have arranged to send a delegation of lepers to Austin to plead with Governor Thomas M. Campbell. There are 400 or more lepers in Texas. They can not get employment nor are they admitted to hospitals.

Beginning with the coming new year, the French people will have aluminum coins for their small change, in place of the present copper and nickel ones. Copper and nickel are rising in value while aluminum is falling, and aluminum goes a great deal farther, as it is so light. The new coins are of five, 10 and 25 centimes, or, as they are more commonly called one, two and five sous, in denomination. A sou is the same value as an American cent. This is the first time aluminum has been adopted by any nation for coinage, on any large scale.

The inauguration of railway travel through the tubes of the Pennsylvania Railroad Company between New Jersey and Long Island took place recently without any demonstration and under very prosaic conditions. The first trip was made by a train of dump cars hauled by an ordinary switch engine, which passed from Jersey City beneath the North River, Manhattan Island and the East River to Long Island City. The formal opening of this great work will probably take place within the next few months.

Dr. James B. Angell, president emeritus of the University of Michigan, was recently notified that he has been decorated by the Emperor of Japan with the first class of the Imperial Order of the Sacred Treasure. The notification of the honor came to Dr. Angell in the form of a letter from K. Matsim, charge d'affaires of the Japanese embassy at Washington. The letter read in part as follows: "I have the honor to inform you that his majesty, the Emperor of Japan, has been pleased to confer on you the first class of the Imperial Order of the Sacred Treasure in token of his high esteem for you as one of the foremost educators of the age."

The town of Grand Falls has lately been created in the wilderness of the interior of Newfoundland. Lord Northcliffe, the great London publisher, has invested \$6,000,000 in forest lands and paper mills and is building a town at this point. A 25,000-horsepower electric plant, run by water, has been developed, and the paper will be shipped direct to England from the port of Botswood. Lord Northcliffe thought he was paying more than he should for the paper used on his sixty or more periodicals and so, in his characteristic way, he came across and set up a mill of his own, where the wood from which the paper is made was cheap.

No nomination of a justice to succeed the late Justice Peckham is likely to be made until December. With the exception of Justice Harlan, who was appointed by President Hayes, November 29, 1877, all the justices have been appointed during the sessions of Congress. It is an unwritten law that this custom be followed as the President is expected to confer with members of the Court before making the appointment. The objection to the seating of a justice during a recess of Congress is that the failure of the Senate to confirm his nomination would seriously impair the weight of any decisions on important cases in which he may have participated.

Although the trick ballots made it possible to throw out thousands of negative votes, the proposed constitutional amendment under which it was planned to disfranchise 50,000 negro voters in Maryland, has been defeated by a majority of about 15,000. Four years ago a similar but more drastic amendment was defeated by a majority of 34,058. The trick ballots, it is claimed, practically nullified the negro opposition to the amendment, so that the vote against the amendment represents white opposition.

By a unanimous vote the board of managers of the National Geographic Society has approved the report of the special committee appointed to examine the records of Commander Robt. E. Peary. The report was to the effect that Peary reached the north pole on April 6 of this year, as he claims. The board also decided to appoint a committee "to examine the records of other explorers." Although Dr. Cook was not named in the resolution it was directed at him. Gold medals were awarded by the board to Commander Peary and Capt. Bartlett, skipper of the *Roosevelt*.

John D. Rockefeller somewhat electrified things when some time ago he announced that he had given a million dollars to be used in fighting the hook-worm disease, a form of anemia which is caused by a parasite especially prevalent in some of the Southern States, and which was but recently discovered by Dr. Charles Wardell Stiles of the United States public health and marine hospital service. The presence of the parasite in the human system renders the individual much more susceptible to other diseases such as consumption, fevers, etc. Mr. Rockefeller has appointed a board composed of prominent men, and they have chosen to call their body the Rockefeller Commission for the Eradication of the Hook-worm Disease.

William J. Gaynor, Democrat, has been elected mayor of Greater New York by a plurality of 77,000 over Otto T. Bannard, the Republican-Fusion candidate. William R. Hearst, independent, ran third in the mayoralty race, his vote falling about 30,000 below that of Bannard. Tammany's New York County ticket, including district attorney and sheriff, was swept to defeat. The Fusionists also have elected their city ticket—the comptroller and president of the board of aldermen, and all borough presidents. Gaynor's victory is a hollow one so far as Tammany is concerned, for with the loss of the control of the all-important board of estimate, made up of the mayor, comptroller, president of the board of aldermen and borough presidents, its actual defeat is overwhelming.

The S. H. Wakeman collection of the manuscripts of Poe, Hawthorne, Thoreau, Lowell, Longfellow, Whittier, Bryant, Emerson, and Holmes, brought together with great care and expense during the past ten years has been sold to J. Pierpont Morgan. This addition to the millionaire's already fine collection makes his superior even to the W. H. Bixby and other collections. The price paid for the manuscripts is said to be not less than \$50,000 and may be much more than that. The additions which he has now made to his collection of Poe manuscripts makes Mr. Morgan's the finest in existence, and the Thoreau writings are especially noteworthy. They include the "Journal" which comprises 14 out of 20 volumes of Thoreau's published works, and in the original manuscript it covers 39 closely written books, still in the wooden chest made by Thoreau's own hands and in which they were left at the time of his death.

Among the Magazines

MR. TAFT'S WARNING.

It is now quite safe to assume that President Taft will not commit himself on the proposition to dig a 14-foot waterway through the Mississippi valley until after his return to Washington.

It is further evident that the President will not at this time commit himself on any other proposition that is now engaging the attention of the people, unless that proposition is one to which, or against which, he has already been pledged by the Republican party platform.

In the West, while the executive expressed himself favorably to resource conservation and to irrigation, he was silent regarding particular enterprises, or, if not actually silent, he at least avoided making definite pledges.

In the Mississippi valley the President, while loudly proclaiming his friendly attitude toward waterway improvement in the abstract, has very carefully avoided telling the people whether or not he approves of the plan to build a 14-foot channel through the Mississippi valley or to deepen the channels of the Ohio and Missouri Rivers.

At Memphis Mr. Taft even sprinkled a little cold water in the faces of the Lakes-to-the-Gulf waterway enthusiasts. He declared "most emphatically" that Memphis had not grown by reason of its river facilities, but by reason of its railroad facilities. "If you have the river and it is not used," he said, "then there is no use in pouring millions into it to improve it. You men of Memphis . . . are now shipping your cotton and your goods by railroads even when you have the river at your door, and you are not going to ship your cotton and goods by river even when you have a deep waterway from the lakes to the gulf unless you know that it will be of profit for you to do so. I use these words as words of warning to you."

It is evident that the President regards his present trip as one for investigation and study of conditions in the several sections of the country. He does not intend to permit local enthusiasm to sway his judgment. He wants the cold, hard facts. "This proposition of a 14-foot channel," he declares, "requires much serious thought and study. The entire river must be studied by experts." There is little reason for believing from what the President has thus far said that a Lakes-to-the-Gulf deep waterway bill will be passed by the present Congress at the regular session which begins in December.

Senator Theodore E. Burton, chairman of the waterways commission which has been making a tour of Europe, did not give an interview when he passed through Washington, but a statement was published purporting to reflect his views. These views were so like those which Burton is known to hold that it may be taken for granted that whatever talk he had was along the lines published. It is not very encouraging for those who are anxious for a 14-foot waterway from the lakes to the gulf.

It was stated in this story that the commission would have to make a preliminary report by the first of January, but that it would be a year at least before a comprehensive report could be made or an examination of the waterways of the United States concluded which would enable the commission to make such a report as would give Congress proper information upon which it could make future appropriations. Coupled with this was an intimation that there would be no river and harbor bill at the coming session of Congress which would throw it over to the short session and endanger its passage. Without a river and harbor bill in the coming session of Congress anything in the way of substantial improvement of the Mississippi River will be thrown back at least two years. Of course, Burton is not the whole thing on the commission, and the others may be able to overrule him.

Another intimation that was decidedly against the 14-foot waterway was the statement that Burton believed the people of the Mississippi valley should be satisfied with a nine-foot channel, and they might have to wait for that. The nine-foot channel in the Ohio River was commended.

Taking all these things into consideration, it is possible the Mississippi River is not going to profit very much at the hands of the waterways commission which has been making a tour of investigation in Europe.—Woman's National Daily.

FIRST DECISION IN PANAMA LIBEL SUITS.

The first judicial decision in the famous Panama libel suits brought by the Government at Theodore Roosevelt's instigation against the New York World and the Indianapolis News is almost universally approved as another guaranty of the freedom of the press. In refusing to sign the order for the removal of Delavan Smith and Charles R. Williams of the Indianapolis News to the District of Columbia, Federal Judge A. B. Anderson took the position that publishers charged with criminal libel must be tried in the jurisdiction in which the libel was most obviously committed—that is, at the place of publication. Judge Anderson did not prepare a written decision in this important case, but said in part:

"This indictment charges these defendants with commission of a crime in the District of Columbia. Now, the Constitution of the United States, in one of the amendments, provides that the accused shall be tried in the State or district where the offense is committed.

"The Indianapolis News is owned by these defendants, conducted and published by them, printed by them in the city of Indianapolis, State of Indiana. At the time covered by this indictment it had a daily circulation of about 90,000 copies. All but about 2,000 were circulated and disposed of in the State of Indiana; some four or five hundred more in one or two of the adjoining States, and to the District of Columbia there were sent by mail about fifty copies to subscribers, persons who ordered them sent. The defendants have no agent or bureau or office, and

maintain no agent or bureau or office in the city of Washington, in the District of Columbia, for the circulation of papers within that district.

"So the question, do the defendants when they prepare and publish fifty copies in the city of Indianapolis and deposit them in the United States mail in this building to be transmitted by mail to fifty subscribers in Washington—do they publish those fifty copies in Washington? If they do, if they did, the court has jurisdiction of the offense. I will not go so far as to say that it has of the defendants. But if they did not, then the court has neither jurisdiction of the offense, nor the defendants.

"To my mind there is but one conclusion to be drawn. Everything that the evidence shows that the defendants do or did, they do and did in the State of Indiana, city of Indianapolis. . . .

"Where people print a newspaper here and deposit it in the postoffice here for circulation throughout the counties and districts, there is but one publication, and that one is here. If that is true, then there is no publication, according to the evidence, in Washington."

Then he added by way of final comment:

"To my mind that man has read the history of our institutions to very little purpose who does not put very little valuation on the possible success of evidence such as this. If the history of liberty means anything, if the Constitution means anything, then the prosecuting authority should not have the power to select the tribunal if there be more than one to select from, at the capital of the nation, nor should the Government have the power to drag citizens from distant States there for trial."

If this decision had been in support of the Government's contention, says the Brooklyn Eagle (Dem.), the result would have been to put every newspaper in the country at the mercy of the Attorney-General, an agent of a party administration. Admit that the libel is committed wherever any copy of a publication is sold, and we have the possibility of hundreds of simultaneous prosecutions, all before Federal courts, and all based on a single publication. As Judge Anderson did not pass upon the question of guilt—although he touched upon this informally in his speech—but merely on the question of jurisdiction, it is still possible for the Government to prosecute *The World* in New York City and *The News* in Indianapolis. *The New York Sun*, however, thinks that the present Administration would welcome any dignified excuse for throwing these cases overboard.

It will be remembered that the purpose of the suits was to punish the papers named for publishing sensational charges of graft in connection with the Government's purchase of the Panama Canal, these charges involving among others William Nelson Cromwell and Douglas Robinson, Mr. Roosevelt's brother-in-law. Says the Boston Advertiser (Rep.):

"The decision of Judge Anderson, of the United States District Court at Indianapolis, is right, and wrong. It is right in condemning the plan to drag a man from Indianapolis to Washington to answer for an alleged offense committed at Indianapolis. But he is wrong in trying to argue that to call a man a thief, swindler, or liar is permissible, because the charge was made because of political, rather than social or personal animus. . . .

"We doubt whether the average man will assent to this view. The chorus of calumny, that ended in the death of President McKinley, for example, was more dangerous and more despicable than the most scurrilous letter about some private individual. The abuse of public men in this country has become a disgrace and abominable outrage.

The fact that lies about a public man are circulated by political workers should not excuse the offenders.

"On the other hand, Judge Anderson is wholly right in maintaining that it would be unwise to establish a precedent that a man can be arrested in the place where his offense has been committed, or where it is alleged that the offense was committed, and then taken to Washington to stand trial—unless under the order of the court for a change of venue, on proof that a fair trial is impossible at the place of arrest."

In regard to the actual decision involved, however, the press, regardless of party lines, voice a chorus of approval.—Literary Digest.

THE SO-CALLED "SPANISH SWINDLE."

The Department of State, at Washington, has received a report from the American Consul-General at Barcelona, Spain, in regard to the band of swindlers operating in various towns and cities in Spain, who make a practice of writing to persons in the United States respecting the imprisonment of a relative and the guardianship of a child.

The Consul-General states that the alleged prisoner generally describes himself as a political prisoner of Cuba; he is at the point of death and has but one friend—the prison priest—through whose good office he is enabled to smuggle an occasional letter out of the prison fort.

The prisoner is rich. He has a fortune in cash on deposit in the United States, but the certificate of deposit is concealed in a secret receptacle of his valise; the valise itself has been taken possession of by the court at Carthagena, which tried and condemned him, and will be held until the prisoner or his representative has satisfied the cost of the trial. The prisoner has an only daughter; dying in his prison, his sole thought is of this beloved offspring. He has no friend or relative in Spain to whose care he can commit her. In this emergency his thoughts turn to the distant relative in the United States whom he has never seen and of whom he knows only through hearsay or the family tree. Will the distant relative assume the guardianship of the darling daughter, and the darling daughter's fortune of about \$30,000? If the distant relative accepts the trust one-fourth of the prisoner's entire fortune will be the material reward. The good priest will go at once to the United States and take the darling daughter with him. There is but one condition; the ready money which the prisoner brought with him to Spain has been exhausted; the distant relative is therefore requested to send enough to liberate the valise containing the secret receptacle and the certificate of deposit. The money is to be sent to the good priest at an address indicated, and, having received it, the good priest will at once secure the valise and start for America, the "land of the free and the home of the brave," with the darling daughter.

The above is generally the first letter of the series. It is quickly followed by another in which the prisoner pathetically states that his strength is rapidly failing and the end is near. He beseeches his dear distant relative to assume the trust and be a loving father to the darling daughter. The third letter is from the good priest himself, who in brief, touching terms, and hopelessly bad English, announces the death of the unhappy prisoner; the good priest adds that the darling daughter is under his care. He is ready to put his promise into execution and start for the United States as soon as he shall have received the necessary funds from the distant relative.

The good priest frequently incloses with his letter a bogus newspaper clipping announcing the death in prison at Barcelona of the famous Cuban patriot (sometimes called Augustin Lafiente); the newspaper notice also speaks cunningly of the confiscated valise and the darling daughter.

It is a simple scheme, but presented in such a plausible way that almost any unsuspecting "distant relative" of European extraction would be more or less deceived by the glad prospect of falling heir to the agreeable custody of a darling daughter with a big fortune, and a one-fourth interest therein as an additional recompense.

Naturally the first impulse of the distant relative is to ask a lawyer or a judge or some authority what course he ought to pursue in the premises, but as he thinks of doing this his attention is taken by the warning in the prisoner's letter beseeching him not to mention the matter to any living soul lest the secret of the valise and the hidden receptacle be indiscreetly betrayed.

The valise, after all, with its concealed certificate of deposit, is the key to the situation and possession must be taken of it before anything can be done or said. This (so cunningly set forth by the prisoner) is very evident to the distant relative, and so he quite frequently preserves the secret intact, and instead of consulting a lawyer or writing to the American Consul-General at Barcelona he quietly sends a draft for the sum demanded to the good priest and awaits results. Of course he waits in vain, and the poor, dead prisoner and the good priest and the darling daughter in the course of time pass out of his life forever, leaving him only an uncomfortable memory of the money he so cheerfully contributed to the confidence game.

For nearly twenty years these same knaves have been practicing their swindle, and it is needless to suggest that they are very carefully organized; they have confederates not only in the United States but in most other countries. The confederates in question select a man and find out all they can about him; they get hold of family names, family origin, and family characteristics. This information is transmitted to the rascals in Spain, and letters are at once written to the prospective victim. The scheme is presented and developed in a very plausible way and many of our fellow-countrymen have "bitten" promptly and cheerfully.

Under the Spanish laws a felony must be consummated before the police may act, and a mere attempt to obtain money by false pretenses does not appear to warrant arrest. The money must be actually paid over and the prosecuting witness must be present in propria persona to testify; otherwise prosecution would be useless.

Recently the letters written to the distant relative have varied somewhat from the original; the political prisoner having become a noted Russian banker who absconded, leaving a deficit of some millions of roubles, killed in a quarrel in England another Russian, and finally took refuge in Spain, where he was apprehended and charged with manslaughter.

This change of character, however, is immaterial, and in the future more new characters will probably be introduced by the gang. The scheme is the same, and the public is warned to place no credence in such or similar letters.

Every effort has been made by the Department of State and its representatives in Spain to unmask these scoundrels and bring them to justice, and the Spanish authorities have also been active and several members of the gang have been apprehended and held for trial, but so far no convictions have resulted, owing probably to the

peculiarity of the Spanish law referred to in the report of the Consul-General at Barcelona.

Department of State,

Washington, D. C., October, 1909.

A FORTUNE IN POPCORN.

People who are thrown on their own resources or who want to help out an income that is meager, often ask what work they can take up which they can do at odd times and which will net them a little extra cash. There are hundreds of little enterprises that can be undertaken to advantage in such cases. It is best not to let your ambitions soar too high but to choose some sort of occupation which meets an existing and common demand, and then start on a small scale, until you learn the ins and outs.

In many towns and cities widows and others have made a good living preparing and selling popcorn. This is an industry that has been discovered within the last few years, but now there is scarcely a place which hasn't one or more popcorn makers. There is no food which is more wholesome or more digestible than popcorn, and many people would rather have it than the finest confectionery. When carefully popped and bagged it finds a ready market almost everywhere. The public prefer it with a little melted butter mixed through it, and salted; sometimes sugar is called for instead of salt.

You may scoff at the idea of making money off popcorn, but there's a fortune in it, as there is in many another neglected and despised trade. At a number of the World's Fairs the men who have held the popcorn concession have become rich in a few months. A still more striking case is that of the Humphrey family in Cleveland. They were left 12 years ago badly in debt, and there seemed to be nothing in the city which would give them a living. However, instead of bewailing their fate, denouncing conditions, joining the army of the unemployed, or waiting for some one to help them, they set to work at the likeliest thing they could think of, which was to pop corn on the kitchen stove and peddle it about the streets.

They were honest people, they gave good measure and used good materials; the public found out that their popcorn tasted "more-ish" and steadily their circle of customers grew until the demands were too great for their modest home plant to supply. Then they devised machinery for doing part of the work and went into the business on a larger scale, adding taffy and a few other simple articles to their line.

After a while they got the popcorn concession at Euclid Beach Park, a local pleasure resort. But the place ran down owing to its reputation as a resort for boozers, and it deservedly failed. The Humphreys had saved up a little money and were able to take the management of the park over. They changed things entirely, cut out the questionable attractions and made the place a resort for decent people. The result was that in the first season they made \$10,000 off their popcorn alone. There are eight of the Humphreys in the company now, and though their concern is capitalized at only \$5,000, they do a business of \$350,000, it is said.

It would be misleading to assert that their success could be repeated anywhere and everywhere, but the fact remains that there are similar opportunities all around us, only waiting for us to see them and develop them. It is not necessary to do big things, and especially not necessary or wise to begin big; the enterprise which is started on a small scale and grows steadily with the demand is the one that pays best in the end.—The Pathfinder.

Syracuse, Ind., June 1, 1909.

Mr. James Glass, Big Timber, Montana.

Dear Sir: I arrived home day before yesterday, after a most pleasant and instructive visit to your Montana proposition.

I have been on the lands and investigated the irrigation system of Glass Brothers Land Company, and am convinced that the essentials of a very prosperous community are there, namely, plenty of water, rich soil and much sunshine; and I would say that the fine appearance and phenomenal yields of domestic fruit orchards in the vicinity of your lands, which have no spraying or other care given them, lead me to believe that commercial orchards of great value may be grown on your lands; and I would not hesitate to plant quite liberal of the hardier apples, cherries, plums and pears; and smaller fruits in the berry line.

Because of these conditions I hope and expect to be one of the number to possess these goodly lands.

(Signed) EDWARD DEETER.

Mr. Deeter is a noted horticulturist of northern Indiana and is a son of Elder Deeter of the Church of the Brethren.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

ESCHATOLOGY, or the Doctrine of Final Things

By Eld. T. T. Myers

This little book presents in condensed form the substance of a series of eight lectures delivered before the students of Mt. Morris College, during its fourteenth Annual Bible Institute. In response to numerous and urgent requests from those who attended the Institute this book was brought out. The present edition is reduced to some 25 or 30 copies. The book formerly sold at 25 cents. While our stock holds out we offer them at
10 cents each postpaid.

Order to-day. To-morrow may be too late.

NEFF'S CORNER

If my plans as now fixed are realized, myself, wife and babies will be sitting in the sunshine of perpetual summer ere these lines appear in print. We expect to be busy, but never so much so but that, with plenty of help available, we can do more. One brother who has bought land in Mexico wants a number of acres cleared at once and sown to alfalfa. Some will want their land planted to corn, some cotton, some garbanzas, some sugar cane, some bananas, some oranges or other fruit, and my part of it will be to employ native help and oversee this work of improvement and cultivation. In fact one of the conditions that makes farming operations so very profitable in Mexico is the cheap labor there. Good hands can be had at 45 cents per day, they boarding themselves. This being the case, many will buy land in Mexico (are doing so, in fact) and have it farmed for the handsome income it brings, and others with a view of going to it after it has been brought into a good state of cultivation. By making a down payment of \$6.25 per acre for the land and investing a small sum in improvements investors realize a good income from their land in a very short time. The land can be bought in tracts of ten acres or more. For further information address:

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men."

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." **Ask for terms to agents.**

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.

CALIFORNIA HOMES . . .

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. **California** appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"The Alfalfa shown above was cut six times this season, as follows: May 20, yield 8 tons, July 1, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.

J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.

C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, etc. for homeseekers.

One Dollar Per Year

THANKSGIVING MEDITATIONS

L. U. HULIN

Another year with blessings filled, has passed away;
With thankful hearts we sing God's praise this gladsome
day;

His liberal hand, throughout this glorious land,
From lakes to ocean strand hath freely given.

Another year has passed away, and all is bright;
No clouds our land are hovering o'er to mar the light;
Gayly our flag unfurled speaks peace to all the world,
And every land concurs with welcome voice.

Another year has passed away, and lo, the change!
Yet, in a world so great as ours, is it so strange?
Some voices sweet in song, we heard so oft and long,
Have joined that happy throng, the heavenly choir.

Another year before us lies, little we know,
What is in store for us as on we go;
But if we do our best and leave to God the rest,
Our work will stand the test, though tried by fire.

North Lima, Ohio.

OF THE

Great Future for Miami Valley

in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

NEFF'S CORNER

If my plans as now fixed are realized, myself, wife and babies will be sitting in the sunshine of perpetual summer ere these lines appear in print. We expect to be busy, but never so much so but that, with plenty of help available, we can do more. One brother who has bought land in Mexico wants a number of acres cleared at once and sown to alfalfa. Some will want their land planted to corn, some cotton, some garbanzas, some sugar cane, some bananas, some oranges or other fruit, and my part of it will be to employ, native help and oversee this work of improvement and cultivation. In fact one of the conditions that makes farming operations so very profitable in Mexico is the cheap labor there. Good hands can be had at 45 cents per day, they board themselves. This being the case, many will buy land in Mexico (are doing so, in fact) and have it farmed for the handsome income it brings, and others with a view of going to it after it has been brought into a good state of cultivation. By making a down payment of \$6.25 per acre for the land and investing a small sum in improvements investors realize a good income from their land in a very short time. The land can be bought in tracts of ten acres or more. For further information address:

ON THE SWEET GRASS

J. F. Appleman and wife, Plymouth, Ind., and R. E. Arnold, Elgin, Ill.

Glass Brothers Land Company, Big Timber, Montana.

Big Timber, Mont., May 8, 1909.

Gentlemen: I have taken several days in looking over Sweet Grass County, Montana, and have looked over your irrigation project. I have been careful in my investigation, looking into the grain, stock and fruit raising, and must say that I am more than pleased with what I have found and wish to recommend same to my friends; and I also feel that anyone looking for a home should not wait until tomorrow, but go now as these lands will surely be sold in a short time on the liberal terms you are offering settlers. The lands and irrigation works are far better than you have told me.

Thanking you for your kindness, and wishing you success, I am,

Yours truly,

(Signed) J. F. Appleman, Plymouth, Ind.

Formerly State Superintendent of the Mexico (Ind.) Old Folks' & Orphan Children's Home.

Glass Bros. Land Co., Big Timber, Mont.

Elgin, Ill., Oct. 18, 1909.

Gentlemen: It was my pleasure to spend several days investigating your lands and irrigation project in Sweet Grass County, near Big Timber.

The longer I looked the better I was impressed with the possibilities of the country. Alfalfa fields were the finest I ever saw. Oats, wheat and other grains were in abundance. I am fully convinced that apples will grow to perfection there. Wherever orchards were seen the trees were full of perfect apples and not a wormy one could be found.

Your irrigation system is well constructed and my opinion is that it will supply more than ample water for your lands.

I was so well pleased with the conditions and possibilities of the country that I purchased 160 acres and propose to put a tenant on it and improve it, and also expect to put at least 19 acres in apples in the spring.

Persons desiring to better their conditions should investigate your lands. Your terms of sale are very liberal.

With best wishes, I am,

Yours very truly,

R. E. Arnold.

We invite you to investigate the possibilities of these lands.

For price, terms, etc, address,

GLASS BROS. LAND CO.

BIG TIMBER, MONTANA.

Arnold's Chart of Paul's Journeyings

A useful teacher's tool that you should have close at hand while teaching the life of Paul. Prepared by Bro. C. E. Arnold. Clear outline journey maps; and the principle events and places arranged in easily read columns; all on one sheet of paper, 12 inches by 19 inches. Folds within stiff covers small enough to slip into one's pocket. Twenty cents.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the near-est possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

MARK HOPKINS

D. C. REBER, PRESIDENT ELIZABETHTOWN COLLEGE

"THE first of living educators," as Prof. A. P. Peabody calls him, was born at Stockbridge, Mass., in 1802. At twelve, he attended Clinton Academy in Oneida Co., N. Y., while staying in the family of his uncle, Dr. Sewell Hopkins. Here he began to study Latin. Returning to Massachusetts, he worked on the farm and pursued his studies at home, receiving but little private instruction from Rev. Timothy Woodbridge at Pittsfield. Under the tuition of Rev. Woodbridge, Hopkins sought him as a constant companion.

At the age of seventeen, Hopkins undertook the study of law, being now ready to enter college; but becoming dissatisfied with his progress he taught a district school in Richmond, Mass., and continued his studies, so that he could enter the Sophomore class at Williams College. This he did in 1822, during the presidency of Dr. Griffin. Hopkins proved himself a brilliant student, preferring metaphysical studies. While at college, he delivered an oration entitled, "Modern Chemistry-Revelation Confirmed by its Discoveries." Hopkins graduated at the age of twenty-two and was the valedictorian of his class.

Next we find him studying medicine at Pittsfield. In the spring and summer of 1825, he taught in an academy at Stockbridge and in the same year became a tutor in Williams College. During the first year of his tutorship, a remarkable revival took place in the college. The president, Dr. Griffin, said: "That revival saved the College." It did settle its destiny. The college thereafter stood on a permanent and prosperous footing. The associate tutors, Harvey and Hopkins, took a prominent part and their influence was extensively felt. Upon receiving his master's degree, he delivered an oration entitled, "Mysteries," which was republished several times.

Hopkins went to New York to study medicine where he devoted part of his time to teaching; but in 1827, he returned to Pittsfield, Mass., to continue his professional studies. While at Pittsfield, he assisted

Prof. Dewey in the high school. In 1829 he received the degree M. D. from Pittsfield; and in the following spring (1830) he was elected professor of moral philosophy and rhetoric in Williams College, succeeding Prof. Wm. A. Porter. He had completed arrangements for a permanent residence in New York City, but this election changed the whole course of his life. Henceforth he devoted all his time to teaching,—a congenial pursuit. Dec. 25, 1832, he married Miss Mary Hubbell, of Williamstown.

Mark Hopkins achieved eminence along several lines. He was a very busy man all his life, of which more than half a century was devoted entirely to the cause of education in one form or another. His greatness rests upon a noble ancestral heritage, profound scholarship, upon being an inspiring and devoted teacher, an ideal college president for thirty-six years, an eminent Presbyterian theologian, a scholarly lecturer, and an author whose works have become useful textbooks.

If heredity contributes any elements to a man's greatness, Mark Hopkins had an endowment such as was well utilized by him and which he transmitted to posterity not diminished but honorably increased,—a rich legacy to succeeding generations.

His Genealogy.

The name Hopkins is of Puritan origin, and his American ancestors were men of sterling character, brilliant intellect, and several became very prominent. His great great great grandfather (therefore he belonged to the sixth generation of Hopkins in America), Stephen Hopkins, moved from Massachusetts with Davenport, and settled at Hartford, Conn., in 1636. John Hopkins, the eldest son of Stephen, settled at Waterbury, Conn. Timothy Hopkins, the fourth son of John of Waterbury had nine children. The oldest was Samuel Hopkins who was a graduate of Yale College in 1741, and who afterwards published a system of

divinity. He was called "The Divine." The youngest was Mark Hopkins, the grandfather of Mark Hopkins, the subject of this sketch. He graduated from Yale in 1758 and became eminent as a lawyer. He entered the Revolutionary War as Colonel, took sick at White Plains, N. Y., where he died two days before the battle at that place in 1776.

Archibald Hopkins, the eldest son of Col. Mark Hopkins, settled at Stockbridge, Mass. He married Mary Curtis, a woman of uncommon strength and excellence of character. Their eldest son was Mark who became the president of Williams College three years before the death of his father in 1839. His mother was present at the first commencement of Williams College in 1795, although the college was founded in 1792. The grandmother of Mark was a daughter of the well-known missionary Sargeant and a niece of Ephraim Williams, the founder of Williams College. Sargeant married the half-sister of Ephraim Williams.

Hopkins as a Teacher.

Some one defined a university as being "Mark Hopkins at one end of a bench and James A. Garfield at the other end." In my early boyhood, the life of Garfield became a model for me worthy of imitation and now to study the life of his honored teacher has given me new aspirations. Hence I have taken pains to enter into details. Dr. Hopkins' great work as a teacher was done at Williams College. As professor of moral philosophy and rhetoric for six years, he showed himself worthy of promotion, and competent to become the President of the College; and when he attained his three score and ten, he declined to perform the arduous duties of his office, as he had said he would upon reaching that age, but still served as a professor in the college for more than fourteen years, yielding his post of duty only to the summons of Death.

He served Williams College as tutor and professor, for fifty-nine years, of which fifty-seven were years of continuous service. In 1886, 1726 alumni were still living, of whom all except thirty-one were taught by him. Of the alumni deceased up to that time, he had taught five hundred and thirty-four making a total of two thousand two hundred and twenty-nine. Out of all the alumni of the college, there were only six hundred and thirty-one or one-fifth whom he did not teach.

Perhaps the pupil of Hopkins who became the most famous and most revered, was Pres. James A. Garfield. Garfield entered as a Junior in Williams College in 1854, and graduated in 1856 with high distinction. Garfield ever manifested great interest and love for his alma mater, and became an influential trustee. He visited the college annually and had his children educated there. Upon one of these annual visits, at a reception held at Dr. Hopkins' house, Garfield then a U. S. Senator, paid a beautiful tribute to President Hopkins. In the midst of the throng, he put his arms

around him and said, "I don't believe you know how much we love you."

On the evening before the inauguration of President Garfield, he attended a reunion and banquet of his classmates. And on the very day of the inauguration, after he had taken the oath of office and had delivered that splendid inaugural address, he returned to the White House, and gave a reception to the alumni of Williams College. Dr. Hopkins was present at this occasion, and in behalf of his fellow alumni, he paid a high compliment to President Garfield.

Within less than two years after that, after Garfield had been assassinated and had died, at the first meeting of the trustees since his death, a commemorative service was held at Williams College, for which occasion Dr. Hopkins prepared a masterly and eulogistic memorial address, at the request of the trustees, July 4, 1882.

Hopkins as a College President.

When the presidency of Williams College became vacant in 1836, Dr. Absalom Peters had been chosen as the successor of Dr. Griffin but declined to accept the honor. The trustees then elected Dr. Mark Hopkins, and on Sept. 15, 1836, he was inaugurated as the fourth president of the college. He was then only thirty-four years old, but he proved himself fully capable for the responsible position.

Williams College is situated at Williamstown, Mass. It has been called and truly so, "The Cradle of Foreign Missions," as the first foreign missionary, sent out of America, Samuel J. Mills, was a student of Williams College from 1806-1808. Mills was one of the three young men who dedicated themselves to the cause of foreign missions at what is called the "Haystack Meeting." The other two men, Gordon Hall and James Richards, while students of the college, had been led by Mr. Mills to take a walk. They were led to a distant meadow, where behind a stack of hay, they spent the day in fasting and prayer and conversing on the duty of missions to the heathen. These men with others formed a missionary society in 1808 in the northwest lower room in East College, one of the buildings composing Williams College.

During the administration of Mark Hopkins many improvements were made at Williams College, the resources greatly increased, and the attendance more than doubled in the first quarter century. The Astronomical Observatory, the gift of David Dudley Field, was erected in 1836. This was the first building exclusively built for that purpose in the country. When Hopkins entered as a student only one building constituted the equipment of the College. Old East College was burned in 1841. The following buildings arose during Hopkins' connection with the institution: Griffin Hall, The Field Observatory, Old West College, East and South Colleges, The Chapel, Lawrence Hall, Jackson

Hall, Kellogg Hall, Clark Hall, Morgan Hall, and the gymnasium. The first gymnasium in the country was located at Northampton at the Round Hill School taught by Cogswell and George Bancroft. This consisted of a trapezium, and a few horizontal bars in the open air. Through the instrumentality of Dr. Hopkins, a regular gymnasium was built, the first of the sort in the country. The alumni have built one building called Alumni Hall. Besides these, the grounds were enlarged, additions were made to the libraries, philosophical and chemical apparatus was provided, the productive funds of the college were increased, and the professorship of Christian Theology was founded by Mr. Jackson of New York in 1858.

While president of the college, Dr. Hopkins performed multitudinous duties in addition to his official labors. In that position he exerted a powerful influence. Let us take a birdseye view merely of his official relation. The position itself involves great responsibility owing to its powers and opportunities. He is the representative of the institution, the head of an influential board of trustees. The impress of his character is stamped on those under his influence. He needs the respect and confidence of the community and society at large. His character must have sufficient weight to reconcile his subordinates. He must conduct the college through scenes of special exigency and trial. President Hopkins encountered two such crises. The first when Old East College burned in 1841 resulting in a total loss threatening a withdrawal of students. But not one left. The other was during the Civil War, when prices arose so enormously, the funds were insufficient to pay adequate salaries to the professors. But the State of Massachusetts, through the influence of a few friends of the college in the Senate, gave twenty-five thousand dollars (\$25,000) annually to save the institution. As president, he must guide the studies of aspiring young men in the last year of their college course, govern the college successfully, attend to the wants of all and turn quickly from one engagement to another. He sustains a parental relation to all the students, must give his personal attention to students guarding their morals, and promoting their religious development.

He changed and enlarged the course of study. It was his custom to conduct the freshman class for a short time at the beginning of every college year to become acquainted with all the students. He taught anatomy and physiology, metaphysics, and ethics to the senior class.

On 'Saturday forenoon, the senior recitation was theological, the textbook being the shorter catechism, in which respect this college stood alone.

The discipline of the college was administered according to his own individual system. The following quotation gives his views on the subject: "The end

of a college is education. There should therefore be no regulation or restraint which is not subservient to that end; and when it becomes necessary to enforce those regulations that are thus subservient, it would be treason to the cause of education not to do it, at any sacrifice whatever. That college is in the best state in which the least government is necessary. It is always unfortunate when much is thought or said about government."

The educational world soon recognized the power and influence emanating from Williams College; but to the urgent invitations to occupy other posts of usefulness, he uniformly replied, "I dwell among mine own people." In 1837, the degree D. D. was conferred on him by Dartmouth College. From the University of New York he received the title LL. D. in 1857.

Dr. Hopkins as a Minister.

Hopkins made a public profession of religion in 1826, uniting with the Congregational Church at Stockbridge. He was licensed to preach in 1833, though he never pursued a theological course of study. While a professor in Williams College, he assisted Dr. Griffin in supplying the college pulpit. At the time of his inauguration as president of the college, he was ordained pastor of the college church in which capacity he served a long time.

He took an active part in the deliberations of the American Board of Commissioners for Foreign Missions of which he was president for a number of years (1857-) at Providence, R. I.

He delivered many sermons and discourses on special occasions. His baccalaureate sermons were published in book form. His subjects were:

1850—Faith, Philosophy, and Reason.

1851—Strength and Beauty.

1852—Receiving and Giving.

1855—Perfect Love.

1856—Self-Denial.

1857—Higher and Lower Good.

1858—Eagles' Wings.

1859—Manifoldness of Man.

1860—Nothing to be Lost.

Hopkins as a Lecturer and Author.

His published works were the result of his work as a teacher, minister, and lecturer. In 1844, he delivered a series of fifteen lectures before the Lowell Institute of Boston. These were on the Evidences of Christianity, were published as a textbook, and are still used as such in many colleges.

In 1847, a volume of miscellaneous essays and discourses was published. He delivered lectures on moral philosophy in 1858 before the Lowell Institute, of which I am unawares as to their being collected in book form.

The next work was entitled, "The Law of Love and

Love as a Law, or Christian Ethics" and appeared in 1869.

Probably his chief work as an author is entitled "An Outline Study of Man" which was published in 1873. It is a textbook on psychology. He treats man both from a physiological and from a psychological standpoint. A new feature of the book in its day is the analytical chart accompanying it, presenting to the eye in schematic form the various mental powers, their classification and relations to each other.

His last work appeared in 1874 under the title "Strength and Beauty." Dr. Hopkins lectured in the Smithsonian Institution at Washington, D. C., and before various scientific and literary associations. He died in 1887 at the ripe age of eighty-five.

Elizabethtown, Pa.

HOW THE BIG APPLE CROP WAS SAVED.

S. Z. SHARP.

FOR ten years the fruit growers of Grand Valley, Colo., had large crops, but in 1907 an unusually late frost destroyed the fruit except in a few favored localities. The majority of the growers hoped that next year the same thing would not occur and they would reap the usual large harvests. A few extensive growers were not willing to take chances. They had learned that the orange growers in California sometimes saved their crops by means of "smudge pots" and these few growers made investigation and were induced to make an experiment in their apple orchards. Mr. Haines near Fruita, prepared to "smudge" the trees in ten acres of his eighty-acre orchard. A few others in other sections did the same thing, making an experiment on a small scale with very satisfactory results.

The growers were surprised when in 1908 another late frost swept away an unusually large prospective crop. This put the growers on their mettle. Something must be done. There was but one thing to do to save the crops, that was to use the smudge pots. Public meetings were held and competent lecturers employed to present clearly and forcibly the importance of smudging. The growers were thoroughly aroused and nearly all agreed to enter into a combine against Jack Frost. The members of the fruit growers' association made investigation in regard to the best and cheapest materials for smudging. Railroad corporations were induced to haul crude oil from the wells to

the growers free of charge. Coal companies sold coal at a reduced price for the purpose of smudging. Bankers were so sure that the effort would be a success that they agreed to aid the farmers with loans, being assured of large bank accounts. A system of signals was agreed upon to notify each farmer when the frost was coming. Merchants, tradesmen, and professional men tendered their services to go into the orchards in a rush and light the smudge pots, watch them during the night, and refill them if the frost should be of long duration. Orchards lighted up for twenty-four miles in a stretch gave the appearance of campfires of a

mighty army. Although the temperature fell to twenty degrees Fahrenheit, the fruit crop was saved, since the heat in the orchards was raised eight degrees where the proper methods were employed.

The result is an enormous fruit crop in Grand Valley, and several other valleys where the growers resorted to smudging. A very fair idea of the operation may be gained by the accompanying cut which is a photograph taken in one of the orchards. The certainty of saving the fruit crop has given an additional impetus to fruit growing in Grand Valley, where a single crop from a full-grown orchard will reward the owner with as much as a thousand dollars per acre if the proper variety of fruit was selected.

Fruita, Colo.

"If the saloon is not a benefit to a community either socially, financially or intellectually, why maintain it? If it is a liability and not an asset, why not eliminate it? If it does more injury than good, why tolerate it?"

MISSIONS FOR OCEAN'S TOILERS.

JOHN S. FERNALD.

THE majority of writers on sea life and seafaring people seem to take delight in showing up the baser elements to be found in such connections, but, in the words of a bethel worker: "Jack, given the same environment as the landsman, will show as many adverse types." As a class, those who gain their livelihood from the sea compare favorably with people in like strenuous vocations in other lines. They include all classes and conditions of men, from the highest to the lowest. Old ocean demands of its votaries the most sturdy physical manhood, and naturally attracts many who are low in the moral and spiritual life. But as Paul tells us, in Romans 5:20, "Where sin abounded grace did much more abound," and we find the leaven of grace working a great improvement in the seafarers as the decades roll around. The army, the mines, the lumber camp, the range, the building trades, railroad and canal construction are fields already ripe to the harvest. The seeds sown by faithful workers are bringing forth fruit, and where Paul has planted and Apollos is watering, God is giving the increase.

Missions on shore, in the larger seaports, for the benefit of the seaman, are generally known as "bethels," and in them the sailor finds a substitute for the old-time sailors' boarding house with its bar and worse attachments. In the early days these boarding houses were the only resorts for the stranger from the ships, and it is not to be wondered at that many were led astray. But the bethels cater to the higher elements of man's nature, and tend to lead him into the better ways of life.

There is also another class of missions for the betterment of seafarers: the seacoast missions, which do their work among the men and in the families of the fishing communities along the coast. Perhaps the best known of these is the mission of Dr. Grenfell, who makes periodical trips along the bleak coast of Labrador, in a staunch steamer fully equipped to minister to the wants of the people in things spiritual, mental and physical. At every visit he sees to it that no person whom he can reach shall suffer for the want of food in either of these lines, if he can prevent it. Spiritual workers attend to the needs of the soul and the mind, advancing the cause of religion and education. Skilled surgeons care for the sick and injured, and the physical needs in food, clothing and shelter are all looked after. The people are taught how best to help themselves, and whatever they cannot do is done for them.

Other missions of lesser scope but along similar lines are maintained along the coast. The Maine Seacoast Missionary Society has a steamer, the *Morning Star*, that makes monthly visits to many points along the Maine coast not reached by the regular lines of travel. The coast line, direct, from Portsmouth, N.

H., to Eastport, Me., is two hundred miles and the headquarters of the society is at Bar Harbor, about midway between. This mission is four years old, and is the outcome of a vacation visit by Alexander P. McDonald, a theological student of Bath, Me., to some of the outlying islands. He saw the needs of the people, and called a meeting of the wealthy summer residents at Bar Harbor, at which he laid the matter before them. The responses were liberal and the society was organized. At first a small sailing sloop was used for the trips, but the needs of the work soon outgrew her capacity and the *Morning Star* was bought. The trips occupy about ten days each and are made monthly. There are fifty-two stations at which the society reaches more than five thousand persons in nine hundred and fifty families. The principal articles furnished are winter clothing, boots and shoes for the children, and medicines. The society has a circulating library of four thousand volumes, the books being exchanged at each trip of the steamer. Mr. McDonald is an ordained minister and is also competent to minister to the ills of the body in less serious cases. Patients who he thinks need it are taken to hospitals on the mainland. A Sunday school, on the home department plan, has six hundred and fifty members. During the year closing July 28, 1909, two hundred and sixty religious services were held, and five persons were baptized. The Lord's Supper was observed six times. The work of the mission for the common schools has resulted in increasing by five (5) the teaching force of the districts visited.

The seamen's bethels work along similar lines, but deal with the sailors who visit the larger seaport cities and towns. A fair representative of this class is the Seamen's Friend Society of Boston, which has headquarters at No. 287 Hanover Street, and a branch at Vineyard Haven, the port most visited by vessels going to and from New York by way of Long Island Sound. The Boston building is now being remodeled and enlarged to meet the growing demands upon it. During the past year more than thirty-five thousand seamen visited the Boston rooms and twelve thousand the branch at Vineyard Haven. Representatives of the society meet the various vessels as they come into port and invite the sailors to the rooms. Men who are in need are supplied with food and clothing and given such advice and help as will tend to uplift them, each case being treated according to its own conditions. Religious services are held every Sunday afternoon, and at others times, and frequent concerts, lectures and other elevating entertainments given. Comfort bags are distributed among the men of outgoing vessels, together with much comfortable clothing and other necessities as the wants of the individuals are learned by personal investigation. Every comfort bag contains, besides the usual supply of buttons, thread, needles, etc., a New Testament.

The society also maintains a bank at which many a sailor saves his earnings from the till of the rumseller, by making a temporary deposit while in port, or on a voyage, while some have permanent accounts there. There is a fine library, with the best books in many different languages, as the sailors visiting such a port as Boston come from all portions of the habitable globe. The reading room, with a postoffice attachment, gives opportunity for reading, receiving mail, writing letters and all the conveniences along those lines. The superintendent is in daily receipt of letters from thankful sailors, their mothers, wives and other relatives, in recognition of the aid extended to the sailor father, husband, brother or son. The society is ably seconded by the Woman's Seaman's Friend Society. This is but one of the many seamen's aid societies working in the seaports of the country, and many of the larger cities have other and smaller ones working along similar lines.

The sailors' bethel of the Hanover Street Baptist church in Boston has the Lord's Prayer in fifty-four different languages, and no sailor has ever visited the place who could not find it there in his native tongue.

One of the most unique of sailors' bethels is a dismantled ship on the beach at Rattlesnake Island near San Pedro, Cal., transformed into a chapel, with audience room, library, gymnasium, reading room, baths, and other accessories.

It is not alone when he is in port that the sailor is provided with good reading matter. The societies maintain "floating libraries," from twelve to fifty volumes according to the number of men and the length of the voyage, being placed on board any vessel whose men desire them. Each library contains a Bible and Pilgrim's Progress, and other books are chiefly selected by the sailors themselves. The class of reading called for by the sailors compares favorably with that taken from the public libraries with shore patrons, and the sailors' libraries are, as a rule, as well cared for as in the homes on shore.

The United States navy department has established savings banks on the ships where enlisted men may deposit their earnings, and the results prove, according to the report of the official in charge, that sailors are not, as many suppose, a shiftless class, but, given a chance, will save their money in preference to spending it uselessly. The proportion of men in the navy who have savings in the ships' banks is greater than the average in the mechanical trades ashore.

CHOCOLATE AND COCOA.

THE three cacao products known to commerce are cacao butter, cacao powder and cake chocolate, the manufacture of chocolate requiring skill and knowledge in special degree. The butter is merely the oil or grease of the kernel, usually extracted by pressure, and

leaving a residue still containing a certain amount of vegetable fat, which being ground, is used in making the beverage commonly known as cocoa. When chocolate is intended to be produced, the carefully cleaned kernels are crushed into a mass, flavored and manipulated according to many methods, and then, after an addition of pure cacao butter has been made to the natural content of the mass, it is pressed into small cakes and sold.

The cacao bean is composed in weight of 88 per cent of kernel and husk and 12 per cent of shell. The shells and husks are treated chemically in Holland for the production of a low-grade butter, the reduction being effected by ether or benzine. The kernel, which contains 50 to 55 per cent of oil, was formerly treated, when the extraction of butter was contemplated, by boiling, roasting and crushing in 10 times its weight of water; the oil then rising to the surface was decanted, and the residue pressed mechanically for the elimination of such butter as it still contained. This method has been abandoned, and the kernels, freed from their envelopes, are now ground to a mass, brought to a temperature of from 60 to 70 degrees C., placed in coarse linen sacks, and finally pressed in steam-heated machines. After this first application of pressure the cacao cake contains from 20 to 35 per cent of fat; it is then ground and re-pressed until not more than 15 per cent of the fatty matter remains. The oil or grease which has been extracted is called "cacao butter," which is used chiefly by chocolate manufacturers, and in smaller quantities, in the soap, perfumery and pharmaceutical industries, in which, owing to its neutral qualities, it is especially valuable.—*Selected*.

THE DAYS THAT PASS.

The eager bird, on hurrying wing, is speeding o'er the sea;
No more among the fragrant flowers labors the droning
bee;

The cricket pipes his cheery call among the grass blades
sere;

The woodlands wave their banners gay, the Frost King
shouts: "I'm here!"

It's good-bye to the pulsing life of summer,—it's good-
bye

To joys that blossomed in our hearts beneath a sun-kissed
sky.

It's welcome to the warmth and cheer of firesides all
aglow

With hopes that stir to life beneath the winter's man-
tling snow.

And we whose hearts have met them both,—the promise
and the pain,—

Wait patiently, with hopeful trust, to fare with them again.

—Helen M. Richardson.

"If the saloon is not a benefit to a community either socially, financially or intellectually, why maintain it? If it is a liability and not an asset, why not eliminate it? If it does more injury than good, why tolerate it?"

Historic New England

T. H. FERNALD, BELFAST, MAINE

Chapter II.

NEW ENGLAND originally comprised the territory between the thirty-fourth and forty-fifth degrees of latitude, and extending east and west from the Atlantic to the Pacific Ocean. It was part of what was then called "North Virginia," and was granted by King James I to the Plymouth and London Companies. At present New England comprises the six eastern States of the Union—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, and embraces an area of 65,000 square miles, with a joint population in 1900 of 5,591,952. While the area is less than one-fiftieth of the total area of the United States, the population is nearly one-thirteenth of the entire population of the republic.

The principal occupations of this section are farming, lumbering, and most of the industries found in other parts of the country. Shipbuilding has always been one of the leading pursuits of the people. The inhabitants as a rule are honest, upright, hardy, industrious and thrifty.

Gosnold, master of a small bark, the *Concord*, was the first to make a direct voyage from England to the coast of New England. In 1602 he reached the coast of Maine, explored southward, visiting Cape Elizabeth (Maine) and Cape Cod (Massachusetts), where May 14, a settlement was made. On this voyage Martha's Vineyard and other points were visited. Coming direct from England to Maine he had shortened the route as made by other navigators, about three thousand miles. Taking in a cargo of sassafras-root, which was highly esteemed as a medicine, he returned to publish favorable reports of this vicinity.

Martin Pring who was sent out by several English merchants with two vessels—the *Speedwell* and the *Discoverer*—came to Penobscot Bay in 1603, and explored several harbors and the shores of Maine. He traced the coast of Massachusetts, south to the sassafras region, landing at Martha's Vineyard, and returned to England with cargoes of furs and sassafras.

Capt. Popham was sent out the same year with a colony and made a settlement at the mouth of the Kennebec River (Maine), but they returned home the next year, being discouraged by the severe climate. In 1605 George Weymouth anchored among the islands of the St. George River in Maine, and explored the harbors

and sailed up the river, opening trade with the natives.

The Plymouth Company under the leadership of Capt. John Smith, after making several unsuccessful attempts to settle farther to the southward, examined the coast from Penobscot Bay (Maine) to Cape Cod (Massachusetts), drawing a map and calling the country New England. Smith gave very glowing accounts of the country, enabling the company to obtain a new patent in 1620, under the name of the Council of New England. This patent gave them authority to settle, make necessary laws, and carry on trade over a very large territory from the Atlantic to the Pacific, which comprised over one million square miles. New England was, however, destined to be settled without consent of either king or council.

One stormy day in December, 1620, the *Mayflower* with one hundred pilgrims on board, anchored at Cape Cod harbor. Before landing they gathered in the cabin, and drew up a constitution by which they agreed to enact just and equal laws which all should obey. Following is the compact which was copied from what is claimed to be the original article. The spelling and wording are given exact:

"In the name of God, Amen: We, whose names are underwritten, the loyall subjects of our dread soveraigne, King James, by the grace of God, of Great Britaine, France, and Ireland, King, defenders of the faith, etc., haveing undertaken, for the glorie of God, and advancement of the Christian faith and honour of our king and countrie, a voyage to plant the first colonie in the northern part of Virginia, doe, by these presents, solemnly and mutually, in the presence of God, and one another, covenant and combine ourselves together into a civill body politick, for our better ordering and preservation and furtherance of the ends aforesaid: and, by virtue hearof, to enact, constitute, and frame, such just and equall laws, ordinances, acts, constitutions and offices, from time to time, as shall be thought most meete and convenient for the generall good of the Colonie. Unto which we promise all due submission. In witness whereof we have hereunder subscribed our names, at Cape Codd, the 11th of November, in the year of the reign of our soveraigne lord, King James, of England, France and Ireland, the eighteenth, and of Scotland the fifty-fourth, Anno Domini, 1620."

To this article each person signed his name. An exploring party landed at Plymouth, as it was called on Smith's chart, December 21 (December 11, old style), and found the location suitable for a settlement. The landing was made amid a raging storm of snow and sleet, and they at once began building their rude huts.

The little boat sent out from the *Mayflower* to reconnoitre before the landing was made, after losing rudder, mast and sail, "brings to" in a furious storm of rain, and hail, and sleet, on Saturday night. The morning dawns and time is very precious. Their companions wait in suspense, but the Sabbath must be observed. Cold and wet and weak, with their clothing frozen stiff with the spray from the sea, they carefully dismiss all earthly thoughts, and the time is spent in sacred devotion. There is no wonder that the influence of such a people has been felt throughout the whole land. December 21, and the rock, "Forefathers' Rock," have ever, and will ever be, held in grateful remembrance by their posterity and all the citizens of New England.

The character of these first settlers was well suited to the rugged, stormy land which they were to subdue. Coming into the wilderness with their families, searching for homes, a place where they could educate their children, and worship God as they pleased, they were ever ready to endure the most severe hardships. They were earnest, sober, industrious men, who were actuated in all things by deep religious feelings. Their sufferings were severe during the winter, and by spring nearly half their number had died. In the spring there were many graves, yet not one thought of returning to England.

These Puritans had been known for over fifty years as a separate sect in England. They were called "Dissenters," or "Nonconformists," having left the established church; and on account of their purity of life, had received the nickname of "Puritans." They were readily distinguished by certain peculiarities. Long sermons and prayers were given in their meeting-houses, in tones peculiar to themselves. In naming their children they would often use whole sentences from the Bible, and in their common conversation would use scripture style and phrases. They denounced wigs, veils, flowing sleeves, and other fashions of that day, and the minute events of life were conducted upon formal and precise principles. They were subject to much derision and persecution owing to these singularities and their open rebuke of evil wherever found. This becoming unbearable in England they fled to Holland with their pastor, Rev. John Robinson. But evil influences still surrounded their children, and they longed for a land where they could worship God according to the dictates of their own hearts, and save their children from the follies of this world. Such a home was offered in America, so they came

with the resolve to brave and endure every danger and hardship, "trusting to God to shape their destinies." In Holland the Puritans were ill at ease, although not so badly persecuted. They were strictly English and unfamiliar with the Dutch language, which sounded harshly upon their ears. John Carver and Robt. Cushman were sent as commissioners for the Puritans, before the king and his ministers. They were given encouragement by the Plymouth and London Companies, but the king and his ministers, especially Lord Bacon,

Plymouth Rock and Canopy. Plymouth, Mass.

turned against every measure which might help them. All King James would do was to give them the promise "to let the Puritans alone in America." The commissioners returned with this report, but this people were not to be easily daunted, so they resolved to make a home for themselves in the American wilds. Whether the king gave permission or not they would plant a new state in the new world. Two vessels were provided by contribution and sacrifice, which were the first to carry emigrants from Leyden to Southampton, where the company joined the *Mayflower* with another party from London.

After receiving the parting blessing of their pastor, they put to sea, on the 5th day of August. One vessel being found unfit for the voyage, put back to Plymouth, England, and most of the emigrants gathered on the *Mayflower*. September 6 the first colony of New

England, numbering one hundred and two souls, left old England. After a stormy voyage of sixty-three days Cape Cod was sighted.

Miles Standish, the great soldier of the company, accompanied by some of the braver men, went on shore exploring, but found nothing of value or interest. Being in the midst of a severe storm their clothes were changed to "coats of mail" by snow and sleet, and half by accident and half by the skill of a good pilot, they reached a safe harbor, and on the Monday following landed.

It was midwinter, and many died of hunger, cold and despair. A site for settlement was found near the place of landing and January 9, 1612, these heroic toilers began the foundation of New Plymouth, each man building his own house. The ravages of disease grew worse, and at one time there were only seven men to build houses to shelter them. Provisions were so nearly exhausted that only a few kernels of corn could be given to the starving women and children each day to keep them alive—only five kernels three times a day to each member of the family. But an early spring came, bringing sunshine and gladness, thus saving the colony from utter destruction.

These were a few of the privations and griefs by which New England began its existence. Clams were often their only food. At a social dinner where clams were the only food, the host gave thanks to God who "had given them to suck the abundance of the seas, and of the treasures hid in the sand." They were not disturbed by the Indians. The treaty made when Samoset and Massasoit visited them lasted over fifty years.

In four years the colony numbered 184. All working in common, having failed, each was given a tract of land. Abundance followed.

The colony was never organized by royal charter, and so elected their own officers and made their own laws. Not until ten years after landing did they obtain a grant of the land they occupied, from the council of New England.

IN THE CLEAR OR IN THE FOG, WHICH?

W. O. BECKNER.

ONE evening just about dark, there was a fog settled down upon us. We were out somewhere on the broad Pacific. The compass told us our course and the sextant had given us our latitude. But we had no way of telling where there might be another ship. We knew of none, but there might be those of which we did not know. The watchman was kept in the crow's nest and one on the bridge all the time, on the lookout for anything that might be spied. But the fog was settling down and the watchmen could not see ahead.

The fog whistle was sounded. Then just one minute later it blew again. Then in exactly one minute more

it blew again. And so on until the fog lifted. We were making fifteen miles per hour, one mile in four minutes so that the whistle was sounding every quarter mile.

I went to sleep moralizing that night. It was the first time I had ever heard a fog whistle and the newness of the experience aroused thoughts that may not come to old timers on the sea. Our ship could sail with safety only when in the clear. Many the young man who has launched into a career of business with fog surrounding his ideas of right doing. Many the young person that is allowed to leave the home of father and mother without having clear and clean-cut notions of strict morality. Such get out on the big sea where they have the fogs of temptation thick around them and they are blind to their surroundings. The compass points true and the sextant will not lie, but neither one is of value in the hands of the careless. The only safe way is to keep an ear open for the warning of others. We have heard them say that it is dangerous to tinker with sin and to listen to temptation. But now in the test is where that warning must be heeded or danger becomes a wrecked reality.

It is a dangerous thing for a young person to go out from the care of his parents without having his notions mighty well clarified about certain vital moral questions. If his eye is beclouded and befogged, if he has not put it down in irrevocable terms that he will be a clean man, he is most sure to fall. The temptation comes and it doesn't look so black as he expected at all. Others are doing that thing right along and they would like for him to engage with them. Maybe his early decision was made too hastily and without as much knowledge as he now has. Maybe just as well change those early decisions.

Such is the line of argument presented by the tempter. Young man, in the time of a temptation is no time to change a decision that was made when the mind was free and cool. No, never. Wait till in surroundings where you are free, where there is not the heat and pressure of the presence of others. Wait till you are without associates except your God, then change if you think best. But never change in the midst of temptation. The old saw, "Poor policy to swap horses in the middle of a river," is sound doctrine. Get out of the fog.

Bogo, Cebu, P. I.

DISCONTENT has never injured anyone who has entertained it as a stimulus to action. The American comes nearest to the ideal man in having a multitude of desires which prompt a multitude of activities and lead to the improvement of society, the creation of wealth and the establishment of life on a higher and broader plane.—*Baltimore American*.

NATURE STUDIES

NATURE STUDY.

JOHN H. NOWLAN.

IT was with much interest that I read the articles on Nature Study as told in previous issues of the INGLENOOK.

Many of the readers of these articles are teachers or pupils of the public schools and I have often thought that they might be of mutual benefit to each other.

My idea is this: Let them exchange specimens with each other. The list of articles suitable for exchange is almost unlimited. Seeds, leaves, wood, minerals, shells, etc., could be sent. Nor need the article be a curiosity to you. Recently I asked an intelligent class doing eighth grade work to describe the grain of buckwheat or of a beech nut and not one was able to do so. In exchange for such as these the members of that class would be glad to send things from their locality.

A class near the seashore could send shells, coral, and the like; those in wooded countries woods, barks, leaves, and seeds; from the mountain regions might come various minerals; while the agricultural regions would send the products of their soil and the cities manufactured articles.

By each class making no charge for the articles the only cost would be the postage. Of course the specimens should be so wrapped that the postmasters could inspect them and each article should be marked so that the person receiving it would be able to identify it. Some person should act as secretary for the various classes, or would it be better to call it an exchange? A class not knowing to whom to write could send there for a list of those who are willing to exchange, or better still the list could be published in the Nook as soon as they expressed a willingness to participate. In such an event I am willing for my name to be entered as correspondent for one class.

As an illustration, I at present know of a class making a collection of seeds placing them in bottles holding about one-fourth ounce, another collection of woods about four inches by one-half inch, one of minerals and fossils, and another of products of the sea. Oh, yes, I also know of an industrial collection containing silk in its various stages of manufacture, and other things distinctly urban. This is an agricultural region and in exchange for similar articles to those now on hand we would be glad to send such as are produced here.

If this meets with the approval of the editor send in your names for publication and begin work.

When the list is published select the locality from which you wish specimens, state what you are collecting, what you have to give in exchange, and how large an amount you wish sent. Then only send a small amount of each kind, thus the party to whom you send will get more varieties for the amount of postage.

Mulberry Grove, Ill.

[We are heartily in favor of the exchange planned by the above writer and will gladly publish the name and address of one representative from each school desiring to participate in this plan. We will publish the list of names and addresses once each month during the school year so that a school may join the circle of exchange at any time during the year and have at hand the full list of addresses, or schools, from which he may select those which he believes can contribute to his collections. Discuss this matter with your school at once and send us the name and address of your representative. Let us have a large list for our first month's publication. We already have No. 1 for that list. Who will be No. 2? You can tell us on a postcard.—The Editor.]

ANIMALS AND MUSIC.

MANY of the forest folk are very fond of music, and seem to take as much pleasure in it as we do ourselves. A young blue jay at one time spent two months as a guest in my home. We all know what harsh voices the jays have. Did any one ever hear one sing a sweet tuneful little song, I wonder? While the small jay lived with me it was my custom to practice singing for half an hour every morning. No sooner had I seated myself at the piano and struck a few chords than "J-J" hopped over the doorsill and settled himself on the rung of a near-by chair. He listened with rapt attention, and after a few days he tried a bit of song himself. At first I had to stop and laugh, his performance was so amusing; but after a few weeks' practice he could sing very sweetly—not exactly the tunes he heard, but little ones that he made up as he went along. If any noises pleased him, he began to sing. A heavy thunder shower or the whirr of the sewing machine always moved him to express his delight in song.

More than two hundred years ago a young violinist,

Isidore Berthaume, was obliged to practice on his violin many hours daily. One day he saw a spider peeping at him from its crack in the wall. Soon it ventured forth, and every day it grew a little bolder, drawn irresistibly by the sweet sounds which issued from Isidore's fiddle. At last one day the boy had the great pleasure of seeing the spider take its place on his bow arm. Presently his stepmother, coming into the room and seeing the spider, killed it with a blow of her slipper. The death of his pet was such a blow to the boy that he fell fainting to the floor, and was ill for three months afterwards.

When the great herds of cattle on the plains become restless, the cowboys sing them to sleep, and often prevent a stampede in that way. They say that the steers are especially fond of "My Bonnie," "Lorena," and "The Cowboy's Lament."

Squirrels and mice are ardent music lovers. Dr. Chomet tells us that one day while strolling in the woods he sang an air from an Italian opera, and, chancing to look around, he saw a number of squirrels, all listening with delight to his song. The next time you take a woodland ramble try singing a few songs, or, if you play a flute or fiddle, play a few tunes, and see what effect it has upon your little forest friends.—*Nashville Visitor*.

A SNAKE CHARMER AS DENTIST.

PERHAPS you cannot fancy anyone being brave enough to pull out a snake's tooth, but in India, where there are many different kinds of snakes, some whose bite is so poisonous as to cause death within twelve hours, the snake charmers have to be snake dentists as well; and very clever and quick they are about it, as you may imagine when you think how dangerous and slippery a patient they have to do with. The snake's poison-bag, which is really his weapon of defense, is at the back of his jaw next to his last tooth, and as long as that is there the snake is so dangerous that even a snake charmer cannot make friends with him.

The snake charmer first sets to work by finding out the hole where a snake lives, and in front of this he plays on a musical instrument rather like a humming-

top, which sounds like a bagpipe, having first put an earthenware pot, with something dainty to eat in it, at the mouth of the hole, to tempt the snake to go into the pot. On hearing this music the snake comes out, and finds his way into the pot, the mouth of which is about as large as a breakfast cup; then the snake charmer quickly throws a cloth over the mouth and ties it down.

We once offered a snake charmer a present if he would take out a cobra's poison-bag before us. One morning, therefore, he arrived with a friend, carrying a pot with a cobra inside. This is one of the most poisonous, as well as the prettiest snakes in India. When angry it raises its body about a foot high, and the top of its head spreads out like a hood, on which there is marked a pair of yellow spectacles.

The man began his work by turning over the pot on the ground, then loosening the covering, which was pulled gently away. One of the men then gently shook the pot, taking care to leave a very small opening, through which the cobra's tail appeared, and which the snake charmer seized with his left hand. He then began slowly pulling out the snake with his right hand, while he moved his hand up the whole length of its body till he planted his thumb firmly on its head by way of pinning that to the ground, the other man being careful to raise the pot only enough to allow of its body being slowly pulled out.

This man then held its tail and body while the snake charmer lifted its upper lip and lanced its gum with a sail needle. He then took a fowl's feather and drew it through the cut, and doubled it over, giving it a pull, when out came a small bag in the shape of an India rubber hot-water bottle, about the size of a little finger nail. This was the terrible poison-bag. The snake was then let go to crawl about quite harmless, and it would remain so, I believe, for a few months till the poison-bag grew again.

We kept this bag for some time in spirits of wine; it looked as if made of gelatine, and the poison inside like glycerine. After this interesting operation we, and not the patient, paid the dentist's fee.—*Selected*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WHY should I observe Thanksgiving?

HAVING respect for other people's opinions doesn't mean that you are to swallow their opinions whole. You need not accept them at all. But whether you accept them or not, do some thinking for yourself and never adopt the views of anyone without giving them the careful weighing that will make them really your own.

WE are glad to be able to give our readers the excellent article on the life of Mark Hopkins which appears in this issue. Few men have attained to the high distinction gained by this noble man as a teacher and educator. Our own humble spheres and our daily tasks take on a new significance viewed in the light of what he accomplished, and we take courage.

Do not fail to read the plan suggested for an exchange by John H. Nowlan in the Nature Study department. The idea is to increase the nature study collections of classes in the public schools by exchanging material with classes in other parts of the country. Increased value to the work and increased interest in the subject are sure to result from a number taking part in the plan and we trust that it will be taken up at once by all our readers who are interested in the subject. If you are not in school or do not belong to a class but are making an individual collection, you are free to send in your name and address and call upon others and be called upon for exchanges.

THANKSGIVING.

THANKSGIVING DAY has come to be so fully taken up with sports and the gratification of a perverted sense of pleasure that it is to be feared it will soon lose its real meaning. To be sure, a thankful heart

may mean a merry heart, and an expression of thankfulness may take the form of bountiful meals and pleasant social intercourse. But while these are not inconsistent with Thanksgiving Day, they should not be engaged in for the mere gratification of the senses but with the real meaning of the day in mind. Eating a bountiful meal should recall the source of such bounties and in the same manner everything engaged in that is a blessing to us should be followed back until we come very close to the munificent Hand that has cared for us so well and we feel ourselves humbled to the dust with a sense of gratitude and of our unworthiness.

Of course if one talks very much on Thanksgiving Day about being thankful the cold water pouter is likely to tell him there are no more reasons for being thankful on this particular day than on any other day—that one ought to be thankful every day in the year—every day ought to be a thanksgiving day. This is true indeed. But do not let the admission decrease your earnestness or cool your enthusiasm. If you are sincere and thorough in the matter of finding your actual position today as a needy pensioner of innumerable bounties, your attitude will be so completely changed that all the days that follow will find the grateful spirit warm in us and easily quickened to the degree that makes a thanksgiving day.

"STAY ON THE FARM."

WHILE stopping off at Jackson, Miss., in his tour through the States, President Taft addressed a body of people largely made up of those actively engaged, or at least interested, in the profession of farming. During the course of his speech he took the opportunity of adding his voice to the growing chorus going up from our statesmen, ministers, and social reform workers, urging our country boys and girls and men and women to "stay on the farm."

Here are some of the things the President said on the subject of farming:

"I am glad to be in a State in which agriculture is your chief trade and occupation. We must admit that the occupation of the farmer is among the one or two most important occupations that go to make this country great—and a State which is great because of it is entitled to recognition as typifying Americanism in the highest degree.

"We have arrived at a time in the development of this country and the world when old methods of agriculture must be discarded if we would keep up with the profession. Land is becoming too valuable to treat it in the old wasteful way. The profession of the farmer has become a real scientific profession.

"In Mississippi you have been able to restrain the tendency of young men, laborers and others, to come into the cities and live in tenements, in order that they

may be where the wheels go round. The truth is, if I were advising a young man in this country as to his future profession I should say to him that there was probably greater opportunity for real reward in assiduity, industry, attention to business and scientific investigation in the profession of agriculture than in any other profession this country affords.

"The tendency toward the country and country life is a tendency that we ought to encourage. It tends toward sane, philosophical and quiet consideration of the problems of life. It takes out that nervous exhaustion of energy; it takes out the gambling spirit; it takes out of the life of the citizen that hurry and rapidity that carries men quickly to the grave, and it makes for the happiness of individuals and families far more than any trade or profession that brings you into the great maelstrom of city life."

We are sure that these words of the President and the words of other wise and unprejudiced men to the same effect will have an influence toward checking the movement of the country population toward the cities. But more than any other influence toward keeping for the country its own is the condition of affairs now existing in which the farmer finds himself in the front ranks of the money-making class. In no other peaceful period of our country's history has the tiller of the soil received such large returns for his labor as at present. This, indeed, is not the best and most far-reaching argument for country life, but nevertheless it is *the* argument that counts with the American people. This, and the improved machinery and the conditions that call for intelligence, wisdom and wide-awakeness are the forces that will bind the country population to the fields of their fathers and to their fathers' occupation.

SOME NOTED BOYS WHO BEGAN WORK EARLY IN LIFE.

As a general proposition, the boys of this world who became men began work very early in life. They had no lazy bones in them, and as soon as they had the strength and knowledge to do something helpful they wished to be up and at it.

At six years of age Benjamin Franklin was dipping molds for candles. He wrote in his after life: "It was uncommonly hard work for my age, but it kept me busy and I was content with it."

At the same age, Elias Howe, who was to give the sewing machine to the world, was sticking wire teeth through leather straps used for carding cotton. He earned the first money for his education in that manner. At six Peter Cooper, one of the greatest philanthropists the nation has known, began earning money by pulling hair from rabbit skins.

John Ericsson, who invented the monitor type of fighting ship, from which the modern submarine boat

has been evolved, before he was eleven years old, with a file, gimlet and jackknife as his only tools, had made a miniature sawmill. It was a marvel of ingenuity. He used an old watchspring for a saw blade, while a broken bit of tin spoon turned the crank.

Thomas Edison was a newsboy on the trains when he was twelve years old. During the hours when he was not on duty he fitted up a small laboratory in the corner of a baggage car and there made his earliest experiments. He was reading and digesting at the same time that ponderous but valuable work, Fresenius' "Qualitative Analysis."

Philip D. Armour and George M. Pullman, afterwards to become great factors in the world of work and invention, were plowboys at ten years of age, each working hard on a New York farm. The Stanford brothers started their business careers at six years of age digging horse-radish and selling it. They also scoured the woods for chestnuts and made quite a revenue out of the sale of these.

M. M. Atwater says of this kind of boys, the boys who must be working because work is good: "It is in the red blooded youth of healthy and animal spirits and cheerful, buoyant optimism that our interest lies—the boy who works to help his people at home, who works to buy a suit of clothes, who works to be able to spend a little money and to save a little.

"For the boy who has begun to feel that there is no place for him in this world, who has the false notion that everybody is against him, who thinks that 'luck' and not industry can send him ahead, there is no better cure than hard work. It is the best medicine he can take into his system."—*Glenwood Boy*.

WE THANK THEE LORD!

We thank thee, Lord, for spring's glad hours,
For summer's sunshine, birds and flowers,
Full harvests, and good cheer;
For autumn's rainbow hues and glow,
And winter's mantle white of snow—
For blessings through the year!
For food and raiment and increase
Of harvest plenty, and for peace;
For pleasure, joy and grief;
For toil and pain, for care and loss,
For sleep, for strength to bear life's cross,
For kind and glad relief—
For liberty and Fatherland,
For a united household band,
For all our needs supplied;
Oh, God, our Father, we today
Give thanks for all; and thee we pray
With us still to abide!

—Henry Coyle, in Independent.

"ALL God's love in the past calls for our loyalty in the present."

"A CROOKED life cannot lead on the straight way."

THE HOME WORLD

WASHING AND IRONING

ELIZABETH D. ROSENBERGER

"COME in, and do excuse the dusty sitting room. We have been ironing all day and were too tired to do anything more."

"You look tired, of all things, ironing always worries me the most; if I ever get a headache it is on ironing day," said Mrs. Stahl.

"In this age of inventions, why, oh, why can't we find some easier way to get our clothes clean and ready to wear again?" queried Mrs. Boulton. "Now we are too tired to be pleasant this evening; I really believe the family dreads ironing day as much as I do; you see the sitting room is not as homey looking as usual and we all feel it."

"I suppose if it was something that men had to do instead of women, we'd have had a machine for it long ago; but as it is, we have to do it ourselves."

"I have tried hiring some of it," continued Mrs. Boulton, "and inevitably I find that the towels and sheets are beautifully done, but my shirtwaists and baby's dresses were not fit to wear; I had to wash and iron them over again before we could wear them."

"Well, all I can say," answered Mrs. Stahl with an air of finality, touching in its helplessness, "is, it beats me."

Mrs. Boulton laughed. "The only thing I am thankful for, is that the entire week is not taken up with washing and ironing, two days is bad enough."

Perhaps that is the reason we see so little about laundry work in the magazines which print exhaustive articles on cooking and dressmaking. The editors recognize the fact that the subject is distasteful to their readers, and they have so little to offer in the way of helpful suggestions. And yet we see that it is one of the vexing problems in domestic economy which is never solved satisfactorily where the housekeeper does all the work. The weekly wash-day has its terrors in the average family. Some—but their number is very limited—do not hate washing and ironing. The average housekeeper dreads the two days out of every seven when the clothes of the family are being

washed and ironed. It interferes so with the little home pleasures; meals are stinted and hurriedly eaten, because the washing must be put out as early as possible. Or because, as was the case of Mrs. Boulton, those who ironed are too tired and have a headache, perhaps they are irritable too.

Then suppose under an accumulation of circumstances you put off washing for a week, see what occurs. The undusted sitting room calls forth no complaint, the supply of jelly may run low unnoticed, different other little household tasks may be slighted without any perceptible ripple on the domestic sea. But let the washing go, and there is not a day in which some member of the family will not plaintively inquire, "Mother, I need my white dress to wear this afternoon, and now here it has never been washed!" You explain that she may wear some other dress. "But the white one would be so much more suitable," is the response. When you have succeeded in convincing her that another dress can be substituted for the white one, the boy inquires for a colored shirt. No difference if your children are well supplied with clothes, they usually want something that is not washed, and you resolve never again to put off washing-day. Cooking, washing and mending are three things which apparently brook no delay.

Many girls get no practical experience in laundry work. Then when they encounter some of the difficulties which come in the natural course of events to most housewives, they learn how to do up fine nainsooks and linens by sore and sharp endeavor, often at the expense of the fabrics themselves. They have to learn to distinguish between the fabrics which require but little rubbing and those which can be washed by anybody and *look* right after the process. Every girl should have a course in fine laundry work; it will save her much trouble as well as wear and tear on clothes; then she can supervise the washing and secure the best results.

We women, whose work is never done, have a way of going doggedly about it, never sparing ourselves until we tire out, then we grow desperate and careless and let things take care of themselves in any haphazard fashion. Now if we stop to think, there is really no sense in doing things by the hardest, when there is—as there almost always is—an easy way. But we are forced to admit that there is less chance to improve our methods of washing and ironing than almost anything you think of. There is an easy way of doing hard work and we may find that way for wash-day. A boy gave this definition of hard work: "It is anything you don't want to do." There you have one cause for the difficulty on Monday morning,—we hate to think of washing and we dislike to put the wash boiler on the stove. Good soap and washing machines aid the washerwoman; just the same there is a sigh of relief when the clothes are all clean again. Electric irons are a convenience, and lighten the labor somewhat. A mangle which will smooth all towels and flat pieces without the application of heat, and with a minimum of strength and time does something toward mitigating the situation on ironing day. However, if we do not enjoy wash-day and its privileges we can console ourselves with the reflection that we are doing our share of the world's work; and we enjoy the results of our labors. Meanwhile we hope that inventors will turn their attention to lightening the labor of washing and ironing.

WOMANLY WASTEFULNESS.

THERE are no persons more economical or more wasteful than women. The most valuable possession that a woman has, is time, and this is frequently most sadly wasted. Says Elizabeth Cummings: "I am convinced that at least *one quarter* of the work performed by women is unnecessary, and that the world would get on quite as well without it. It is like the ottoman cover I once saw a lady working. She was all bent up, and was putting her eyes out counting stitches. 'I don't get any time for reading,' she said plaintively, as she picked up some beads on a needle. 'You must have a great deal of leisure.' But yet she had spent more time embroidering a ridiculous dog on a piece of broadcloth, than would have sufficed to read twenty good books. It did not have the poor merit of being economical, for the price of the material would have bought enough handsome damask for two covers. The meanest work that makes home a lovely, sacred place, is consecrated, and fit for the hands of a queen; but delicate work that ministers to no human need, even if it has artistic merit to recommend it, if it consumes the hours a woman ought to use in training her mind to think, and her eyes to see, is busy idleness and a waste of time. I hope the day will come when every woman

who can read will be ashamed of the 'Columns for the Ladies' printed in some of our papers, and which tell with more sarcastic emphasis than any words of mine how some women choose to spend their leisure. Surely if they have time to follow intricate directions for making all sorts of trimming, not so good as that sold in the shops for two cents a yard, they may, if they will, find a few moments in which to read a book."

It is a painful sight to see women squandering their precious time on such miserable trumpery, and wasting their lives on needless and worse than useless frivolities. And this same wastefulness is visible in various departments of household life. Women who cannot find time to read the Word of God, will pore over a library of well-thumbed cookbooks and occupy whole hours in compounding and cooking indescribable mixtures of fanciful and unhealthful food, killing themselves cooking what other people kill themselves by eating.

Trouble came into this world by a woman's tempting a man to *eat*; and the practice has been pretty thoroughly kept up. Men supplied with plain wholesome food are quite sure to eat all that is for their good; and more, without urging; but if in addition to the force of their natural appetite, the women devote their energy and skill to compounding and preparing tempting articles of food, and then coaxing them to eat them, they are quite likely to yield to the snares that are spread before them and become gluttonous and dyspeptic. All such useless work occupies the time, exhausts the strength, and wastes the energies that might be devoted to the good of humanity and the glory of God. An old lady once said to the writer, that when she was young she could cook for a family of a dozen as easily as she could for a family of three now, when there were so many different dishes to be prepared. Gluttony is one of the sins of the age, and while multitudes are pining for daily bread, Christian people are contriving to see how much money they can spend, how much material they can use, how much time they can waste in tempting persons to eat what they do not need, and in stimulating jaded appetites, which need nothing so much as plain living, fasting and prayer, and as a result of their luxury they derange their digestive organs and ruin their health, so that probably ten persons die of overeating where one dies for want of food. The poor also ape these miserable fashions, and the means which would supply them abundantly with wholesome food, are squandered on nicknacks and ill-cooked luxuries, until means are exhausted, and destitution stares them in the face.

Our Lord Jesus warns his people against "surfeiting," or *overeating*; saying, "Take heed to yourselves, lest at any time your hearts be overcharged with surfeiting, and drunkenness, and cares of this life, and so that day come upon you unawares." Luke 21:34.

The days before the flood were days of gluttony and intemperance. They ate, they drank, they bought, they sold, "and knew not until the flood came, and took them all away." At the foundation of the sins of Sodom lay luxury, "pride, fullness of bread, and abundance of idleness." Ezek. 16:49. And in the gluttonous habits of the present day may be found the root of the temptations to sensuality and sin which overcome so many.

Women are almost universally overworked, but if they would omit the *useless work* they do, the rest could be performed with a reasonable expenditure of strength. But all the appliances and conveniences of modern life fail to give woman the rest she desires. Much of the work done by woman's hands in the days gone by is now done by machinery. The spinning wheel and the hand-loom have given place to the powerful machinery of the factories, and the sewing machine has relieved the weary needle-woman of much of her work; but though a sewing machine will take twenty stitches while a woman can take one, it sometimes happens that they put twenty times as many stitches into their clothing as they did before, and so gain nothing by the improvement. Thank God there are some whose hearts are devoted to higher things, who follow the example of Dorcas of old,—the only woman who was brought back from the grave, and whose life was lengthened out to bless the church and the world; and who will not waste their energies upon trifling things while humanity suffers and souls are perishing around them—*H. L. Hastings, in The Common People.*

A FRIENDLY NEIGHBOR.

"I JUST ran over for a spoonful of baking powder. No, indeed, I haven't a minute to stop, so it is no use to ask me to sit down. I had everything ready to bake a cake, when I happened to remember that my yeast-powder was out. I was sure that you had some, though; you are so thoughtful, and keep a supply of such things on hand. Now as to me—why I can never think of half I shall need when the grocer's boy comes for the order, and—oh, dear!

"Why, I haven't sugar enough for that cake! Now, I declare, if that isn't just like the goose I am. So you will please let me have two cupfuls of sugar and a small piece of butter, say about half a pound. My butter man never comes until afternoon, and I always like to bake in the morning.

"Why, now! there is another thing I had nearly forgotten—eggs. Well, if it were not for you I am sure that I could never get along. So you may let me have, say, about six eggs. You see I had everything ready for that cake, when I happened to think I was out of one thing or another, and I was sure that I could depend upon you. I was saying to John only yester-

day, that it was such a comfort to have a neighbor whom you could ask to let you have a trifle once in a while, and—

"Yes, yes, I had clean forgotten about the flour. Just let me have a quart or so, will you? It is always best to have plenty of flour, don't you think? When I got everything ready to bake and the oven was nice and hot, I remembered that I was out of a good-sized cake-pan—no use to run to the store for everything, is it? So I will have to trouble you for that nice one you bought last week. It is a beauty.

"You can put the few little things I mentioned in it, after you have put them in separate paper sacks. They will be more convenient for me to carry that way.

"I believe that I shall let my children come over and play at your house, as it is too damp to play outside; I can get on with my work so much better when they are out of the way. Well, I'll just run along now and bake my cake, as I have everything ready and the oven is just right."—*Renice Radcliffe, in Farm Journal.*

SALTED ALMONDS.

If you wish to have your almonds
The daintiest in town,
Just try this way of making them
An even, golden brown!

First drop in boiling water,
A minute let them stand,
Then turn on the cold water,
Rub off the skins by hand.

In white of egg half beaten
Roll each one carefully,
Then salt and put in oven
To crisp them thoroughly.

Occasionally stir them 'round
And you will soon espy
The nuts turning a creamy brown
Well crisped and yet not dry.

—St. Nicholas.

SELECTED HELPS FOR THE LAUNDRY.

TAKE a piece of tallow candle, melt it, and dip the spotted part of the linen that has been stained with ink in the melted tallow, then put it into the wash. It will become perfectly white, without any spot or hole. This is better than milk, spirits of salts, or salts of lemon.

To make washing fluid use one pound unslacked lime, ten cents' worth of soda ash, and two gallons of water. Mix and let stand until settled. Use one cupful to a wash boiler of water in boiling clothes. Will neither fade nor injure the finest fabrics and is inexpensive, costing less than fifteen cents and lasting for many washings.

After laundering Battenberg pieces, which you have

made, pin the pattern on which they were worked to a rug, and then pin each piece to its own pattern, having first dampened it as for ironing. There will be no puckering of the linen center and each piece will be as perfect in shape as when first made.

When ironing take an old tin pie plate, turn upside down on the gas burner, and you will be surprised to see how little gas is required and how clean and smooth your irons are.

The Children's Corner

WHY "UNCLE HERBERT" GAVE THANKS.

T. H. FERNALD.

"UNCLE HERBERT," as he was called by the people of the village, came from the far West over twenty years ago, and was, as far as any one knew, alone in the world. He was a very cheerful man, and loved children dearly. He occupied a little one-story building on a twenty-foot lot where he lived and sold magazines, papers, toys, candy, nuts, fruits, and small useful articles for the house.

This building contained only three rooms,—the large front one, where he had his little store, containing long counters for his goods, at the rear of which were his living room and bedroom. His only companion was a beautiful white cat which he called "Tabby."

Having only himself to care for, he had laid by a neat little sum of money, but was by no means a miser, as all the children of the village and even for many miles around could testify. His genial smile and generosity had made him a general favorite with both young and old.

Thanksgiving was near and Uncle Herbert had decided that as God had been so good to him and had prospered him, he would make some poor boy happy by giving him a job in his store, and would pay him \$3.00 a week, and board. So the evening before Thanksgiving he printed a large card—"Boy Wanted"—and put it in his window, after which he locked the door and went in to prepare supper.

The living room was very clean and cheerful. There was a rag carpet upon the floor, a little round table in the center covered with a bright damask tablecloth, several chairs, including three rockers, and a large lamp with a beautiful shade which cast a cheerful and mellow light upon the other articles in the room. While he trotted back and forth preparing his meal, talking to Tabby, he heard a knocking at the door of his shop. He was not in the habit of opening his shop door at that time of the day, but something prompted him to go and see what it was.

As he unlocked and opened the door, the snow blew

into the room, and he partly closed it, and asked, "Who is there?"

A child's voice answered, but it was so faint that he could not distinguish what it said, so he hurriedly opened the door, and there stood before him in the raging storm, a little girl bearing in her arms a baby closely wrapped in a blanket. This sight touched Uncle Herbert's heart, and he at once brought them inside.

"Why are you out in such a storm as this?" asked Uncle Herbert, pleasantly. "You wanted a boy and so I thought I would bring my little brother," said the girl.

"Yes," said he laughing heartily, "but I wanted one to help in the store. But I'll tell you what we will do—just come into the back room and we will have supper and talk the matter over."

After they were comfortably situated beside the cheerful fire Uncle Herbert said: "What is your name, my dear?"

"Gretchen Gaylord and brother's is Ernest."

"Where are your parents?" said he, becoming greatly interested in these little ones.

"Mother died only two weeks ago, and father was killed in a railroad accident only six months before. I am too small to work as mama did, as I am only twelve years old. You said you wanted a boy and I thought Ernest might do. He is awful good, and don't cry much. May I come and see him sometimes?"

Tears were now falling fast from little Gretchen's eyes, and there was a telltale something in Uncle Herbert's eyes.

By way of changing the subject he said, after clearing his throat several times: "Well, now, we are forgetting all about supper. Come, my little man, if you are to be my boy, you must sit upon my knee and drink milk from this beautiful cup."

It was a merry supper; the Indian pudding and milk never tasted better to Uncle Herbert than it did now, and the children had never tasted anything better.

Little by little their story was told by Gretchen. They were alone—Uncle Herbert was alone; so it is not strange that the customers at the store saw the next day and for many days after, a quiet, bright-faced little girl waiting upon them, while a light-haired, bright-eyed baby toddled about making friends of all.

"Have found some of your people, have you, Uncle Herbert?" people would ask, and his only reply would be a nod of the head, while his face beamed with such happiness that all congratulated him, and left the store feeling that they had received some of the good.

It is not necessary to state that Thanksgiving at the little store was observed in an appropriate manner, with thanks to God, and a nice dinner for Gretchen and Ernest, and a lot of good things for all the children of the village. Uncle Herbert did not forget the poor, but sent them all a good dinner.

THE QUIET HOUR

THINK AND THANK.

A Thanksgiving Message by Richard Braunstein.

"Bless the Lord, O my soul, and forget not all his benefits."—Psa. 103: 2.

"THINK and Thank," was the motto on the family crest of Sir Moses Montefiore, the lamented philanthropist. Indeed, the two words, differing only in one vowel, have the same derivation. In the old Anglo-Saxon, thankfulness means *thinkfulness*; the thinking recalling our blessings in such a way as to be moved by gratitude.

I. We are prone to forget God's benefits. We have excellent memories for all our trials and sorrows and losses, but fail to recall our blessings. It seems that the very abundance of God's favors and their ever-unbroken flow tend to make us all the more forgetful of the Giver of them all. But it is our duty to remember, to be thankful. It seems that we could be more ready to count our mercies, to consider the blessings we have, instead of complaining of things we seem to lack. A man of very good circumstances once said: "I look at what I have not and think myself unhappy; others look at what I have, and count me happy." Why not reckon up a few of the things we have and be thankful? To recall our blessings, to add up only a few of our mercies, would awaken the voice of thanksgiving from many a silent soul.

Saadi, the Persian poet, whose words breathe a wisdom and kindness, not unlike that of inspiration, informs us that he never complained of his condition but once,—when his feet were bare, and he had no money to buy shoes; but meeting with a man *without feet*, he instantly became contented with his lot and thankful for his mercies.

Carlyle has somewhere said that every man should put himself at zero, and then reckon every degree ascending from that point as an occasion for thanks. That is the true standard. Precisely on this scale does the Bible compute our mercies. Demerit places us at the very nadir. Every step we take from the point where conscious unworthiness would consign us, should call for our offering of gratitude.

II. *When we recall our blessings, how much occasion we find for thankfulness.*

It is simply because we are not more *thankful* that we are not more thankful. If we *think* we cannot but

thank. With only a little effort to recall our blessings we would soon find ourselves ready to adopt the words of the Psalmist and say, "How many are thy gracious thoughts of me, O Lord! How great is the sum of them! When I count them they are more in number than the sand."

We have read of a father, who, one winter's night, was walking along, hurrying toward home, with his little daughter at his side. Suddenly she said to him, "Father, I am going to count the stars." By and by he heard her counting—"two hundred and twenty-three, two hundred and twenty-four. Oh, dear," she added, "I had no idea there were so many!"

Christian people, have you never said with your soul, "Now Master, I am going to count thy benefits," and soon found your heart sighing, not with sorrow, but burdened with goodness, and you saying to yourself, "I had no idea that there were so many?"

Count your mercies. At this thanksgiving season, think, and then thank. Thank God for your home, a Christian home. Thank him for your parents, your children. Thank him for the family, that blessed institution out of which grow all other good institutions. Thank him if your family has not been invaded by death, thank him for the memory of the loved ones, if they have been taken away. Thank him for the goodness that made you a son, native or adopted, of this land most favored by his smiles. For blessings, temporal and blessings spiritual, for blessings personal, family and national, for such multitudinous blessings that when you attempt to count them, you find them more in number than the stars in the heavens, or the sands upon the sea shores—for them all thank him who is the Giver of them all. *Think* and as you *think* "*in everything give thanks.*"

THE WAY TO GOD.

MARTHA SHEPARD LIPPINCOTT.

Love illumines all the world
With a radiance divine,
And through it our Father's face,
With benignant light will shine.
Love the motive power is
To uplift men's souls to God,
It was through its holy paths
That our blessed Savior trod;

Teaching men the way to live,
 Feeling a sweet brotherhood,
 So that we might cease to do
 Aught but what was true and good.
 He desired us to love all
 And cast selfishness aside.
 It were better for mankind
 Were his teaching always tried.

Philadelphia, Pa.

"THE OLD PATHS."

A MUCH-USED, and, we might say, much abused expression, is this "up-to-date." We hear of "up-to-date preachers," "up-to-date churches" and "up-to-date services, music, sermons and religion," and again for the sake of rarity the changes are rung in "The Twentieth Century" and "for the times," and the limit of nonsense is almost reached in the ridiculous aphorism, "A Twentieth Century Gospel." Are we to understand by this that the human heart is so far gone in unrighteousness that the old remedies have lost their virtues and force, or does it mean that humanity is so much better than of old times that contrition and conversion are no longer necessary? Do we then need a newfangled church, Gospel and religion to suit this generation and century? How refreshing to sing occasionally F. W. Faber's noble hymn, "Faith of our fathers living still."

Do we not need to preach with much earnestness, "Contend for the faith once and for all delivered unto his people"? It is said that "history repeats itself," and it seems that in the days of Jeremiah the people desired the same kind of novelties in religion, for he exhorts them to "stand in the way and see and ask for the old paths, where is the good way, and walk therein. and you shall find rest for your souls." There is no new way for rest of soul, the development of Christian character, the favor of God, and the joys of heaven, but the old way which our fathers and mothers trod and gloriously reached through faith and prayer, obedience and by sacrificing service of God. The old paths of salvation, joyful living and triumphant dying are by the way of Mt. Zion and the Decalogue, Calvary and the Cross, repentance for sin and faith in the atonement of Christ.

The medicine for the moral diseases of the twentieth century is a bold and unhesitating preaching of the doctrines of the Bible as it has come down to us from the fathers, and as presented by them with holy fervor as in the days of the past. Like sin and error, which are both ancient and modern, is the truth of the Gospel, old, and yet always new. No matter what this age may want, it needs the old doctrines of faith and obedience. In all the history of the world there has never been any spread of the Gospel, the reformation of nations, the conversion of souls, or any successful evangelistic work among men, except by the old-fashioned, distinct doctrines, as preached by the early Christians.

The old paths that will lead to revivals of religion in these as in former times are the following: Faithful, parental instruction, family worship in spirit and in truth, regular attendance of the means of grace by parents and children, the earnest anointed preaching of the whole Gospel, the loving coöperation, the intelligent and tactful heart-to-heart work of members, and this not spasmodic and periodical only, but systematic and continued.—*Selected.*

IS HOLINESS OUT OF DATE?

WRITING under the above caption the *Sunday-school Times* says:

"It may be questioned whether the bustling minister or Christian worker with his finger in a dozen pies, diplomat, politician, reformer, sociologist, man of affairs, errand boy, is altogether so much more admirable in God's sight than the still saint in his cell on his knees in mystic contemplation of his Lord. He certainly is not if he has not found time and strength in his busy life to immerse himself in the presence and Spirit of God, day by day. For what men need supremely is neither politics, civic reform, Sunday schools, soup kitchens, or sociology; it is to come into touch with the living God. Our very service will otherwise degenerate into a new Pharisaism, more hopeless in its snug self-satisfaction, and inner deadness than the old. And the fountains of all this beneficence to man will dry up unless they are fed from the deep sources of the life of God, which never yet found their way into human hearts except through channels dug deep by prayer and aspiration and passionate seeking after God. We want that word back in our vocabulary, filled with the modern meaning, but not missing the old high sweetness. It is God's word and we must not lose it. Out-of-date holiness is out of date, of course; but with all our philanthropy, reform, beneficence, practicality, we need a profounder life, hid with Christ in God, speaking forth on the housetops what is heard in the closets, supreme consecration, deepest communion, translated into whole, hearty human living, the living, working holiness of Jesus Christ."

No, holiness will never be out of date. Scriptural terms may be misused and little understood, but the one essential for the church is *holiness*. It is not necessary to repair to a mystic cell to obtain it, neither is it necessary to leave the earth in order to live it. Through consecration to God and faith in the all-cleansing blood of Christ, we may walk before him in the beauty of holiness right here on earth.—*Selected.*

"WHEN we set out to suggest to our brother how he shall mend his ways, we are surely called upon to approach the matter in a spirit of humility and not of superiority."

ECHOES FROM EVERYWHERE

The exports of domestic products from the United States for the month of October last increased \$21,000,000 over the exports of the same month in the preceding year. The value of exports in October of this year was \$123,643,720.

It is reported that a series of wireless telegraph stations are to be installed in Siberia which will enable the War Department of Russia to keep in communication with the easternmost parts of the empire. These stations are to be large enough to operate over a radius of a thousand miles.

Rice forms the chief cereal food of about one-half the world's population and wheat the chief cereal food of the other half. Curiously enough, the quantity of these two cereals produced apparently differs but little, the latest estimate placing the world's rice crop at about 175,000,000,000 pounds and the wheat crop at about 190,000,000,000 pounds.

Because across the American flag which floated from the peak of the Roosevelt were the words "North Pole," commander Robert E. Peary will be prosecuted. Charges of desecrating the flag have been instituted in the New York supreme court by Attorney Roswell R. Moss, historian of Newton Battle chapter, Sons of the American Revolution.

Prof. Metchnikoff, says the Scientific American, advocates the drinking of much fermented milk to check the intestinal putrefaction of food, and thus prolong life. In furtherance of his end, bonbons have been prepared, consisting of a lactic-acid product surrounded by a sweetened chocolate coating. The sugar of the coating assists in lactic-acid fermentation.

The demand for structural steel for next year already exceeds the capacity of existing mills by about 2,500,000 tons, according to operatives at Pittsburg. The West and Southwest and making unexpected demands on the manufacturers, and although plans are now complete for increasing the capacity of the mills by 200,000 tons a month, it is feared that even this output will not be sufficiently large.

It is stated at Washington by close friends of the administration that in his message to Congress the President will advise amending the interstate commerce act so as to extend its scope to include restricting the issues of bonds and stock of railroads, empowering the interstate commerce commission to suspend a rate until it has time to investigate its fairness, authorizing the commission to act on its own initiative without waiting for complaints and creating an interstate commerce court which will pass on appealed cases involving the decision of the interstate commerce commission.

"Red Cross stamps" will be put on sale in all parts of Illinois on Thanksgiving Day. The stamps are sold to raise money to fight tuberculosis. The distribution will be made by the Illinois branch of the Red Cross through the Chicago Tuberculosis Institution, 158 Adams Street, and will continue until after the holidays. The stamps will be on sale in department stores, hotels and other public places for use during the holiday season on letters and packages sent through the mails.

St. Louis merchants are in receipt of fine rice grown in Arkansas in the Grand Prairie country. Sample bags are being sent all over the United States and even to Europe by the Cotton Belt railroad. Arkansas rice grades 60 per cent higher than any other rice while the yield is 25 bushels more per acre than that grown elsewhere, it is claimed. This year the Grand Prairie section will raise about 1,750,000 bushels which means an income for this new section of from \$1,250,000 to \$1,500,000.

The Socialists have made heavy gains in the diet elections in several of the German states. This result is regarded as a popular protest against the recent increases in taxation and a consequence of the rapid shifting of population from the rural districts to the big industrial centers, where the socialistic propaganda thrives. Numerically, the Socialists are now the strongest party in Germany, but as there are several other parties, they do not wield the balance of power.

Canadian dairymen have discovered what was no doubt an unintentional "joker" in the new U. S. tariff law. The old duty on cream going into the United States worked out at five cents a pound, but the new duty is only five cents a gallon, while the duty on butter is six cents a pound. The Canadian creameries therefore are now taking advantage of this loophole in the tariff and shipping quantities of rich cream over the border at the low rate, instead of making it into butter and paying the higher rate.

New York, Nov. 14.—Reports of enormous damage by flood, hurricane and earth tremors continue to come in from the West Indies. Hundreds of thousands of dollars' worth of property has been ruined and the death list may be large when complete information comes from the interior of the islands. Hayti, where violent earth disturbances are reported, and Santo Domingo, caught the brunt of the gale and the unprecedented rains. Hayti reports very heavy damage and some deaths at Port de Paix and Gonaives. Kingston, Jamaica, has registered 48 inches of rainfall since the storm began last Friday and the property damage to that city alone is estimated at half a million. Railroads have been wrecked and shipping blown ashore throughout the West Indies.

A campaign intended to make Denver a dry city was launched Nov. 8 at a meeting of prominent clergymen. The question will be submitted to the voters next spring. The originators of the movement express great hope of the outcome, as women will vote. One speaker declared that should the women of Denver fail to join and support the movement the women of no other State in the union will be able to get suffrage for twenty years.

Members of the Missouri State board of prison inspectors have decided to raise the price of convict labor from 60 to 70 cents a day. New contracts are to be awarded January 1, and an effort will be made to interest manufacturers in bidding for the services of prisoners. The State furnishes the contractors with guards, buildings, shafting, light, power, etc., and also feeds the prisoners. About 1,750 convicts are now employed at 60 cents a day.

Nearly 300 women attending the Southern Methodist home mission conference for the St. Louis district have pledged themselves to work and talk for the introduction of the Bible in the public schools of that city. The pledge followed the delivering of an address before the conference on "Christian Education, the Basis of Good Citizenship." It was made clear before the pledge was signed that the women were not advocating the introduction of creeds into the public school system, but were only asking "that the moral principles about which there can be no doctrinal discussion," should be taught.

At a conference with President Taft in connection with the Glavis charges, Secretary Ballinger demanded the retirement of Gifford Pinchot, chief forester. It is expected Ballinger will further reply to the charges in the Alaskan coal land cases. Mr. Pinchot will not resign at Ballinger's dictation. He will only quit when Taft dismisses him. Mr. Pinchot is many times a millionaire, cares nothing for the salary of the office, but is anxious to see the Roosevelt policy of conservation carried out. He ridicules the report that he is part of a cabal to discredit Taft and pave the way for the renomination and election of Roosevelt in 1912.

That breakfast food concerns, interested in driving corn products from the market, are responsible for the recent widespread belief that pellagra is caused by eating corn, and that there is ground to believe this theory, is the statement of Dr. Harvey Dillon of the Louisiana State board of health before the Southern Medical association recently. Most of the doctors agree that there is no ground for believing corn produces pellagra. Dr. G. C. Savage, of Nashville, president of the association, disputes the corn theory. He says the disease is caused by a germ which has not yet been discovered, and believes it is highly contagious.

A virulent outbreak of cholera at Simferopol has driven the Russian royal family from the imperial estate at Lividia and hurried them north to St. Petersburg. Thirty-five deaths have already been recorded in Simferopol and the authorities have little hope of checking the cholera outbreak before it spreads to the entire Crimean province. Because of the presence of the royal family in the vicinity, the sanitary department made an unprecedented effort to stamp out the disease in its incipency. They have been unable, however, to impress the inhabitants of the Crimean villages with the seriousness of the situation and an enormous death roll is expected before the plague passes.

Strange as it may seem to the uninitiated, the cost of operating an electric car depends to a large extent on the motorman. The economical motorman will permit his car to coast whenever possible and in this way will effect a considerable saving of power. Each application of the brakes means a waste of power. Recently an apparatus has been devised for keeping a record of the periods of coasting of different cars. The device is connected both with the electrical controller and with the air brakes and operates only when both the controlling apparatus and the brakes are in the "off" position. The record is made on a paper ribbon driven by a clock. This record makes it possible to judge of the relative economy of different motormen operating on the same line and encourages them to let the cars coast whenever it is possible to do so without falling behind their schedule.

On the first day of next year 1,765 employes of the New York Central railroad will begin drawing pensions. Plans to this end have just been completed by the directors of the road. Two classes of employes are to be pensioned, namely those who have reached the age of 70 years and who have been continuously in the service for 10 or more years and those who have been continuously in the service for 20 years. The scale of pensions is to be 1 per cent for each continuous year of service, based on the average rate of pay received by the pensioner during the ten years preceding retirement. When the system is fully operating it is estimated that its cost to the railroad will be about \$500,000 a year. It is expected that 100,000 employes will eventually be benefited. The plan is to be immediately extended to the Big Four, Boston and Albany and other subsidiary lines of the New York Central. The pensions will be awarded by a special board.

By a vote of 397 to 149 the history-making tax-increase bill which has so long been the chief topic in England was passed by the house of commons. The "government," as represented by Premier Asquith and his cabinet, are greatly pleased at this hearty support of a tax program which is so revolutionary. It now remains for the house of lords to say whether it will also approve this program, or bring a deluge of popular wrath upon its head by vetoing it. In England the upper house of parliament is not expected to oppose any measure which the lower house really insists on; the lords want to kill the new tax budget but probably dare not. Premier Asquith in a speech declared inasmuch as more revenue was needed, the taxes must be increased, and that it was a choice between this bill and a tariff. He dared Arthur Balfour, the opposition leader, to propose a tariff measure. Heavier taxes on the persons most able to pay was the only thing open, said he.

The government has just concluded an interesting and important series of experiments to demonstrate the comparative values of gasoline and alcohol as fuel for generating power. It is found that a gallon of denatured alcohol can be found to do the same amount of work in an engine as a gallon of gasoline. Moreover, the alcohol does not produce smoke and is less liable to yield obnoxious odors, but the lower price of gasoline makes it the cheaper fuel. Where the restrictions placed on the use of denatured alcohol are less stringent than those placed on the use of gasoline or where safety and cleanliness are important requisites the advantages to be gained by the use of alcohol engines in place of gasoline engines may overbalance a considerable increase in the fuel expense. This is so if the cost of fuel is but a small portion of the total expense involved.

Among the Magazines

INVESTIGATE THOROUGHLY BEFORE GIVING.

The first essential to wise giving is a realization by the giver of his fallibility and the limitations of his knowledge, writes John M. Glenn, secretary of the Sage Foundation Fund in *The Delineator* for December. To give by intuition or on partial information is neither humane nor beneficial. Nowhere is it truer that knowledge is power. Gifts based merely on belief in the worthiness of a cause and in the sincerity of its agents are often harmful. There should invariably be a thorough investigation of every proposed beneficiary.

To know whether an enterprise should be aided, the field of its operation must be searched to find out the real needs of its territory and of its proposed beneficiaries; if a real need is found, whether there is any other agency that is supplying that need; whether its aims will satisfy that need. Its proposed methods of operation must be scrutinized and compared with similar undertakings elsewhere to determine whether they will probably bring good results.

The quality and capacity of its governing body and of its officials must be known. Have they sound judgment? Do they realize the extent of the responsibility and opportunity their undertaking offers? Are they capable of putting good plans into effective operation? Are they giving the necessary thought and attention to secure steady progress?

Thorough investigation is a great help to those who require financial aid. No enterprise is so well managed that it can not learn from intelligent persons who view it from the outside. A few well-directed questions, tactfully put, may open up a vista of opportunity not seen in the steady course of daily pressure of work. Friendly investigation is evidence of sympathy, and welcomed most by the most efficient. Nothing is more educational.

WAR CHIEFS ON ALCOHOLISM.

The fearless attitude of General Grant in reply to liquor critics and his participation in Chicago's temperance demonstration has provoked widespread editorial comment and discussion. A characteristic editorial opinion appears in the *Nashville Tennessean* Oct. 4 in these words: "By attempting to humiliate General Grant for participating in the great law enforcement parade in Chicago the saloon power made a fatal error. Rebuffed by General Grant and made ridiculous by the ruling of Secretary Dickinson, the Chicago liquor crowd stands before the world snubbed and discredited. Its foolish attempt to force support from government sources revealed the weakness of its position more truly than a thousand speeches by temperance orators."

Military Leaders Agree with General Grant.

A leading article in the *Chicago Tribune* Oct. 17, writ-

ten by the well known correspondent "Ex-Attache," declares that "among those who think like General Fred D. Grant are Field Marshal Lord Wolseley, his brother field marshal, Lord Kitchener, and most of the generals who have served under the latter in Egypt, South Africa and in India, Admiral Lord Charles Beresford and many another military and naval commander of equal note and standing."

Continuing, the *Chicago Tribune* correspondent shows a remarkable change in the military attitude toward the use of liquors during the past few years. Referring to British progress toward a military basis of complete total abstinence, "Ex-Attache" says:

"When one remembers how devoted the Englishman is to his beer, the Scotchman to his 'mountain dew' and the Irishman to his poteen, modern history abounding in the upset of British cabinets ill advised enough to attempt to increase the tax on these stimulants, which are regarded not as luxuries, but as actual necessities of life, the boldness and likewise the difficulty of Lord Kitchener's innovation will be appreciated. But his scheme more than fulfilled all his expectations. Thanks to total abstinence, the men were able to make forced marches of the most extraordinary character across the burning desert and under a blazing sun, the heat of whose rays can only be appreciated by those who have lived under the equator.

Liquor Tricks Soon Thwarted.

"All kinds of devices and tricks were resorted to in the earlier stages of the famous Sudan campaign of Lord Kitchener," continues the *Tribune* story. "One wily Greek liquor dealer even managed, no one knows exactly how, to get several wagon loads of spirits up beyond Wady Halfa for the purpose of retailing them to the officers and men of the expedition. But fortunately Kitchener obtained an inkling of the affair, captured the convoy and caused every bottle and barrel to be mercilessly destroyed, the liquor merely serving to poison the sand and to slake the thirst of the ever parched desert."

On sea and land alike the demand of military competition has driven out alcohol, and "in order to slake the thirst engendered by the heat, exertion and smoke inseparable from a naval combat supplies of oatmeal and water for drinking are arranged all over the British man-of-war," states "Ex-Attache."

"Today," concludes this remarkable *Tribune* discussion, "three maritime powers surpass all others in the matter of naval gunnery—Great Britain, the United States and Japan," and, knowing the strenuous total abstinence regulations now in force by these three nations, "may we not assume," it asks, "that the superiority of English, American and Japanese naval gunnery is attributable to the total abstinence encouraged or enforced?"

Pointing out the fact that the "modern warship is the most complicated piece of machinery in existence" and that "the slightest mistake might result in an appalling

catastrophe, with the destruction of the lives of all the crew of 600 or 800 men, "Ex-Attache" says:

"Men who have to shoulder this burden do not dare to drink. The risk is too appalling. That is why inebriety, formerly treated with relative indulgence, is now punished with such great severity in the American and English navies and why drinking has gone out of fashion among naval men."

THREE PEACE FORCES.

There are three great forces in our civilization, each of which, more potent here than elsewhere in the world, voices for international peace, and government of and by the people will heed those voices. First, the business interests. Nowhere are there more varied and larger business enterprises carried on than in the United States. Our merchants sweep the entire horizon of the world in their pursuit of business. Our manufacturing industries, some of them gigantic in extension, search the whole realm of industry in the furtherance of their work. The inventor and the mechanical engineer are very busy devising new methods of toil, new machines, for accomplishing more and better work. Over eight hundred thousand patents for new and useful inventions have been issued from the Patent Office at Washington. The means of locomotion and the facilities for communication are extending in every direction. We have more miles of railroad than any other nation in the world and almost as many as all other nations put together. Mountains are no barrier, rivers do not stay their course. Now all these interests look askance at the prospect of war. They dread the destruction of property and business. They hate to see the efforts of the brainy turned away from the furtherance of these interests into devising additional means of killing and sowing the land with the seeds of destruction. When Mr. Carnegie said that if any controversy arose between Great Britain and the United States it could be entrusted to the merchants of London and New York, who would settle it peacefully and with honor to both nations, he expressed the longing and faith of all business interests, and may be looked upon as seer and prophet.

Second, the laborers. The great mass of the American people are toilers, and their votes determine the policy of the government, for it is a government of and by the people. In England the labor party pressed upon the government the consideration of a limitation of armament, and the government, obedient thereto, dared not withhold presenting the matter to the recent Hague Conference. Mr. Kier Hardie, the leader of that party in Parliament, in a recent address in this country, declared that the laborers of the world were all opposed to war and demanded that all difficulties between nations should be settled by arbitration. The toilers see that war means the waste and destruction of property. They know that it takes life, that the army is drawn from their numbers, and that their homes are drained to fill the cemeteries of the battlefield. They also realize full well that the cost of armies and of war is enormous; that that cost is made good by taxes, and they are beginning to appreciate more and more the fact that they pay the bulk of the taxes. They see the great nations of the Old World piling up from year to year and from decade to decade an ever-increasing burden of debt, and they also perceive that this country (which during thirty years had paid off two-thirds of the debt created by the Civil War) has since then for military armament and naval display not only ceased to reduce, but has practically ceased all efforts at

reduction. They are weighing the earnest words of Secretary Root, when, appealing to the South American States for a closer union, he declared:

"Let us pledge ourselves to aid one another in the full performance of the duty to humanity which that accepted declaration implies, so that in time the weakest and most unfortunate of our republics may come to march with equal step by the side of the stronger and more fortunate. Let us help one another to show that for all the races of men the liberty for which we have fought and labored is the twin sister of justice and peace. Let us unite in creating and maintaining and making effective an all American public opinion, whose power shall influence international conduct and prevent international wrong, and narrow the causes of war, and forever preserve our free lands from the burdens of such armaments as are massed behind the frontiers of Europe, and bring us ever nearer to the perfection of ordered liberty. So shall come security and prosperity, production and trade, wealth, learning, the arts, and happiness for all."

It is a startling commentary on these words and these efforts of Secretary Root that, impelled by the action of this nation in building up a navy, Brazil and Argentine have lately commenced the enlargement of theirs and decline to enter into an agreement to stop the increase at a certain limit.

The laborers, as all others, know that debt piled up for a navy is just as heavy a burden as a debt piled up for an army. They know that while the stock gamblers of New York may water stock there is no power that can water a debt—not even a debt for a navy. It remains a constant burden, whose interest is an annual drain, and whose principal stands in the way of those works of peace which will promote the happiness and comfort of all. We hear from them already in the declarations of their organized bodies that arbitration must be the rule, that international peace must be the object, and that military and naval armaments must stop their growth. Nowhere in the world is the toiler such a power in the government. Nowhere is he such an intelligent force, so fully understanding the curse and cost of war, and his opposition will grow more and more emphatic until every lawgiver hears and heeds.

Third, woman. I am not now speaking as champion or prophet of female suffrage. I note only the fact that the last half century has changed her position. She is no longer a purely home body, but has entered largely into public life. Whether voting or not, she has become an active and vigorous force in the national life. Her patriotism is as certain and as strong as that of her brother, and whenever the need comes, although she may not shoulder the musket or draw the sword, she does all that is possible to ameliorate the hardships of war. The Red Cross is her work and her glory, and the noble bands of women who are giving their time and strength to increasing its efficiency and extending the reach of its influence are among the heroines of the nation. But while all this is true, you need no assurance that her voice is and always will be potent for peace. No mother nurses her baby boy and rears him to manhood without dread that his life may in its prime be cut off by the merciless bullet. She looks forward to old age in the hope and faith that that boy, in the vigor and strength of manhood, will be her comfort, support and glory. There never was a time since the beginning of days that woman longed for bloodshed or the carnage of war, and the more fully she realizes its waste and destruction the more earnest will become her opposition. Nowhere in the world is she so potent a force in public life as in this country, and you may be sure

that that force will be ere long concentrated in steadfast opposition to war and in favor of the settlement of international disputes by arbitration. She cannot be sneered or laughed out of her faith, and he who looks for public recognition in this country will do well to take note of this fact.

These are three great forces in the life of this nation, and as they unite in the effort for arbitration and international peace, they will compel the public men of the day to heed their demands.

I believe in the promises of Scripture, that his word shall not return unto him void, but shall accomplish that which he pleases and shall prosper in the thing whereto he hath sent it; that the time will come when the swords shall be beaten into plowshares and the spears into pruninghooks, and when men shall learn war no more forever.

With the eye of faith I see unrolled on the canvas of the future a glorious picture, in which shall be seen every laborer dwelling beneath his own vine and fig tree, receiving ever a living wage for his toil, every merchant and manufacturer pursuing his business and his industry without a thought of interruption by the ravages of war, and men of science and wealth combining in the achievement of more and more gigantic results, adding not merely to the necessities, but also to the comforts and luxuries of life, taking possession of land and water and air, and all the forces to be found in them, and making them minister to human life. In the foreground will be seen that highest type of womanhood, the Madonna, and across her bosom will be these words: "Mary hath kept all these things, and hath pondered them in her heart"; while underneath will shine in letters of fadeless light, "The United States of America has fulfilled its mission."—Hon. David J. Brewer, Associate Justice of the Supreme Court of the United States, in *Advocate of Peace*.

LUXURY AND LUCKY FARMERS.

A news item which perhaps did not attract general attention, but which must be regarded with concern by every thoughtful observer, was the explanation of the present high price and prospective prohibitive price of butter. The reason given was that the farmer was now too rich to milk his cows. This sounds plausible. Naturally enough, the first task a farmer would omit would be milking. Every story of the early life of a great man of rural origin begins with the matter of fact statement that he used to rise at 3 A. M. and milk the cows. Now, rising at 3 A. M. is irksome, that is, to a rich man especially—take note of this change in rural conditions—especially to a rich man who has been riding in his automobile most of the night before, after the present habit of our farmers.

Perhaps we can stand the rise in the price of butter due to the spread of luxury among farmers. It is only one more commodity that is higher. But where is this tendency to stop? Now the luxurious farmer ceases milking. What duty will he next find interfering with his comfort? Here he is growing richer and richer each year. You have only to read the impressive figures of Secretary Wilson, showing how his crops are worth \$8,000,000,000 or so annually to imagine his rapid strides into the forefront of the leisure class. His

ubiquitous automobile is only a symptom of the prosperity that eight new billions each year spell. His swelling bank account, his strongbox full of railroad stocks, his daughter being "finished" in Paris—these are, all of them, the marks of a man who can afford to be fastidious about the work he does and the hours he keeps.

Now, there must be other farm duties that the plutocrats of the plow meditate cutting off when Secretary Wilson's next \$8,000,000,000 is counted up and collected. Hoeing corn and potatoes, picking berries and gathering up the sheaves of wheat under glaring July suns are assuredly tasks which cannot altogether please a rich man's fancy. Indeed, we could mention a hundred duties in a farmer's life which, if he has begun by ceasing to milk his cows because he is too prosperous, he would naturally stop doing as his wealth piled up year after year. It is the habit of man to increase his leisure as his means increase, and when wealth multiplies at the thumping rate of \$8,000,000,000 a year great and rapid changes in the ways of life will naturally ensue. We used to rejoice over that \$8,000,000,000, over the automobiles, over the bank accounts and all the other signs of wealth rivaling that of Ormus and of Ind. . But now they are positively alarming. What if the farmer, as he grows richer and richer, should stop farming altogether? Something must be done and done at once to teach the idle rich on the farms that it is their duty to keep on milking.—*New York Tribune*.

Between Whiles

Warning Her.—A deaf but pious English lady, visiting a small country town in Scotland, went to church armed with an ear-trumpet. The elders had never seen one, and viewed it with suspicion and uneasiness. After a short consultation one of them went up to the lady, just before the opening of the services, and, wagging his finger at her warningly, whispered, "One toot, and ye're oot."—*Christian Register*.

Sir Colin Campbell, when in India, wrote in an official report: "A lot of young fellows come out and they drink and eat and die, and then write home and tell their friends the climate killed them."

Painless Punishment.—One day a dentist had occasion to punish his 5-year-old son for disobedience. As he picked up the rod the little fellow said: "Papa, won't you please give me gas first?"—*Chicago Daily News*.

"LOYALTY and enthusiasm pay the additional wages that are earned by undivided effort and thought."

Song Books Free

We have completed arrangements whereby we are enabled to make an unusual offer to churches, Sunday Schools, or societies in need of a first class, all round Song Book.

FINEST OF THE WHEAT NO. 3.

is a collection of over 250 songs gleaned from the great harvest field of Gospel songs. A book that will give entire satisfaction. Highly commended by Sunday-school choristers and leaders of evangelistic services. Contains a large number of new songs and a few of the old standard church hymns. The book also contains the "Ten Commandments," "Lord's Prayer," and more than a score of carefully selected scriptures for use as responsive reading. Printed in round notes only.

SIX COPIES ABSOLUTELY FREE.

with each and every dozen books ordered. In other words, if you buy one hundred copies of "Finest of the Wheat No. 3" in cloth covers at the regular price of 25c each, we will give you an additional 50 copies, same binding without cost. This offer does not apply on orders of less than one dozen copies. Of course you are to pay carriage on the entire shipment. This is your opportunity to secure a supply of song-books at very little cost. We reserve the right to withdraw this offer without notice.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA, IDAHO, OF SEPT. 30, 1909.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Scam, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

CALIFORNIA HOMES

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. California appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"The Alfalfa shown above was cut five times this season, as follows, May 20, yield 8 tons, July 1, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.

J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.

C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, rates for homeseekers.

Read and Learn

OF THE

Great Future for Miami Valley

in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

FARMERS DEVELOPMENT COMPANY
Springer, New Mexico.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.
"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.
"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

J. MILLER & CO., Smithville, Ohio.

NEFF'S CORNER

If my plans as now fixed are realized, myself, wife and babies will be sitting in the sunshine of perpetual summer ere these lines appear in print. We expect to be busy, but never so much so but that, with plenty of help available, we can do more. One brother who has bought land in Mexico wants a number of acres cleared at once and sown to alfalfa. Some will want their land planted to corn, some cotton, some garbanzas, some sugar cane, some bananas, some oranges or other fruit, and my part of it will be to employ native help and oversee this work of improvement and cultivation. In fact one of the conditions that makes farming operations so very profitable in Mexico is the cheap labor there. Good hands can be had at 45 cents per day, they boarding themselves. This being the case, many will buy land in Mexico (are doing so, in fact) and have it farmed for the handsome income it brings, and others with a view of going to it after it has been brought into a good state of cultivation. By making a down payment of \$6.25 per acre for the land and investing a small sum in improvements investors realize a good income from their land in a very short time. The land can be bought in tracts of ten acres or more. For further information address:

JAMES M. NEFF,
Apartado 65 Culiacan, Sinaloa, Mexico.

A Wonderful Success

BATTLE OF THE MISSISSINEWA

PROFESSOR OTHO WINGER, MANCHESTER COLLEGE

IN the early history of our country there were many unfortunate struggles with the Indians. Only a few of these have been given much notice by the historians. Some are of little historical importance, but are full of interest to those who are far removed from the scenes of that savage strife. One of these battles was that of the Mississinewa. It was second in importance only to Tippecanoe in the conquest of Indiana.

The battle occurred on Dec. 18, 1812. The causes were as follows: In June of that year war had been declared against Great Britain. A few weeks later General William Hull ignominiously surrendered Detroit, and with it much of the Northwest Territory passed into the hands of the British and Indians. Steps were immediately taken looking toward the recovery of the lost territory. This task was entrusted to General W. H. Harrison, who had won the famous victory at Tippecanoe the previous year.

How to deal with the Indians was a most serious question. A general peace had been declared after Wayne's victory in 1794, but now the red men were again in arms, urged on by the great warrior, Tecumseh, and his prophet brother. These two had planned a general uprising of the western tribes but had suffered a great defeat at Tippecanoe. Among the Indians that sided with Great Britain in the war of 1812 was a Miami tribe living in what are now Grant, Wabash and Miami Counties, Indiana. They had taken part in various marauding expeditions and attacks on frontier forts. It was plain that no safe advance could be made against Detroit until these Miami Indians had been crippled so as to curb their activity.

This work was assigned to Colonel John Campbell, who was given a large portion of General Harrison's army, which was then stationed at Greenville, Ohio. The expedition proceeded into the Indian country unnoticed until they reached a point on the Mississinewa River about seven miles northwest of Marion, Ind.

Here they came upon one of the enemy's towns, which they took without opposition, killing several warriors and taking many prisoners. They continued down the river several miles and burned other villages, which had been deserted upon the approach of the Americans. Having thus destroyed the base of supplies, they returned to the first village and encamped for the night. A well-formed camp was arranged; and well was it too, for the Indians were planning vengeance. On the next morning, one hour before daybreak, the Indian warwhoop was given and three hundred braves rushed to the attack. The Americans were taken by surprise but soon recovered their bearings and held the ground. When daylight came a cavalry charge drove the Indians in flight. The American loss was eight killed and many wounded; the Indian loss was very much larger.

Colonel Campbell's army now began its return march to Greenville. It was not altogether unlike Napoleon's retreat from his victory at Moscow. It was biting, cold December weather. Behind them lay the burned villages, while they marched through an inhospitable territory. When Greenville was reached, over three hundred had been frost-bitten and rendered unfit for service.

One of the braves who distinguished himself in this battle was destined to be a prominent character in Indiana for two generations. This was Me-shin-gome-sia, son of Me-to-cin-yah, grandson of A-taw-ataw, and great-grandson of Osandish. Me-shin-gome-sia had nine brothers, whose names I will give you if you will pronounce them: Ta-con-saw, Mack-quack-que-nun-goh, Shop-on-do-she-ah, Wa-pe-si-taw, Me-tack-quack-quah, So-lin-jes-yah, Wa-can-con-aw, Po-kung-e-yah, and We-cop-e-me-wah.

Me-shin-gome-sia was born about 1782. About 1815 he married Tack-a-quah, daughter of So-a-nah-ke-kah. After the death of his father, he became the chief of his people and was highly respected until his

death in 1878. In that year death reaped a heavy harvest by garnering in the chieftain and many of his friends. A few of his descendants survived him, but these are now rapidly disappearing. The writer's first three years' experience in teaching school was among this interesting people. The old Indian school-house stood upon a hill in sight of the battle-ground. Every eighteenth of December these children would listen with eagerness to the story of that struggle of long ago.

Recently interest has been revived in the battle of the Mississinewa by a notable gathering that took place on August 29 of this year when fully ten thousand people met on the old battle-ground. Distinguished speakers were present; also many Indians, among them two veterans of nearly a century's age. The sounds of war were silent, feelings of hatred unthought of while white and red men, in a friendly spirit, repeated the story of the struggle of their fathers. Steps were also taken looking toward urging Congress to establish a national park at the battle-ground, whose location on

the Mississinewa is very picturesque; also to have an appropriate monument erected to mark the site of the conflict.

The traces of the red men are fast disappearing. Another generation will know the Miami Indians only from the stories of others. They cannot stand against increasing civilization, or, shame to say, against the greed and unprincipled schemes of white men. As one Indian put it, in explaining how they lost their land, "Indian can't trade with white man." Their land is gone from their possession and soon they will be no more; not fully either, for all know the truth of the poet's observation:

"You say they all have passed away,
That noble race and brave,
That their light canoes have vanished
From off the crested wave,
That 'mid the forests where they roamed
You do not hear their shout;
But their names are on your waters
And you cannot blot them out."

GIVE THE BOY A CHANCE

JOHN H. NOWLAN

MUCH has been written about keeping the boy on the farm and recently one writer gave an article on "Keeping the Old Man on the Farm." With so much on the subject it may seem a little superfluous for me to add any more, yet I am constrained to offer a few thoughts on the subject.

Last but not least of the products of the farm we will consider the boy.

Why does he desire to leave the farm? Let us look at his environments. What are they? The girls have the choice of rooms and he takes what they do not want, because he is only a boy and anything is supposed to do for that class of animals.

He sees the boy from town better dressed, and with better social and educational advantages. He hears people, even in his own home, make discrediting comparisons between the two classes of boys and, though he says nothing, in his heart he secretly rebels.

About the first of March the boots that served him for school are in bad condition, yet he must wear them, as leather is dear. As he places his wet socks by the stove at night he looks forward to the time when he may wear better shoes and not be compelled to trudge through the mud.

When summer comes he gets no new ones but must plow barefoot, sometimes around hedges.

When time to hoe comes the hired man and the boy

are sent to the same field to work together. One of the hoes is a new light one, while the other is dull, rusty, and has a rough, massive handle. The hired man is being paid for his work, so he must have good tools to work with, while the other will do for the boy. And yet the boy is expected to hoe as many rows as the hired man and do the work as well as he.

As with the hoes, so with the cultivators when corn plowing time comes. Equal skill is expected of each, though the hired man is twenty-five years old, and the boy is fourteen.

When a load of coal, etc., is needed from the village the hired man is sent. If the boy asks to be allowed to go instead he is told that the hired man works hard—is the best hand ever on the farm, and, if not treated properly, at the expiration of his term may not renew his contract. Or it may be he is informed that the hand is not to be trusted to work without a boss and the boy can. Does this make the boy feel like continuing to put forth his best efforts when his only reward is more work?

Saturday night the hired man disappears not to reappear till Monday. The boy gets no holiday save to go to the country church occasionally, after having been enjoined to be home in time for the noon chores, as no one else will be there to do them.

He is only fourteen yet through the entire season he

"made a hand" at the threshing machine, and you boasted that you had to hire no help as the boy "changed" enough work to do all of yours.

Did you speak a kind word to him? No, but you gave him *fifty cents*! Yet you wonder why he does not take more interest in the farm work.

Boy wonders (aloud) why you do not have the hired man do more of the rough jobs and he is informed that he can't be spared—the hired man is not so necessary. Do you wonder that the boy looks longingly forward to the time when he too may leave at will?

Last fall you gave him a corner to sow to wheat to have for his own. What was the yield? About thirty bushels. What did the boy do with it? You needed it! Were you honest? He is your boy and you can do as you please. Be careful! You claim to be a Christian and yet you have broken your promise. What influence will that have on his future?

He has a liking for school and you promised him to allow him to start to school early in the term if he would work well during the summer. With this in view he worked faithfully, even when ill, in order that he might not be called a shirk. When did he start? About the middle of November. Why not sooner? The corn had to be husked? You knew corn husking time was coming, so why did you promise? Thought he didn't care, as he said nothing. If he were your neighbor and you dealt thus with him would he consider you honest? Would he have grounds for legal action?

And you wondered why he showed no more interest when you promised to send him to college some day!

Be careful what you promise him and then be careful to keep that promise.

When he does good work tell him so—don't think it is enough to tell him when he does poor work.

If you expect him to be a successful farmer begin now to let him exercise his judgment and do not wait till he goes to work for himself. Teach him how to do all the work on the farm and let him operate every machine.

Don't tell about your boyhood days, of your holidays and how you enjoyed them, and then leave him to draw comparisons between you and grandfather.

Treat him as though he were a rational being—as well as you do the hired man. Be honest and just, and see if you are not able to keep him on the farm after his twenty-first birthday.

Mulberry Grove, Ill.

A NEW SCHOOL FOR FARMERS.

SHOULD the taking of the census of 1910 be conducted strictly along the broad lines already marked out for it, one of the incidental results will be to establish a course of practical business training for farmers which promises large and substantial results.

One fault of many, perhaps of a majority, of our farmers, is that they do little or no bookkeeping. As a rule the farmer who sits down to reckon up the results of his year's work has to base his calculations upon facts drawn from memory or from records which are incomplete as well as unbusinesslike and untrustworthy.

The government, through the mechanism of the census bureau, seeks to abolish this slipshod system of farm accounting and persuade farmers to replace it with definite business forms like those used in other extensive enterprises. The change, it is pointed out, would be valuable not only to the farmer himself, but to the government. The farmer who at the end of the season is unable to present a clear, comprehensive statement of the year's work, setting forth in detail the financial operations of his industry, is not a successful farmer in the broad sense of the term, no matter how abundant his crops, herds and other ventures. His affairs lack the careful, methodical accounting which he expects of the bank in which he deposits his money and which he requires of the men he elects to office at the county seat. He would immediately and properly withdraw his funds from a bank incapable of making a clearer statement of its financial operations for the year than he could make of his own.

The government wants the farmer to exercise a practical business supervision over his own affairs, and to that end it has asked him to be ready in 1910 to give the census takers certain definite information based upon written records kept by himself with reference to his operations in 1909. He will be asked for a statement of the acreage, yield and selling price of all crops harvested this year, together with the value of his live stock, dairy products, poultry, eggs, fruit, etc. In addition, he will be called upon for an inventory of all live stock, poultry and bees on hand April 15, 1910. The government will ask how much money he paid out for fertilizers in 1909, how much he paid for farm labor, what amount he paid for hay, grain or other articles not raised on the farm, but purchased for feed for domestic animals and poultry, what acreage he planted for each staple in 1909 and what acreage he intends to plant for each in 1910, the number and value of animals sold in 1909; the number and value of animals slaughtered on the farm, either for home use or for sale, the number and value of wool fleece sold, the quantity of milk and of butter in pounds produced, and a comprehensive statement of mortgaged indebtedness, etc.—*New York Mail*.

DRUNKENNESS is not only the cause of crime, but it is crime; and if any encourage drunkenness for the sake of the profit derived from the sale of drink, they are guilty of a form of moral assassination as criminal as any that has ever been practiced by the bravos of any country or age.—*John Ruskin*.

Historic New England

T. H. FERNALD, BELFAST, MAINE

Chapter III.

CHARLES ENDICOTT and his associates were granted a royal charter in 1629, and all rights were transferred to the Colony. Puritans from all sections came to this land, in large numbers. Soon Salem, Charlestown, Dorchester, Watertown, and Boston were founded.

The first thing to be done was to see how the Indians would treat the settlers, and Capt. Miles Standish was sent out to gather the desired information. The New England army consisted of only six men beside the general. Deserted wigwams were found; smoke from campfires arose in the distance; savages were occasionally seen in the forest, but they fled upon seeing the English, and Standish marched back to Plymouth unmolested.

Shortly after Standish's adventure, Samoset, sachem of the Wampanoags, came into the village of Plymouth, offered his hand and gave the settlers a welcome. Having been with the whites at different times since the landing of the earliest voyagers, he spoke broken English. He told them of the number and strength of his people, and how a few years before the country had been swept by a plague, and many of his people had died, to which malady—which had destroyed their fathers—he attributed the feeble and dispirited condition of the red man at that time.

They were soon after visited and welcomed by Squanto, an Indian who had been on shipboard with Hunt in 1614, and could speak good English. Squanto confirmed all that had been said by Samoset. Massasoit, great sachem of the Wampanoags, came in early spring with a treaty which lasted fifty years. This compact was very simple, providing that "no injury should be done by white men to the Indians or by the Indians to the whites," and that "all offenders and criminals should be given up by either party for punishment according to the laws and usages of the two people." This treaty was entered into by nine of the leading tribes, who acknowledged, according to their understanding, the rule of the King of England. Some sachems grew suspicious and hostile, and at one time Standish was obliged to lead out his soldiers against them. Gov. Bradford received a bundle of arrows wrapped in a rattlesnake's skin, from Canonicus; the governor filled the skin with powder and balls and returned it as an answer, to Canonicus, who refused to

receive it, sending it on from tribe to tribe until it was finally returned to the governor—an unaccepted challenge.

The first year at Plymouth was unfruitful, the colonists being brought to the point of starvation. Others arriving without supplies made the situation worse. These remained with the Pilgrims during the winter; then in the early spring crossed to the south side of Boston harbor and laid the foundation of Weymouth, but not being prosperous—instead of honest labor they tried to live by dishonest trade with the Indians—and being at the point of starvation, they abandoned their settlement and returned to England.

The third year—1623—brought a bountiful harvest to the people of Plymouth. The Indians brought in the products of the hunt, which they exchanged for corn. John Robinson made an attempt to bring the main body of the Pilgrims who had remained at Leyden, to America, but the London adventurers who had the management of the enterprise, would not furnish either the money or transportation, and at the end of the fourth year New England contained only one hundred and eighty white persons.

John White, a minister of the Puritans, at Dorchester, England, led a party who settled at Cape Ann in 1624. After two years the whole party moved southward, where they founded Salem, having found the first situation unfavorable. Two years later John Endicott arrived with his company, and was appointed governor. King Charles I granted this company a patent and the settlement was incorporated under the name of the governor and company of Massachusetts Bay in New England. Immigrants to the number of two hundred arrived the same summer, some settling at Plymouth, and some at the peninsula on the north side of Boston Harbor where they laid the foundation of Charlestown.

In 1630 about three hundred of the leading Puritan families in England came to America, led by John Winthrop, who was chosen governor. He chose to suffer with the Puritans, although an Episcopalian, leaving a home of luxury and comfort to share the destiny of these persecuted pilgrims in the New World.

The same year the governor crossed the harbor with a few leading families to Shawmut and there founded Boston, which was "destined to be the capital of the

colony and the metropolis of New England." The civil life of the people from the first had a tendency toward democratic liberty. A representative form of government was formed in 1634, and was accomplished against the opposition of the British ministers. Between three and four hundred voters gathered on election day, and after listening very attentively to the learned Cotton, who preached very forcefully against the evils of republicanism, the election went on. The old method of public voting was replaced by the use of the ballot box. The only bar now to the true democratic form of government in New England was that only church members were allowed to vote.

About this time the Connecticut colony—one of the earliest—began. The council of Plymouth made a grant of territory to the Earl of Warwick, who the following year assigned the claim to Lord Say-and-Seal. Lord Brooke, John Hampden, and others. Before these men were able to avail themselves of this grant, the Dutch settlers at Manhattan came to the Connecticut River and built on what is now Hartford (Conn.) a rude fortress, which was called the "House of Good Hope."

The valley of the Connecticut was claimed by the Plymouth Colony, who upon hearing of this intrusion, sent a force to compel them to vacate. The colonists of New Plymouth claimed the territory westward beyond the Hudson and Connecticut Rivers which covered the Dutch settlements of New England. Entering the Connecticut River the English of New Plymouth passed the "House of Good Hope," defying the Dutch, and built a blockhouse seven miles up the stream, which was called Windsor.

The Boston people not satisfied in 1635 sent a colony of sixty people to take possession of the Connecticut valley, and settlements were made at Hartford, Windsor, and Wethersfield. John Winthrop, Jr., arrived in New England this year, with a commission to fortify the mouth of the Connecticut River, and also to drive the Dutch from that section. He built a fort at the entrance of the river and founded Saybrooke which was named in honor of Lords Say and Brooke,

who had chosen this country for colonization. This brought the then most important river of New England under the Puritans' control.

Rhode Island was founded by a young minister named Roger Williams, from Salem. He was a radical Anabaptist and had received baptism in infancy. Being convinced of the invalidity of his baptism he decided to be rebaptized, selecting a layman to perform the ceremony, the layman being in turn baptized by him, as were ten others. Here began the organization

of the Baptist church in America. He taught that all had the right to "follow the dictates of his own conscience and worship God according to the dictates of his own heart." He contended that "each person should think for himself in religious matters, and be responsible to his own conscience alone." He was ordered sent to England but fled to the forest in the dead of winter. Being thus cast out by his

King's Chapel, Boston, Mass.

Christian brethren he found refuge among the Indians. The next year he was given a tract of land by Canonius, the Narraganset sachem, where he founded a settlement which was called Providence.

Roger Williams was born of Welsh parents; the date of his birth is a subject of dispute. After leaving college he studied theology. He was admitted into holy orders and is said to have had parochial charges (Church of England). On account of his Puritanic views he came to America and was given charge of the church at Salem in 1631. To escape the persecutions he went to Plymouth where he became assistant pastor. He enjoyed the friendship of such men as Milton, Cromwell and others. He lived to be about eighty-four years old, but the exact date of his death is not known.

The Narraganset and Pequod Indians were always the most bitter enemies, but by persuasion Roger Williams brought about a reconciliation and made a treaty of friendship with the English. This treaty soon became a source of danger. For being friendly with the Narragansets, the Pequods violated the treaty with the English, and they committed many outrages, which were avenged by the militia. The Pequods,

finding they were not equal to the English, persuaded the Narragansets and Mohegans to join them in the annihilation of the whites. The situation became very critical, and Williams defeated their plans by first notifying Governor Henry Vane of Massachusetts of the peril, then going alone to the tent of the chief of the Narragansets (Canonicus), where he found him in council with several Pequods. For two days he pleaded with this chief to withdraw from the alliance and to stand firm to his vow of peace with the whites, and received the promise of the chief to renounce his purpose. The English easily conquered the Pequods, burning their forts and killing all but seven of their warriors.

Williams believed that the government had to do only with law-making, tax-collecting, restraining law-breaking, punishing for crimes and protecting all in the enjoyment of equal rights. The narrow-minded settlers of New England could not tolerate such belief and so Williams was arraigned and expelled from Plymouth Colony. They declared his teachings as "heretical," being "destructive to the interests of society and inimical to the best interests of man." He was driven out of the colony in the dead of winter, and for fourteen weeks his bed was in hollow trees, and his fare parched corn, acorns and roots, which simply saved him from death by freezing and starvation. He was at last taken in by the Indians whose rights he had defended and Massasoit and Canonicus entertained him at their wigwams.

Williams at last made his way to the banks of the Blackstone River, near Narraganset Bay, planting a field and building the first house in the village of Seekonk, Mass. It being found out that he was still within the bounds of Plymouth Colony—five companions having now joined him from Boston and Salem—he left his house, crossing to the west side of the bay, purchasing a tract of land of Canonicus, and in June, 1636, he with his followers, laid out the city of Providence, and thus became the "Father of Rhode Island."

In the years 1622 Sir Ferdinand Gorges and John Mason received a grant of land between the Merrimac and Kennebec Rivers, and from the sea to the St. Lawrence River, and hastened to secure this right by planting a settlement. In the spring of 1623 Mason and Gorges sent out a small company to hold their province. Twenty years previous New Hampshire had been visited by Martin Pring, and Capt. John Smith in 1614 explored and made a map of the coast.

The settlements on the Merrimac were the oldest in New England after those at Plymouth. This colony progressed slowly, the first villages being only fishing stations. After six years the proprietors divided the territory between themselves, the northern part taken by Gorges, and the southern by Mason. A minister named John Wheelright came to New Hampshire, purchasing the right of the natives to the country occupied by Mason, and secured a second patent, and the name was changed from Laconia to New Hampshire.

CHRISTIAN EDUCATION

RICHARD BRAUNSTEIN

THE education of the rising generation is a matter of vital importance to both church and state.

An intellectual and secular education is not sufficient to secure the welfare or safety of society. Rome had more intelligence and culture when she fell than when she was in her prime. The "shaggy" demons of the wilderness who trampled out her civilization were more moral than her citizens. The golden age of Grecian and Roman culture and civilization was that of foulest corruption and impending destruction. The fine sense of beauty has no necessary connection with duty, and the grammatical declensions of virtue have no connection with its practice. Education may create most accomplished rogues and dangerous neighbors. It is said that after Russia had tried secular education for awhile, her prime minister said to the Czar, "*We are raising a race of demons.*" The tree of the knowledge of good and evil in Paradise brought in the devil's millenniums.

Knowledge of good and evil affords no assurance of a greater love of the one, or of a greater hatred of the other than would exist in ignorance. Our first parents no doubt found the devil well enough informed. The archangel, Michael, and the arch-devil, Lucifer, may have the same intellectual ability and the same intellectual attainments but the fidelity of the one and the disobedience of the other make heaven and hell. Unless knowledge ripens into moral force it becomes the tool of selfishness and sin. Corrupted intelligence is worse than misled ignorance. Knowledge perverted is misused power. Give the printing-press to vicious men and they will only do harm with it.

There is today a superstitious faith in spelling books. Men who ought to know better will tell you with census tables and statistics of all kinds in hand, that *ignorance is the cause of crime*. Ignorance is only one of many concomitants of crime. Intelligence is another. And knowledge is a third. It is purely a ran-

dom inference of careless writers that because ignorance and crime are often together therefore ignorance is the cause of crime. We must educate the moral and religious nature by the word of God. We cannot make children honest by teaching them the multiplication table, nor virtuous by teaching them grammar, nor benevolent by teaching them geography. There is no logical connection whatever between a secular education and a good character. To make men and women *moral* we must educate the moral nature on the basis of revealed religion.

Washington said: "Religion and morality are the essential pillars of civil society." And again, "Virtue or morality is the necessary spring of popular government. Whatever may be conceded to the influence of refined education upon minds of a peculiar structure, reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

The Word of God furnishes the only valid sanctions of sound morality. If we reject or neglect this and rely on the "unperverted instincts of human nature," as well shut up our schools and wait for some Cæsar with his drawn sword for a scepter. Great populations, especially when congested in cities, must either be trained to the liberty of the Gospel or be ruled by a tyrant. Where God and his will are *not known* and acknowledged no imperative motives can be found to make men noble and good. The mass of men who believe they are to die like dogs will live like dogs. Says John Stuart Mill: "If a man prefers to be a contented pig, we should have no positive reason for thinking him wrong; even did we think him so, we should have no positive reason for telling him so, and even if we told him, we should have no means of convincing him." And can such persons be qualified to maintain civil order and free institutions? "Unless morality is rooted in a reverent love of God it will be driven before the sudden gusts of temptations like rattling autumn leaves before winter winds." If it looks upon religion as the best *Chief of Police* merely, and not as the interpreter of everlasting verities, it must of necessity be destitute of force. Short of the willing sacrifice of self to the righteous claims of God, and the cheerful movement of the mind within the limits of a supreme law, there is no pure or durable morality. Religion is the root of which the purest morality is the flower. The flower cannot exist without the root; and the root cannot exist and have vitality without the inflorescence in morality.

Our Christian education and evangelism, to be most effective, must begin with the young. Statesmen tell us that we must stop *raising* rogues, if we would get rid of the race. Christian instruction should begin with the dawn of existence, and predominate through the whole course of education. "First, midst, and last,"

we should teach "what man is to believe concerning God and what duty God requires of man." As eternity surpasses time in importance so does this surpass all other knowledge. If our children are trained in secular schools and grow up godless, our boasted science will soon shine like an electric light over a moral graveyard. We must begin from the first to train the heart and conscience along with the intellect.

THE LEGENDARY IN LITERATURE.

LUELLA G. FOGELSANGER.

"INTERWOVEN with the fabric of our English literature, of our epics, dramas, lyrics, and novels, of our essays and orations, like a golden warp where the woof is only too often of silver, are the myths of certain ancient nations."

Myths of nations were born in the infancy of the people. They are creations of the imagination; so airy, so fanciful, so artistically woven together by threads of romance, that we marvel at their beauty and simplicity. Gods and goddesses, nymphs and dryads, Fates and Furies, Titans and Cyclops, march in solemn grandeur before us. Ignorance concerning the creation, concerning the universe, concerning the true God, led these people to attempt explanations of the mysteries about them.

"To the ancients," says John Fiske, "the moon was not a lifeless body of stones and clods; it was the horned huntress Artemis, coursing through the upper ether, or bathing herself in the clear lake; or it was Aphrodite, protectress of lovers, born of the sea foam in the East, near Cypress. The clouds were not bodies of vaporized water; they were cows, with swelling udders, driven to the milking by Hermes, the summer wind; or great sheep with moist fleeces, slain by the unerring arrows of the sun; or they were mighty mountains, piled one above the other, in whose cavernous recesses the divining-wand of the storm-god, Thor, revealed hidden treasures."

To them their gods were beings who loved, hated, acted nobly or despicably. They were often the embodiment of their ideals. In the characterization of these beings we catch a glimpse of the longings and aspirations of the Greek mind. Human nature was the same three thousand years ago as it is today. The study of these myths often results in a lesson in psychology and in human nature.

The Greeks were lovers of the beautiful in art, in literature, and in nature. Their natures were susceptible to the beauty of the sky and mountain about them; and in their literature they voice their aspirations and longings for the beautiful, for the unattainable.

The Romans borrowed their myths largely from the

Greeks, so do not contribute so much legendary lore to literature.

The deeds of Norse heroes and gods are extolled in Norse mythology. As we read these stirring tales, our pulse quickens and our imagination carries us to the cold, bleak northern country where the wind moans and sighs around the great halls of king and warrior. We see their heroes warring with the great Frost Giants; we see them battling against the very elements themselves. These tales are vigorous in style, pregnant with life and action.

These myths are not to be considered as mere foolishness and folly; they are interesting products of the human mind. Myths give the early history of a people who were yet unenlightened, who did not see things in their true perspective. They were yet unable to ex-

plain many phenomena in nature, therefore, were unable to record accurately. These airy products of the imagination have ever been a source of inspiration to the true poet. As the wanderer turns to a sparkling fountain, as the flowers turn to the sun, as "turns to sunny isles the sea," so turns the poet's mind to the myths of all nations. To understand the literature of any country we must be acquainted with these golden tales and rich fancies.

The beauties and the wonders of nature are a fable of things never fully revealed. For lack of imaginative training, of sympathy, of awe we have not yet valued the mysterious beauties of nature; we have not yet discovered the potential poetry about us on all sides.

BEHIND GRAY STONE WALLS

HATTIE PRESTON RIDER

AN institution for the punishment of wrong-doers is at best an unpleasant object to contemplate. Yet since such places and conditions exist, we may help a little toward their improvement by giving them a bit of study as well as sympathy regarding their unfortunate inmates; for public opinion is only the concrete action of many individual minds, and it is public opin-

ion that demands and accomplishes all works of progress. The hardest that confronts society, is growing with every decade nearer a Christian solution. The hard old Mosaic law of "a life for a life, an eye for an eye," etc., is slowly but surely giving place to the gentler teaching of the Master, a spiritual as well as literal "gathering up of the fragments" of broken lives. Yet it is not only necessary, but humane and just, to shut those erring ones away from their kind, when they have so demonstrated that they are unfit for society, that it is unsafe both for themselves and the public, to trust them with their liberty.

In the State of Wisconsin there is no crime heinous enough, in the eyes of its inhabitants, to warrant the taking from one of their fellows that sacred gift of their common Father: LIFE. If an individual member of its society has transgressed this holy law, he is not visited with a like fate, hideously dealt him in cold blood by strangula-

tion or electricity, and his soul sent into eternity with its terrible burden still upon it; but he is placed where there will be no opportunity for him to break that law again. There is a case on record in this very peniten-

Front Yard, State Prison, Waupun, Wis.

tion that demands and accomplishes all works of progress.

What to do with criminals is a world-old, world-wide question, a problem which, though one of the

tiary where a physician was sent up, having in a moment of passion struck a member of his household. The woman fell backward, her head coming sharply against some hard object, the wound resulting in her death. The physician was under life sentence; but his conduct was such in the prison that he soon came to be trusted to treat the sick there, and finally to be sent on parole to attend the families of the officers who lived outside. On one such occasion he was attracted by the angry disputing of some children.

"Oh! boys!" he remonstrated, pitifully, "don't quarrel! See what a dreadful thing happened to me, just because I lost my temper!"

As a matter of fact, this same man was later pardoned, and lived to a useful and respected old age, in a quiet home under the shadow of the very walls within which he had learned so bitter a lesson of self-control. What a wide contrast to the fate of the scaffold or the electric chair!

With crime as with every other evil, it is truly said that an ounce of prevention is worth a pound of cure, hundreds of times over. Intelligent Christian training and education, the real sort that develops physically as well as spiritually, is without doubt the "ounce of prevention" in this case. The public and Sabbath schools, the church, the home, the Young Men's and Young Women's Christian Associations, have each their grand parts in the work, none less important than the rest. But training and education, for the most, have passed out of the reach of the miserable denizens of this walled and guarded retreat. The golden time of youth has slipped by forever, for the majority of them. They have grown into manhood neglected, ignorant, with blunted sensibilities and hardened hearts.

So, if one may indulge in a truism, the best that the authorities can do, is to do the best they can. And those same authorities have made honest endeavor. The arrangements in the State penitentiary at Waupun are excellent, from both economic and sanitary points of view. The flagged floors of the long corridors are spotlessly clean, the rows of cells opening upon them marvels of neatness. The cells themselves are good studies of character, even at its lowest. Some are bare and devoid of individuality, as if their occupants merely existed there in mute protest against

fate; others are trimly kept, with a shelf of worn books, or a collection of picture-cards adorning the walls.

The State has lately fitted up a fine new dining-room, and the kitchen and bakery are wholesomely kept. It requires some two hundred and fifty loaves of bread,—and it looked light and tempting—per day, to feed the eight hundred inmates. We saw huge pans

of steaming, fragrant baked beans, and the monster glistening coffee-boiler sent forth a delicious odor. The chief cook himself, despite his stripes and shame-faced air, was clean and bright-looking. Stripes are worn only by the intractables. No visitor is allowed to hold conversation with the inmates, or carry a package, even a camera, inside the building. Neither are male visitors allowed in the female prison.

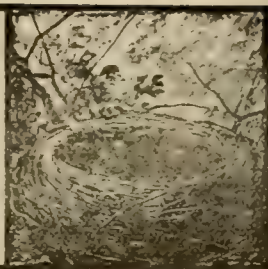

As the result of cleanliness and nourishing food, there is very little sickness in the institution. The main industry is the knitting-shops. The grounds are most beautifully kept, the convicts performing all the labor there. Weekly religious services are held in the chapel, and some excellent music rendered. Lately there has been organized a military band of some thirty pieces, which holds rehearsals twice daily within the walls, and gives an open-air public concert every week. This innovation was censured at the start by some conservatives; but the more charitably-minded residents of the city enjoy it, and heartily endorse the plan. The warden himself declares that he can already see a good influence resulting, in the easier management of the men.

One evening we met a company of "trusties" coming in from work on the State farm a mile from the in-

(Continued on Page 1165.)

NATURE STUDIES

EVERGREENS—PLANTS IMMORTAL.

M. E. S. CHARLES.

THE evergreens are typical of immortality. They are the immortals of the plant world. As the deciduous trees and plants are the glory of our summer woods, the evergreens—plants immortal, are the glory of our winters.

In the South's woods that large shrub, sometimes attaining the size of a tree, the holly, attracts attention. Its broad, green, thorn-guarded leaves cannot hide the rich clusters of glowing berries. The sharp spines on the edges of the leaves are the hardened woody fiber extended beyond the rest of the leaf.

These leaf-spines have queer tales to tell us. They are only used for self-protection. The holly, when young, and dangerously near nipping teeth, has very many and stiff spines, but as the tree grows older, and the branches reach up out of harm's way, the spines become less numerous. The evergreen oak, as a tree, has smooth leaves. If kept trimmed into a shrub it puts spines upon its leaves. A famous botanist says: "Such observations throw us back on the unity of design in nature, leading us away from the earth to him who is the end of problems and the fount of certainties."

Near the holly stands that beautiful evergreen, the juniper, abundant in hoary, blue berries. This is the best-beloved tree of our winter woods, joy of the artist's eyes, and good providence to the hungry birds. "Sweet is the juniper, but sharp his bough," sings the poet.

Around the holly and the juniper stand the tree immortals—fir, pine, hemlock, cedar, spruce, balsam. They have not the gay fruits of the holly and the juniper, but their brown cones, large and small, pointed or round, compact or loosely opened, have their own beauty.

The slippery needles or close-pressed scale-leaves of our northern evergreens shed snow masses which would soon break the broad-leaved trees to pieces. The flakes fall from the curved and shining surfaces, and sift through the feathery branches towards the ground. Winds which snap the branches of the broad-leaved trees, whose spreading foliage resists them, sigh harmlessly through the plume-like boughs of the coast mountain pines and firs. Thus the needle or scale-

bearing evergreens are fitted to cope with the trying conditions in which most of them pass their lives.

The leaves or needles are bound together firmly in bundles and are well secured to the tree, while the shape offers little resistance to wind or snow. This insures their long continuance on the tree. The pine tree leaves remain three or four years; the spruce and fir five or even seven; the yew eight; some others are even longer-lived, and remain from sixteen to eighteen years. They gradually dry and wither for a year or two before falling, and they do not all go in a single season. As some fall others develop; there is continual loss and replacement. Thus we find the ground under the evergreens always well carpeted with their leaves, while in undimmed glory the green immortals among trees seem to watch with wonder the falling of the autumn leaves around them.

While walking among those immortals of the tree world while the first December snow falls lightly over them, we see beneath them smaller forms of evergreen growths. The beds of ground-pine are depths of verdure; we may gather yards of it for Christmas decorations. The common name is misleading, for it is not a pine at all, but a club-moss, a lycopodium. Its vivid green in the winter woods will remain upon it for weeks after it is gathered, and then it will fade to a beautiful brown with tawny or dull golden edges.

Most of the ferns have withered to the underground stems in December weather, but the Christmas fern lifts sturdily its stiff, serrated fronds well above the snow. Owing to the enduring nature of the fronds, they have been extensively used in floral decorations in recent years. Millions of them are now used annually in all our large cities. It is doubtless from this use of its fronds during the winter holidays that the plant derives its name of Christmas fern.

The checkerberry or wintergreen, and the partridgeberry, just as deeply green in its vines and as brilliant red in its berries, but less aromatic in flavor, have met winter courageously, and bright green leaves, and bright red berries, smile from under the white edges of the snow blanket.

The mosses are also beautiful evergreens. Brush the snow from the dark velvet-like cushion of green, covering decayed wood, or carpeting the spaces about the feet of the giants which keep perpetual watch above

them. Dark green, light green, under a microscope they show many variations in their little bright, sessile leaves packed along the main stem.

While we have many plants and trees that equal the evergreens in beauty during the summer months while clothed with a wealth of leaves, it is only the glorious evergreen plants that deserve to be ranked in the cohorts of the immortals.

THE WOOING OF DOMESTIC FOWLS.

To a considerable extent, geese, guineas and pigeons are monogamous, and, where the sexes in a flock are equal, each male will be true and faithful to his mate. With ducks, turkeys and chickens this is not the case. The common barnyard fowl is the greatest Mormon, often having as many as twenty-five wives.

The gallantry of the gander is truly an object lesson. He will ever be the constant companion of his choice, never allowing her to get out of his sight for a minute. Should he be separated from his mate, and placed with another, he will seldom accept the new one so long as the old mate is anywhere within hearing distance.

When the goose is hatching, the gander at once stations himself close by the nest, standing for weeks on one leg, and one eye half-closed, keeping guard. The moment the first gosling breaks forth from the egg, this vigilant guardian draws his defense closer, and stands or walks on both feet.

Pigeons, when mated, are true to each other, and share the labor of rearing their young. It has been noticed that during incubation, the hen will occupy the nest from four o'clock in the afternoon to ten o'clock the next morning; and the moment she leaves, the cock bird will take her place, remaining at his post until it is time for the hen to return.

Jointly they build the nest and, after that work is completed, the cock will be seen driving the hen to the nest to lay. Pigeon nature is indeed peculiar. Fifty mated pairs in a pen will live harmoniously together, each male attentive only to its own mate, not only helping in the work but protecting his spouse from harm. The presence of an odd cock in the pen will raise a disturbance. Desiring to secure a wife, this intruder will visit every nest, but only to be fought off in the most desperate manner.

The wooing of the pigeon is a very pretty sight. The cock holds his head erect like a drum major, coos loudly, and lowers his wings and spreads his tail so that he may make himself look attractive. Should Miss Pigeon not care for a mate, she will stand quietly by, giving no encouragement.

Then, should the "love-sick swain" approach her, she will coo softly and move her head back and forth. If this does not act as a positive refusal, and if the persistent lover gets too close, the insulted maid will

strike at him with her bill and one wing, to remind him that she cares nothing for him.

But, on the other hand, should she fancy his advances, she will notify him by bowing her head, winking her eyes, giving a trembling action of the throat, and slightly fluttering her wings, raising the shoulders and spreading the tail. At times she will reach out her beak as if wishing to be caressed.

This courtship of the pigeon recalls the wooing of the turkey while in the wild state. Early spring is the love season, during which time the males roost apart from the females. From every direction the voice of the male bird is heard calling from early to late. For days the females pay no attention to this call, but instead remain quiet for some time. Finally they become less obstinate, and coquettishly return the call. As soon as this joyful sound is heard, the males promptly respond, uttering notes of joy. Should the flirting female be on the ground at the time of the call, the gallant males will come up to her and parade before her in the proudest style, spreading their tails, depressing the wings so that they trail along the ground. The head is drawn back on the shoulders, and thus they swell, gobble and march, each one evidently trying to outdo the other. It is a regular contest, with the possibility of only one winning the prize.

But to these fanciful displays of love the female seems indifferent, merely being audience to their displays of gallantry. Then should this performance fail to win the prize, the contestants challenge each other to mortal combat. The conflict is deadly, and the winner is at once congratulated by the flirting miss and walks off with his prize in the most nonchalant manner. A close watch results in the opinion that the hen does not accept her mate purely from love, but rather for the faith she has that only the fittest survive.—*Farm Journal*.

NOVEMBER.

All the flowers are blown away
By the winds that sweep the fields;
Autumn all her golden wealth
To the gray November yields.
Mournfully the brooklets creep,
Overhung by grasses sere;
To the naked, moaning boughs
Cling the last leaves of the year.

Yet amid the season's gloom
Comes a day of beauty rare;
Sunshine spread o'er field and wood,
Dreamy skies and balmy air.
Summer's spirit has returned,
And, with pitying, tender sigh,
Bends above the grieving earth,
Kisses hill and vale good-bye.

—Minnie Reid French.

THE great art to learn much is to understand a little at a time.—*Locke*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

SUPPOSE all people were to follow the idler's aimless, empty program even for one day. Who would want any experience in the results?

HAVE you read the offer to new INGLENOOK subscribers given in the advertising pages of this issue? Read it and then show it to your neighbor.

WHAT is the idler's idea of life? It would be hard to say. Evidently it is not a very clear one and not at all a just one. "To every man his work" doesn't leave the smallest bit of space in this world for the one who has nothing to do.

To every man his work many mean a particular work for each worker, but we believe it means most of all work that needs *to be done* which one is able to do. At least no allowance is made for any one to fold his arms until his particular job turns up.

PROFESSOR J. S. FLORY of Bridgewater College, Virginia, the author of "Literary Activity of the Brethren in the Eighteenth Century," is known to many of our readers and they need no assurance as to his reliability. Professor Flory is a fine scholar and student of history and the field of this work naturally appealed to him for the best he could give it. That he has fully answered the appeal is the verdict of all who have read the book. The book is one that will not grow old or out of date. It is one that all who are interested in our church's history should have for study and for reference.

THE INGLENOOK Cook Book is a popular book of its kind wherever it is known. It is a collection of recipes of the common dishes used by the mass of Amer-

ican people. The recipes were collected from experienced cooks—mostly from country homes—and each one is followed by the name and address of the woman who recommends it. More than fifty thousand homes in our land now possess one of these cook books; the fifty-seventh thousand has been published and is now being sold. If you wish to avail yourself of the offer referred to above and already have the Cook Book, send for the INGLENOOK and make a present of the Cook Book to one of your friends.

SUPPOSE that for one day all who can work were to take hold of the work of the world with the energy and earnestness of the world's best workers. The results would be so gratifying that the majority would want the experiment repeated over and over. If the idlers would once become sufficiently interested in some work to take hold of it heartily and earnestly they would soon recognize that far from being pitied or despised the laborer is to be envied because of the real enjoyment he gets from working and from the results. It is natural that the enjoyment of the worker should be greater than any pleasure the idler may have, since he is meeting the purpose of life and lives in harmony with the One who worked "while it was day."

THE CHRISTMAS SPIRIT.

It will be impossible to observe Christmas in its real significance without the Christmas spirit. To be sure, one may go through the form, may observe something, but it will not be the day that marks the advent of the Savior into the world unless the spirit that emanated from his self-sacrificing life in some degree rules over the life. And this spirit cannot be had simply for special occasions. One cannot wait until Christmas to get into the Christmas spirit and then expect to don it as one would a garment. Besides, if one desires to observe the day properly it is necessary to have the spirit a long time before the day itself appears. The Christmas spirit must superintend the making of gifts and the Christmas shopping.

On all sides one hears talk about getting ready for Christmas, and here and there one sees marks of the strain this Christmas preparation has laid upon some. All this would be changed if the preparation for Christmas began with getting into the Christmas spirit. Then the whole program would be a pleasure, a joy. Gifts would be sensible and appropriate and therefore highly appreciated by the recipient. The Christmas spirit leads one to be extremely generous—extravagant, we may say—but only with the things of which he has large possessions. It will not lead one to spend money lavishly unless he has money in abundance. But of those things the supply of which is limited only by one's will—love, kindness, helpfulness, cheerfulness,—

one *must* give lavishly,—it is the strongest evidence that one is in possession of the Christmas spirit.

Let us get into the Christmas spirit *now* and see what a blessed Christmas season it will help us to have.

PLAN WAYS TO SAVE THE BABIES.

RECENTLY there was held at New Haven, Conn., under the auspices of the American Academy of Medicine, a conference looking to greater thoroughness in the prevention of infant mortality. The conference was made up of physicians and laymen particularly interested in this important work, and lasted through two days. We note the names of several speakers and the subjects from which they pointed out the influences having a vital effect upon the infant.

Dr. J. H. Mason Knox, Jr., of Baltimore, considered the danger to infants of alcoholism on the part of their parents. "The lowered vitality of parents consequent upon the habitual use of alcohol," he said, "has a direct effect upon the vitality of the child. If alcohol is indulged in in large quantities by the expectant mother, it will be apparent in the lowered vitality of the child. The indirect effect of chronic alcoholism in the home on the life of the young child is to weaken its powers of resistance to disease and to deprive it of the right which every child should have for a normal, healthy existence."

Dr. R. A. Urquhart, of Baltimore, advocated the passing of laws which would provide for the prevention of contagion from social diseases. "The false position on social diseases assumed by the authorities," he said, "and the consequent ignorance of the far-reaching effect of such diseases is an everlasting disgrace to our modern civilization. It is high time that physicians, knowing its perils, force upon the powers that be the right of the public protection, as in the case of any other contagious disease. The details of the required laws and methods of making them efficient will work themselves out.

"After all, however," the doctor concludes, "the most potent influence will be in giving the public some knowledge of the serious and far-reaching effects of such diseases. It is not merely prohibiting a fool from his folly. Too frequently the innocent suffer, the State is called upon to support weaklings and racial degeneracy begins."

Dr. Alice Hamilton of Hull House, Chicago, discussed the subject of "Excessive Child-Bearing." She gave the results of a statistical study of one hundred sixty families, showing that through insufficient care and the exhaustion of mothers from excessive child-bearing infant mortality increased out of proportion with the increase in the size of the family. Grouped according to nationalities, the Jewish families showed the lowest child death rate, with the American-born next. The highest death rate was found in the Italian

families, with the Germans, Irish and Slavs ranging in between in the order named.

Sherman C. Kingsley, superintendent of the United Charities of Chicago, in a paper on "The Responsibilities of General Relief Agencies in the Prevention of Infant Mortality," said: "Our philanthropy and our municipal housekeeping ought to be brought to this test: Do they furnish forth conditions that are right for the baby? Where the white hearse goes most often there you will find the weakest places in your municipal housekeeping." Mr. Kingsley advised the nurses from charitable organizations, among other things, to continue their visits to a home until the mother had profited by their instructions; he urged also that they be more patient in winning the confidence of the foreign mothers and teaching them.

The conference took hold of its work in a very practical way as is shown by the above, and we believe much good will result. The meeting itself is a source of encouragement and inspiration to all who earnestly seek the highest good for the race.

LITTLE THINGS.

A good-bye kiss is a little thing,
With your hand on the door to go,
But it takes the venom out of the sting
Of a thoughtless word or a cruel fling
That you made an hour ago.

A kiss of greeting is sweet and rare,
After the toil of the day,
But it smooths the furrows out of the care,
And lines on the forehead you once called fair
In the years that have flown away.

'Tis a little thing to say, "You are kind,"
"I love you, my dear," each night,
But it sends a thrill through the heart, I find;
For love is tender, as love is blind,
As we climb life's rugged height.

We starve each other for love's caress;
We take, but we do not give;
It seems so easy some soul to bless,
But we dole love grudgingly, less and less,
Till 'tis bitter and hard to live.

—Christian Endeavor World.

BEHIND GRAY STONE WALLS.

(Continued from Page 1161.)

stitution. There were about thirty of them, and under the direction of only two guards. A trusty rarely betrays the confidence reposed in him, it is said. Those faces were a sight to make the heart ache. Some of them were stupid, some hopeless, some hard and bitter, the large majority unmistakably foreign-born, and one and all showing plainly that primal cause of crime and degradation: the lack of right education. . . . We could but judge that the warden is right. It is too late to mold. All that can be done for them now is to throw around them the best and most humanizing influences that can be commanded.

THE HOME WORLD

WOMAN AS WIFE, MOTHER AND HOME-BUILDER

ELIZABETH B. GRANNIS

THE topic on which I am writing is not intended to imply that all responsibility or honor depends upon the woman, wife or mother in successful planning or achievement of home-building.

Women have accomplished much in home-building who were neither wives nor mothers. I have known spinsters who have proven successful home-builders for variously constructed families. Some of these have earned their financial capital, while others have inherited it. My time allotted for this subject could be profitably spent in recounting what I have known of private and philanthropic home-building by unmarried people both men and women.

Wives and mothers generally serve as the chief cornerstones of model homes. Sometimes they embody the pillars, the framework and the embellishments in addition to the financial support. The delicate artistic touches of all home sentiment are expected to emanate from the heart, brain and hand of woman. She performs the bulk of service from the foundation to the capstone of the home. It may be remembered that we have had no more popular lecturer on home-building than Joseph Cooke, who declared that every model home must be the habitation of a husband, wife, at least one baby and one grandparent, though we may not all agree with Joseph Cooke in this special declaration. A wife to do her best in home-building should have acquired knowledge from both scientific and spiritual research, relative to mating in marriage. Such knowledge not only benefits the chief partners in wedlock and their offspring, but it aids every member of the home. Natural laws which are God's laws relating to mating and marriage have been ignored, not alone by ignorant people but by most scientific students in the past. If the church and scholarship both have failed to render helpfulness in this most important relationship in life, shall we not appeal on this momentous subject to our modern women thinkers?

Why do women and men fail, according to their noblest desires and best intentions, in seeking to marry those whom they have substantial reasons to believe are able to aid them to the highest all-round development!

Every woman considering wedlock should first seek the one man who she believes can aid her and be helped by her above all others, through marriage, to attain her highest achievement in wifehood and motherhood; or in other words, to the highest spiritual, mental and physical citizenship. A woman thoroughly well-informed on matters of general interest, adds much to comradeship with an intelligent husband and proves an able and competent mother of children. The heart and brain forces of women neither lessen their graces, detract from the daintiness of their attire, nor in any respect restrict their fascinations to worthy men. There is no responsibility in a woman's life which equals that of selecting her mate in marriage. Wedlock not only involves the fatherhood of her children, but the life partnership in home-building for all who are to share their haven of human rest.

Most of us are familiar with the unwise and flippant expressions of the thoughtless relative to the most sacred relationship of human life, such as "Oh, she is too much in love with her husband!" There is no possibility of a wife loving her husband, children or home too much! She may, however, love unwisely and, lacking self-control or firmness to hold to her good judgment she may permit herself to manifest injudicious indulgence to members of her family.

Every woman should decide this question before she assumes the responsibility of wifehood: Is she the one best fitted to develop, restrain and prove the true helpmate for the life companion upon whom she has bestowed her purest love? She should be convinced that the man of her selection will prove her truest

friend to aid her to attain her best in every human association.

Home-building in all its varied phases is neither dependent exclusively on the woman nor the man. Society, so-called, has largely restricted and stultified the duties and privileges of the sexes. Each should be the counterpart of the other. Each is dependent on the other, and each is to supplement the other when necessity or emergency requires.

While the wife and mother is the chief factor in the home, her duties and privileges should not be dwarfed by conservative adherents.

Who is authorized to decide the specific privilege or duty devolving upon either half of the unit in wedlock which jointly builds the practical model home? If one of these partners possesses musical or artistic talent for the elevation of the people, who is to sit in judgment and nullify these gifts by preventing their cultivation? Shall narrow prejudice continue to barricade the development of wife or mother, or any phase of womanhood on account of sex?

Woman is equally accountable with her brother to develop and exercise every dormant gift and talent, whether for scientific discovery, research, mechanics, stock-raising, railroad and mine promoting, or along any other line from which substantial aid may accrue for the successful building of the home. Every girl child should be trained from infancy that it is her right and privilege to earn money in skilled industries, the proceeds to be applied according to her best judgment to home-building or to any other worthy object.

That which is woman's work is man's work, and *vice versa*. It is as absurd to humiliate the male-man inventor or researcher because he is not a successful moneygetter, as it is to stigmatize the wife as unwomanly for attempting to utilize and develop her God-given talents to earn money for family and home-building.

What about the knowledge to be sought by a wife and home-builder on her decision to become a mother? The advent of the first baby is an event seldom equalled by any other factor in home-building, and every Christian virtue should be possessed by a well-equipped mother, to aid her in the discharge of her increased responsibility. The love and responsibility of parenthood is only surpassed by the fulfillment of the highest conception of the Creator for both partners in marriage.

No home-builder should thoughtlessly assume the responsibilities of motherhood. She should be thoroughly persuaded that she can do her full part to clothe an immortal soul with a human body able mentally and physically to render at least seventy years of good service to its fellows. A mother should have the knowledge that she is best fitted by her Creator and her heredity, to know more of her own child and render it bet-

ter service than any other individual except its father. Parents should know better than any one else the strong and weak qualities possessed by each of their children,—a lesson learned by a study of their own heredity.

A mother above all others should acquire implicit self-control in order to exert a helpful influence by her example upon other members of her home.

No home is so humble that it can evade its responsibility or be ignored in its influence upon national home-builders.

Who could estimate the increased influence of the scriptural triplet—"Love, Joy, Peace" in the modern home if the medical profession were absolutely supplanted by a health profession?

When the greatest civilization known in the history of the human family has learned to teach the masses to practice according to physiological and hygienic facts, "Love, Joy and Peace," will greatly increase for home-builders and their dependents. There is a small minority of progressive, conscientious, self-sacrificing physicians of regular practice who are working toward mighty reforms in the restriction of the use of drugs and are talking about revolutionizing the financial methods of the medical profession.

Every intelligently managed home would greatly prefer to pay a district health official its allotted stipend for keeping the home in good health by natural methods, than to pay a doctor to treat its diseases, most of which are caused by ignorance of natural laws and self-indulgence.

Every aspirant to successful home-building should first know how to build and keep in order his or her own body in order to know how to produce and provide for other bodies.

The home-builder who is competent to see that a child sleeps well, is properly aired, wholesomely fed, well bathed, and enjoys free scope in natural exercise, can, when whooping cough, measles or even scarlet fever knocks at her doors prepare for these disorders in a natural and mild form. These and similar illnesses can be provided for with Nature's common remedies, good ventilation, warm baths, plenty of cambric tea, etc., and there need be no fear of any consequences to patient or home.

Now for a word on the mother-in-law and grandfather. Some of us will doubtless wisely contemplate the advantage to the average home of the historic, loving, wise counsellor in a mother-in-law like Naomi. In many cases the home, including each occupant, owes much to and is truly dependent upon, the heredity which produced the wife and mother, who is the chief home-builder. It is a common incident for an audience to be either entertained or disgusted by weak, flippant allusions by public speakers to mothers-in-law. An audience is seldom cajoled into manifesting amuse-

ment at the expense of fathers-in-law. We have many Naomis of today, who are reaping the harvest of loving home environment in which they have been a producing factor in building their Ruths' homes. Both mothers- and fathers-in-law have proven equally interesting studies, to me, in home-building.

It might be profitable for any audience to look into the life-history of home-building in its relationships to fathers- and mothers-in-law.

It was my good fortune to be entertained during a church missionary convention recently for a period of four days, in the home of a "beloved physician," in Canada. I learned there many of the factors which produced an attractive home life. Even the husband, father and son-in-law, exemplified as much genuine filial affection to the old Scotch Presbyterian mother-in-law, as of loving companionship with his little daughter. And not least interesting was the fact that this mother-in-law and grandmother was really only the spinster sister of the real mother of the wife. She took her deceased sister's child into her own household when she was but three years old and later was convinced that she could better adopt a son than to live without the daily companionship of her niece and foster daughter. No one was more honored or efficient at social functions, in the care and supervision of the children, and in sharing all the weighty responsibilities of home-building in this charming home, than this loving old mother in Israel!

Another home with which I have been intimately acquainted for more than twenty years is that of a wholesale coal merchant in New York City. He is husband to a very dear wife and father to six children. This partner in home-building has often expressed to me his conviction that he had in his mother-in-law more of value in his home for his entire family, than could be summed up in any other one member. "Why, mother is our legal counselor. I appeal to her judgment in business, both for wife and myself, realizing that we even owe the lives of the children to her care." He often says he believes a double portion has been meted out to him in his mother-in-law, because his own mother died when he was but six years of age, and that he has enjoyed more of natural affection and motherly companionship with his mother-in-law and his wife and children in his twenty-two years of home life than most men have enjoyed from babyhood throughout the threescore and ten years allotted to man.

There is no question of greater moment to be considered by the state than that of marriage and home-building. The family and home life of the church and state largely decides whether they are to become an example or a warning to all peoples.

THEORIZING AND PRACTICING.

You may see continually girls who have never been taught to do a single useful thing thoroughly; who cannot sew, who cannot cook, who cannot cast an account, nor prepare a meal, whose whole life has been passed either in play or in pride. You will find girls like these, when they are earnest hearted, cast all their innate passion of religious spirit which was meant by God to support them through the irksomeness of daily toil, into grievous and vain meditation over the meaning of the great Book, of which no syllable was ever yet to be understood but through a deed; all the instinctive wisdom and mercy of their womanhood made vain, and the glory of their pure consciences warped into fruitless agony concerning questions which the laws of common serviceable life would have either solved for them in an instant, or kept out of their way. Give such a girl any true work that will make her active in the dawn and weary at night, with the consciousness that her fellow-creatures have indeed been the better for her day, and the powerless sorrow of her enthusiasm will transform itself into a majesty of radiant and beneficent peace.—*Ruskin.*

THE ROSE QUILT.

My mother made a patchwork quilt

When she was seventeen,

With roses of red calico,

And leaves and stems of green.

A thing of beauty it was deemed,

And still it is to see,

For when her quilts were portioned round,

This one came down to me.

I keep it as she used to keep,

In rose-leaves laid away;

And only bring it forth to grace

A favored festal day.

But sometimes in the rainy spell,

When orchards are in flower,

I spread it on my chamber bed

To while a lonesome hour.

And as I trace her handiwork,

In stitches fine and true,

And think how patiently she toiled

Those maiden moments through,

That the flower and leaf might stay beyond

The span of her own days,

I think that in her self-set task

She won a meed of praise.

For who of us, in song or book,

Dream to outlast the hours

When twenty springs have swept our graves

As lives her patchwork flowers?

—Cora A. Matson Dolson.

A CAUSE OF FAILURE.

THE mother's influence should certainly be at its strongest during the early years of her son's life. And

yet it not unfrequently is spoilt by the time he has reached the age of fourteen. In talking with the mother of an unsatisfactory son I can see how anxious and thoughtful and truly good she is, and I wonder what can be the reason that her control over him is so slight. Perhaps at this juncture he comes into the room, and in a moment the mystery is solved. Almost before she has greeted him, she charges him with having inked his collar, or smashed his hat, or she assumes that he will be late for breakfast next morning. In short, she "nags" him.

Now the fact must be faced that little boys are often irritating people to live with; and it sometimes happens that the mother's equanimity is imperilled merely by the persistency in little tricks. It is easy to talk of always serenely compelling your son to obey, but if he will drum on the table with his knuckles, or make a noise when the baby is having his regular nap, something must be done and speedily.

The first thing to be sure of is, that if you "nag," you will lose your influence without curing the annoyance, the reason being very often that the boy is laboring to cure himself, and how can you expect him to continue in his effort if you give him no credit for it? Your business is to set yourself to see the beginning of good in him, and it is very probable that these very annoyances are the outcome of a vigorous vitality, one of the most precious endowments any one can be blessed with.

To "nag" about trifles is very foolish, because you want your powder and shot for other things. As to the general problem, the first thing is to settle what you mean to stop. Make it then a matter of obedience, and come down on the violation of your orders sharply and promptly. The worst "naggers" are those who make offenses out of things perfectly innocent to a child, simply because they exasperate the elders. But "nagging" is more than foolish. It is the indication of a failure of love, and if the mother's love ever fails, whence is the boy to learn the idea of the love of God? Any display of temper by the parent, no matter how keen the exasperation, is a weakening of the bond, and the immediate conquest will be paid for afterward with compound interest. Remember you are training your son to be a man. Before you revile him, think of what you want him to be twenty or thirty years hence. Or, better still, try not to forget that it is for eternal life that you propose to be training him, and ask yourself, in view of that, if these little annoyances ought to upset the balance of your mind. A mother who often ponders on eternity will not "nag."—*American Motherhood.*

He hath ill repented whose sins are repeated.—*St. Augustine.*

"WHEN a carpet does not require to be lifted from the floor, it may be much brightened and improved by first sweeping thoroughly and then going over it with a clean cloth and clear water containing about two tablespoonfuls of ammonia to two-thirds of a bucket of water. An occasional thorough sweeping with salt assists in keep carpets free from dust."

The Children's Corner

HOW A TREAT WAS LOST.

MRS. RUPERT'S four boys were a great trouble to her; they were so disobedient. One thing especially annoyed her: when they left school, instead of coming straight home, they frequently played about the fields, with the consequence that the dinner was seriously delayed, and their mother's domestic arrangements thrown into disorder.

"Now, boys," said Mrs. Rupert one morning, as they were about to set out for North College, "do make a point of coming home punctually today. I have a very particular reason for asking you to do so."

They promised obedience; but I am sorry to say that the instant they were let out of school, John, the eldest exclaimed—

"I say, let us go and have a game at leapfrog on Lemon Hill."

Little Claud, who had good impulses, but was seldom strong enough to withstand the influences of his elder brother, replied—

"But mother particularly asked us to be home early today."

"Oh," replied John, "that's only because she wants to get the dinner over quickly, and have the room cleaned, or the chimney swept, or something of that kind. It's of no consequence."

And so off they scampered to Lemon Hill, and for half an hour played at leapfrog in the long grass, garnished with daisies and buttercups.

A surprise awaited them at home. Their mother uttered not one word of reproach as they entered, but in perfect good humor bade them sit down to dinner.

"Where is Katie?" asked John, presently, on noticing the absence of his little sister.

His mother quietly replied—

"She has gone with your father to the Crystal Palace. He was going to take all you boys as well, but you did not come home from school in time, and it was impossible for him to wait, as it was necessary to catch a particular train."

I think these disobedient boys were punished very properly. They never stayed afterwards on their way home from school to play leapfrog on Lemon Hill.—*Selected.*

THE QUIET HOUR

THE TRUE PATRIOT'S BANNERS.

JOHN S. FERNALD.

The cross and crown, the stars and stripes,
Are banners fair that e'er should float
Upon the breeze throughout our land,
And in the hearts of all mankind
Who find a home within our realm
Should be inscribed the sentiments
Their varied emblems teach:

Of love to God above,
And service in his name
While here on earth.
And in the end the crown
Reserved in heaven for all
Who faithful prove.

Our country, next to God,
Calls us to love and serve
In many ways;
If not on fields of blood,
Harvests of peace are ripe
To toilers' hands.

To serve God best serves man,
The same of country's true
In every sense.
He who the cross takes up
And country's calls obey
True manhood shows.

WHOSE IMAGE?

S. S. BLOUGH.

IN the 22d chapter of Matthew we find the record of a conflict. The Jews asked, "Is it lawful to give tribute to Cæsar?" Jesus taking the tribute money said, "Whose image and superscription is this?" They say "Cæsar's." He then says, "Render to Cæsar the things that are Cæsar's and unto God the things that are God's."

This piece of money as a medium of exchange, having accomplished its purpose returned again into the treasury of Cæsar. It thus becomes a symbol of the soul, which stamped by the image of God goes forth into this world and having accomplished its work at length returns unto God who gave it. There is this one difference. The coin leaves the mint perfect and returns often badly worn, the soul is as bullion stamped in the mint of human life. While the coin is stamped by outside forces, the soul fashions its own character and fixes its own destiny.

The word translated character originally meant an

engraver's instrument, but later came to mean the thing engraved. Character is that which is engraved on the soul. There are many influences at work engraving the superscription upon the soul. There is the chisel of environment. No one will question that surroundings do much to shape character, but if he will, a man may transform an unfavorable environment and, like Jacob of old, change stones into downy pillows and see in visions, the angels. It is not to be supposed that God would have us yield our souls submissively to all the shapings of a corrupt environment. He has given us a will and with it we may turn the chisel of environment into right channels. To a very large degree man can triumph over circumstances. The grace of God that bringeth salvation enables the human will to be strong in the Lord. Thus may we triumph over the most adverse conditions and resist the severest temptations and thus conquer through him who loved us.

Then, again, there is the chisel of heredity. "The fathers have eaten sour grapes and the children's teeth are set on edge." "Visiting the iniquity of the fathers upon the children." Too little attention is given to this phase of life. One is born with a morose disposition, a weak will or a nature heir to every evil beast of passion; another with a high moral tone. This makes a vast difference in life, yet even this gives no license to be evil. However strong the hereditary appetite or passion, the human strengthened by the grace of God can conquer it. It is said that Socrates only by unceasing vigilance and constant struggle had been able to lead a pure life. He is a type of thousands. One never commits sin but he feels that he had power to have refrained from it. There is danger of losing this power. Passion unrestrained brings a time when evil habits bind like a network of iron. Conscience at first protesting loudly, becomes fainter, the will is weakened, the moral nerve is cauterized, the Holy Spirit can find no admittance and so ceases his work. That soul is reponsible for its own condition in spite of any hereditary weakness. Remember, "There hath no temptation taken you but such as man can bear." What image, then, is forming in the soul day by day? This is the paramount question. Every thought, deed, desire leaves its impress upon the soul and helps to form the character. Repeated action forms habit, con-

solidated habit forms character in whatever image you will. Do good deeds, think pure thoughts, cherish holy desires and by an immutable law your soul will grow into the likeness of Jesus. On the other hand, by the same law, evil deeds, an unbridled rein to evil desires and passions will lose the Christ image. Shall it be?

Finally death comes and will not change a single line of the image stamped upon the soul. What shall it be? Is the image that of the sweet and loving Christ formed amid life's storms and struggles? it will be freely drawn into the bosom of God, and to blessedness. Let then the will be transformed by the grace of God so as to thwart all evil tendencies and impressions, and acquire the beautiful state of Christed purity.

UNFRUITFUL TEXTS AND INGENIOUS PREACHING.

SOME preachers choose texts with apparently no other purpose in view than to display their own wonderful ingenuity. It is, no doubt, possible for a man to preach a very pathetic and earnest sermon on the words in Ezra 1:9: "Nine and twenty knives"; or on the description of the bedstead of Og king of Bashan, in Deut. 3:11, "His bedstead was a bedstead of iron; is it not in Rabbath of the children of Ammon? nine cubits was the length thereof, and four cubits was the breadth of it, after the cubit of a man." But when I hear a man announce a text of this sort and watch the process by which he develops from it the doctrine of justification by faith, or the necessity of regeneration, or a theory of divine providence, or some interesting speculation on the millennium of the future blessedness of the righteous—and a sermon on "nine and twenty knives," or on Og's iron bedstead, may cover anyone of these subjects equally as well as another—I always think of the tricks of those ingenious gentlemen who entertain the public by rubbing a coin between their hands till it becomes a canary, and drawing out of their coat sleeves half-a-dozen brilliant glass globes filled with water, and four or five goldfish swimming in each of them. For myself, I like to listen to a good preacher, and I have no objection in the world to being amused by the tricks of a clever conjurer; but I prefer to keep the conjuring and the preaching separate; conjuring on Sunday morning, conjuring in church, conjuring with texts of Scripture is not quite to my taste.—*W. R. Dale.*

THE WOMAN WHO COULDN'T SPEAK IN MEETING.

DR. GRENFELL, of Labrador, tells how some years ago he buried a young Scotch fisherman and his wife in a desolate spit of sand running out into one of the long fiords of Labrador. Amidst the poverty-stricken group that stood by as the snow fell, were five little orphan children. Having assumed the care of all of them, he advertised two in a Boston newspaper and

received an application from a farmer's wife in New Hampshire. Later on he visited the farm, which was small and poor and away in the backwoods. The woman had children of her own. Her simple explanation as to why she took the children is worth recording: "I cannot teach in the Sunday school or attend prayer meetings, Doctor. They are too far away, and I wanted to do something for the Master. I thought the farm would feed two more children."

"I was glad," says Dr. Grenfell, "that she *could not speak* at the prayer meetings. Perhaps after all we grade our Christians by a wrong standard. How many are losing the chances of preaching sermons that need no oratory? It is one of the causes of the failures of the churches that so much undeveloped capacity remains in the pews?"—*Selected.*

AGGRESSION AND PROGRESSION.

WE sometimes hear people talk as though a man could not be sound in doctrine and aggressive at the same time. When a man sits down and does nothing some people call him a "conservative," while the man who tries to do something is called a "progressive." The fact is, aggression is not necessarily progression towards worldliness, nor is it right to call indifference conservatism. It is only when people drift from true Christianity to worldliness that their progression hurts them and the cause of Christ. When Paul described the true Christian Church as "a peculiar people, zealous of good works," he described a Church which is both progressive and conservative. True conservatism is taught in the admonition, "Prove all things; hold fast that which is good." True aggression is taught in the command, "Go ye into all the world, and preach the Gospel unto every creature." Whenever we get so zealous that our whole being is devoted to the cause of Christ and the Church, and so righteous that we will not knowingly depart from any gospel precept, we are about where God wants us to be.—*Gospel Herald.*

PERPLEXING TO THE LAST DEGREE.

"Fear ye not, stand still, and see the salvation of the Lord."—Ex. 14: 13.

OFTEN God seems to place his children in positions of profound difficulty—leading them into a wedge from which there is no escape; contriving a situation which no human judgment would have permitted, had it been previously consulted. The very cloud conducts them thither. You may be thus involved at this very hour—it does seem perplexing and serious to the last degree. But it is perfectly right. The issue will more than justify him who has brought you hither. He will not only deliver you, but in doing so he will give you a lesson that you will never forget; and to which, in many a psalm and song in after days, you will revert.—*F. B. Meyer.*

ECHOES FROM EVERYWHERE

In addition to the 16,000 freight cars that have already been bought this year, the Pennsylvania railroad has ordered 10,000 coal, coke, flat and box cars.

Great Britain's reform administration in India has begun. The country is to have an embryo constitution and natives are to have some voice in the government.

The great shops of the Pennsylvania Railroad Company at Altoona, employing 12,000 men, are now working full time. This is the first time since the financial depression of 1907 that all departments of the great shops have been operated.

The full records of deaths for the past season from mountain climbing in the Alps is 84. In most cases the victims were tourists who failed to take guides with them who were familiar with the regions, or who took foolish risks to secure coveted flowers or mineral specimens, etc.

In its annual report the committee on charities and correction of the Washington, D. C., board of trade recommends the censorship of all plays and cheap places of amusement, the abolition of all Sunday amusements, including Sunday concerts, and a curfew law. Public baths are also recommended.

A ship subsidy law, at least one for the benefit of vessels carrying mails between this country and South America and this country and the Orient, is almost certain to be passed by Congress at the winter session, according to well-informed politicians. President Taft and leaders in Congress are said to have reached an understanding to this effect.

Owing to very encouraging market prospects, the Southwest Texas Truck Growers' association will increase its onion acreage by about 25 per cent over last year. In view of the fact that the association sold over 3,000 cars of onions last year, favorable crop conditions would put this year's output at about 3,750 cars.

Secretary Ballinger has announced the withdrawal from settlement of 2,682 acres along the White River, 20,820 acres along the Crooked River, 6,441 acres along the middle fork of the John Day River, 9,031 acres along the north fork of the same river, and 7,930 acres along the south fork. All of these lands are in Oregon and are presumed to contain water power sites.

Chancellor of the Exchequer Lloyd-George, in a statement made to the house of commons, declared that on account of the high-license measures of the government revenue from the liquor traffic would this year be only half what it formerly was. High license was causing an enforced improvement in the habits of the people, said he; in Ireland the consumption of liquor has been reduced two-thirds, and in Scotland one-half.

The recommendation of the executive committee of the American Railway association that an increase be made in the per diem rate for freight cars will probably be adopted. The present charge is 25 cents a day and the new charge will be either 30, 35 or 40 cents. The object of the increase is to insure the prompt unloading of cars after they have reached their destinations.

Charles N. Crittenton of New York, widely known as the millionaire founder of the Florence Crittenton Rescue Homes for Girls, died at San Francisco, Nov. 16, of pneumonia after being ill less than a week. He was 76 years old. Mr. Crittenton founded seventy-three rescue homes in this country and several in Japan and China, which he named in memory of his daughter Florence.

William M. Laffan, publisher and chief owner of the New York Sun, died at his county residence, Laffan House, Lawrence, L. I., Nov. 19, following an operation for appendicitis performed several days previous. Mr. Laffan was 61 years old and had been an active worker in the art and newspaper life of this country since he arrived from Ireland more than forty years ago.

In consequence of a series of conferences held at Berlin between Berlin financiers and attorneys representing American bankers, the chief difficulties in the way of apportioning the participation of each of the factors in the \$30,000,000 Chinese railway loan have been adjusted. The only question now open is whether or not bankers who participate in the loan shall be required to dispose of their bonds in their own countries. The Americans oppose this plan.

Mrs. Ella Flagg Young, superintendent of Chicago schools, has in mind plans for a radical change in the course of study in Chicago high schools. Fewer studies and more time on each one is her aim. She indicated her ideas on the subject in an address before the annual conference of high school and academy teachers at Mandel Hall, University of Chicago, and later announced her intention of applying them to the schools under her supervision.

When President Taft and his cabinet officers submit their message and annual reports to Congress, economy will be the keynote. "Carve to the bone" is Taft's order. Last winter Congress created a position for former Senator Hemenway of Indiana. He has gone over the long list of appropriations and finds that for 10 years they have increased at the rate of \$50,000,000 a year. The last session of Congress appropriated \$1,044,000,000. His report will suggest reductions in several cases. Secretary of the Treasury MacVeagh has lopped \$20,000,000 from the \$36,000,000 asked by Secretary Dickinson. It is thought prospects for liberal allowances for river and harbor work are poor.

A new trolley car is being experimented with in New York City. The new car is operated by gasoline, and is also supplied with an electrical equipment. In the event of a blockade or accident on the road, the new cars can be switched over to another track and be run by gasoline. Riding in the car is very much like riding in an automobile, there being an entire absence of the jerk which is so disagreeable in electric cars. The radiator is on the roof.

Washington, Louisiana, Mississippi, Arkansas and Wisconsin, in the order named, constitute the big five in producing the country's lumber supply, whose valuation for last year runs far above the half billion dollar mark. Texas, Michigan, Oregon, Minnesota and Pennsylvania came after the first five States, and others followed in decreasing amounts down to Utah, the lowest on the list, with Nevada and North Dakota, having little timbered area, not rated at all.

Fearing that the recent transfer of control of the Western Union Telegraph Company to the Bell Telephone-Postal Telegraph interests means the swallowing up by the big combine of the main links in the long distance service of the independent telephone system, representatives of independent companies in St. Louis, Kansas City, Detroit and Ohio and Indiana towns are planning defensive action. The independents have been holding secret meetings and the course of action that they are considering can not be ascertained.

The heads of the Catholic church in France have declared war on the French public schools. Catholic parents have been forbidden to send their children to these schools or let them study the regulation textbooks. As a result the schools are in a chaotic state and the matter is being taken into the courts. Catholic voters are urged to support only those candidates for office who will agree to protect Catholic interests. This agitation is the after-result of the severe laws passed several years ago abolishing the Catholic religious and educational institutions.

An exhibition was recently made by Mr. Louis Brennan's monorail car which, it will be recalled, is held in upright position by means of gyroscopes. Since the first announcement of his invention, Mr. Brennan has been at work developing the car to practical dimensions and the present model is large enough to contain forty passengers. The car was operated both on a straight and a circular track, and maintained its equilibrium perfectly. So sensitive was it to the shifting of the center of gravity, that when the passengers all crowded over to one side, the car immediately righted itself and maintained its horizontal position.

Much satisfaction is expressed at the way the children living along the railroads of South Africa, in the sparsely settled districts, are being provided with schooling. The government railway department has organized a system of railway schools to fit the case. Wherever the railway employes can guarantee as many as 10 pupils, a school is established, and the children are carried to and from school for some distance along the line by rail free. These railway schools are regularly inspected, and the grading is the same as in the regular public schools. There are over 50 of them now, with upwards of 2,500 pupils in attendance. The system was suggested by the central-school idea as developed in the United States.

Free art under the new tariff law is resulting in large importations. Deputy Consul General Yost at Paris has been giving attention to the matter and his records show that the exportations during the last two months are nearly 500 per cent greater than the corresponding period of last year. Taking the first two months under the present law, the authenticated invoices of works of art and antiquities of his office show an increase in exportation of exactly 461 per cent over the same months of 1908.

Some five years ago there was started in France a fight against the use of white lead in the paint, the claim being that its use was poisonous to the painters, a fact which is pretty well known. Of course there was a great deal of opposition to the effort to pass a law, but eventually it has been passed, and after an expiration of three years it will be unlawful to make use of it in painting a house either inside or out, the delay being made in order to give the manufacturers time to dispose of the product they have on hand and get into some other business. One reason why the proposed law was fought for such a long time was that while it was acknowledged that painters suffered from the use of white lead, only one in 7,000 or 8,000 died from the effects.

For the manufacture, sale, use and operation of flying machines, more particularly aeroplanes, the Wright Company of New York, capitalized at \$1,000,000, was recently granted a license to do business by the Secretary of State of New York. The directors are Wilbur Wright, Orville Wright, George A. Stevens, Henry S. Hooker of Dayton Ohio; also Cornelius Vanderbilt, August Belmont, Howard Gould, Robert J. Collier, Andrew Freedman, Morton S. Plant, E. J. Berwind, Theodore P. Shonts, Allan A. Ryan and Russell A. Alger. DeLancey Nicoll, counsel for the new company, said that one of the Wright brothers would be president, and that the executive committee would include the Wrights, August Belmont, Andrew Freedman and Theodore P. Shonts. The concern will manufacture and sell Wright aeroplanes, and also will seek to protect the Wright patents and to give the two Dayton inventors time to further develop their machine. A factory will be situated at Dayton, according to Mr. Nicoll, while the general offices will be in New York.

The final cost of the Panama Canal will total almost two and one-third times the amount adopted by Congress in 1906, according to the annual report of the isthmian canal commission, prepared by Lieutenant Colonel George W. Goethals, chairman and chief engineer, and submitted to the Secretary of War. The report is dated Aug. 20, 1909, and is for the fiscal year then ended. The total cost of the canal will reach \$375,201,000, according to the report. Of this \$297,766,000 will be the cost of engineering and construction and the balance will be the purchase price. The congressional act of June 28, 1902, authorized the construction of the canal at a cost of \$144,233,358, but a modification adopted in 1906 fixed the total cost at \$139,705,200. The increased cost of the canal is attributed to the fact that nearly 50 per cent more work will be necessary to complete the project than was originally estimated, because an increase in wages of from 30 to 60 per cent has been required and because of the introduction of the eight-hour working day. Increased wages were necessary in order to induce workmen to go to the canal zone, on account of the unsavory reputation of the isthmus in regard to health conditions and on account of the prosperous conditions in the United States.

Among the Magazines

A TEST OF TAFT'S POWER.

Friends of postal savings banks should look alive and begin a campaign at once in favor of the legislation if they want to be able to meet the strong opposition which has been organized against that pledge in the Republican national platform. Not until one makes inquiries among representative public men from different parts of the country does he realize the strength of the opposition to this legislation. The bankers have not been idle, and they have planted the seeds of distrust in the minds of many people and have seen to it that the people communicate their opinions to senators and members of Congress.

One of the most potent arguments that has been used is the statement that the postal savings banks will draw money from the country and centralize it in Washington for use in Wall Street. One public official, a man who has not given any particular attention to the subject, but who is very influential, thus voiced his opposition: "The postal savings banks will simply be like so many thousands of suckers, reaching out into all of the smaller communities and drawing the money into one place. The money will gravitate to Washington, and Washington will turn it over to Wall Street. The people do not want four or five hundred million dollars stacked up in Wall Street, which the bankers can use at any time, and will use for campaign funds to carry the country for anything they want. The bill will be beaten. All of the country bankers are against it, and they are a power in the land."

Perhaps this official did not know he was making a strong argument in favor of postal savings banks when he intimated that it would result in deposits of \$400,000,000 or \$500,000,000. That in itself is a pretty good argument, although he had been taught to twist it to mean that the money would be placed in New York. At the same time, one also can observe that it is a very insidious argument, and will alarm the business men of the small communities, who will fear that the money will be centralized and that they will be unable to get their usual banking accommodations in their towns. Of course, the postal savings banks in Canada and other civilized nations of the world have not operated on the lines suggested by the opposition, but the opposition is determined to defeat the legislation and is using arguments which facts will not sustain.

It is well known that Speaker Cannon and many of the leaders who surround him are determined to defeat the postal savings bank legislation. It is well understood that enough Republicans will be with Cannon to make it impossible for the members of that party, who believe in keeping the pledge of the platform, to pass the legislation alone. Democratic support is necessary. Southern men say that this Democratic support will not be forthcoming; that most of the representatives from the South will not favor postal savings banks or help the Republicans carry out their platform pledges. In many instances when Roosevelt was unable to get legislation he wanted from

his party, he borrowed enough support from the Democrats to secure such legislation. Several times the Republican party was forced to get together in order to avoid a split. President Taft may be able to do the same in regard to postal savings banks, unless there is a deep-set Democratic opposition to the legislation, as is claimed by many of those who oppose the measure.

At all events, the postal savings bank bill will test the power of President Taft in Congress.—*Woman's National Daily.*

RETURNERS AND RETIRERS.

Recurring to that fascinating subject, the return to the soil, there was a truly edifying recital in a far western paper recently that points a moral beautifully. The subject was a "returner" who made a deep impression on an interviewer by an apt illustration. He said that you could teach a dog all kinds of queer tricks and that the animal would learn to do them fairly well. He would never like them, however—never do them naturally with ease and pleasure. But take that same dog, one that had been trained from the time that he was a puppy and that had never been allowed to run about freely, and turn him loose in the country and he would need no instruction whatever as to chasing a rabbit. He would enter into that sport at the first provocation and then have his first experience of the joy of life.

The returner went on to say that he had done pretty well in business back East. He had learned the tricks and achieved at least a modest success. But it was not until he went to living in an orange orchard that he began to chase his rabbits. Probably he has had to chase the real thing, since rabbits sometimes show a liking for orange orchards, but, of course, he was speaking figuratively. He had found work that he loved, and, like the dog, he had entered into the joy of life after many years of waiting.

Of course he has made a success of raising oranges, and if all returners could only be sure that they would have the same zest and delight in the new employment there could never be any doubt about the wisdom of their change of work. Too many of them, however, are not real returners. They are retirers, who expect the soil to produce for them as if by magic, and who are so used to the busy haunts of men that they want to resume some of the old tricks, if not all of them. Before giving up the tricks be sure that the natural instinct is as strong as it should be to bring the longed-for joy and content.—*Chicago Record-Herald.*

ENGLAND'S GREATEST INDUSTRIAL RIVAL.

The expansion of Germany in recent years has been marked by a tremendous development in industry, and so in wealth and power. Her population has increased

by one-half since 1870, and among the leading nations of Europe her birth-rate is relatively the highest. Yet today her narrow boundaries limit her expansion to an intensified industrial life, and thus only in a mediate way can she share in the progressive development of the world. Her necessities for further growth are imperative.

Incomprehensible to many of our contemporaries, the most fabulous change is taking place before our very eyes. Mark its significance. In the eighteenth century Germany had no exports whatever to balance the importation of luxuries for her several courts. Aside from her bales of linen, the ships that left Germany went ballasted in sand,—sand which the French jeeringly called "*le produit d'Allemagne*." National poverty continued throughout the greater part of the nineteenth century. States grew up that were famous for poetry, music, philosophy; but this was for other than the creative civilization of wealth.

It was during years yet recent that Disraeli, in his "*Endymion*," pityingly pictured the German diplomat who went from the world's metropolis and its society of illustrious dames and world mastering statesmen back to his exile of home. His people's only wealth was their wooded plains and hills. They needed a fatherland got "*by blood and iron*," were his prophetic words. Today like Midas, the king, Germany touches unseemly raw stuffs and under her hand they become coinable gold,—Germany, the new industrial state, rising in greatness, and soon, perhaps, to equal the colossal power of England!

For our grandfathers such a prophecy would have seemed the illusion of madness, and yet there are Germans who doubt the future. Others of our countrymen, blinded by the glitter of the golden rain, forget the spiritual sources of the down-streaming bounty. They are wholly lost in wonder at the magical growth of our industrial life and see nothing even of political causes: Sedan and the Proclamation of the Empire, when they crowned the Kaiser in the Hall of Mirrors at Versailles.

This growth so marvelous has made Germany the first commercial and industrial rival of England in many parallel lines of production. In her exports of iron and manufactures of iron she is already a competitor on equal terms, while in the eighties she seemed left forever behind. In mere production of iron and steel she has already outstripped Great Britain. Her progress has continually been filled with menace and damage, sometimes disaster, to British commerce.

Take the single striking case of indigo,—a flourishing branch of Indian trade that has fallen to ruin. It was one of the great staples of India and had been the important means of placing the raw material production of the Indian empire on a basis of money exchange. At the beginning of the nineties the total crop of indigo was estimated from \$20,000,000 to \$25,000,000, with both culture and trade almost exclusively in English hands. But in Germany science progressed, the output of coke wonderfully increased with the spreading iron works, and the new nation acquired the raw material for manufacturing coal-tar dyes. Today the Germans by chemical processes make three-quarters of all the indigo used in the world. The total yield of indigo in India has meanwhile fallen to a quarter of its former amount. Since 1903 England has imported from Germany more indigo annually than her average yearly purchase from Calcutta in the years 1881-96.—From "*England and Germany—Peace or War?*" by Gerhardt von Schulze-Gaevernitz, in the American Review of Reviews for November.

CROPS AND CLIMATIC CHANGES.

That considerable changes in climate, during past ages, are revealed by the abandonment of cities or of whole regions, once inhabited, and by alterations in cultivated plants over large districts, has long been a widespread popular belief. If we are to credit recent investigations, however, there is really no reason for thinking this to have been the case. Such changes have uniformly been due to other than climatic causes. Says a writer in *Cosmos* (Paris, September 14):

"Explorations in Central Asia have revealed to travelers once flourishing villages now ruined and abandoned. Mr. A. Boutquin shows in *Ciel et Terre*, by historic evidence and by the scientific observations of recent centuries, that the abandonment of these regions by man is not due to such meteorological variations as the general cooling of the climate or a progressive drying-up of the globe. His investigation extends to other countries than Asia. Here are some of his remarks concerning Europe and the neighboring regions:

"A sensible variation of the temperature and a diminution of precipitation—rain or snow—should bring about a marked and continuous retreat of the glaciers. Now facts collected during more than two thousand years support no such hypothesis. Heim has proved that in the Middle Ages the Alpine glaciers occupied a much smaller area than during the second half of the nineteenth century, during which they have been retreating."

It has long been asserted, the writer goes on to say, that the west coast of Greenland has not always been uninhabitable, owing to a former more favorable climate, whence the name given to the country. But the historical investigations of Rink and Von Maurer have established the fact that the disappearance of the settlements founded by the Norsemen was due wholly to the introduction of a contagious disease and to an unfortunate governmental policy on the part of Norway, which provoked the hostility and the attacks of the Eskimos. Similarly false statements have been made regarding Iceland. Moreover:

"Wheat was formerly much more cultivated in the north of the British Isles than at present, but simply because this crop was then more remunerative. It lessened when the importation of foreign grains lowered the price. Nevertheless, it has required a struggle to enforce belief in this elementary truth; the belief in a change of climate or of weather has long been much stronger than the evidence. The same is true in Belgium and other countries, where the crops have changed almost entirely under the influence of economic laws, of better management of the soil, or of a more intelligent selection of products to be cultivated.

"In the Middle Ages, and up to the fifteenth century, the vine was cultivated in Bavaria and in the other regions of Germany, as in Belgium; it has almost entirely disappeared in our own day. Climate has nothing whatever to do with the change. The wine produced was generally of mediocre quality, and taste having improved, consumers preferred imported wines or the good beer that brewers had learned how to make.

"In Belgium there are still vineyards. Many persons doubtless do not know that the vine is still cultivated . . . at the Abbeys of Auerbode and Tongerlo, where the wine as obtained is used in the celebration of the mass.

"The investigations of Dufour have also established that, contrary to general belief, the olive has been raised in Switzerland, although they grow only in gardens and there

are still only a few orchards, which would die if not carefully cultivated. In regard to all other cultivated plants, the situation has not varied."—Translation made for the Literary Digest.

FINDING MONEY IN UNEXPECTED PLACES.

OLD stockings are proverbially the saving banks of the poor—and no interest on deposits. Today, when all towns have their banks, the family hoard is usually more safely placed than in a domestic cranny.

Queer hiding-places are, however, still uncovered. There are savers who will not trust the banks. An English exchange, having collected facts in a number of cases where money has been found in very strange places, presents the following interesting incidents in this way:

A few months ago a dealer in old furniture secured for thirty shillings, at an auction held at Llandrug, a village near Carnarvon, Wales, an oak dresser, part of the property of an old lady who had just died. On his arrival home he proceeded to overhaul his purchase, when to his surprise he discovered, on the top shelf, a mustard-tin filled to the brim with sovereigns and half-sovereigns.

An old bicycle was not long since knocked down to a gentleman for a mere song. In due course it was sent to a cycle repairer in Hampstead to be put in working order. During this process nine half-sovereigns were found concealed in the handle-bars.

In October of 1899 a gentleman residing at East Dulwich purchased at a local auction-room for a few shillings a parcel of second-hand books, among which was an old Bible. On the following Sunday his wife, on opening this, found several of the leaves pasted together. These she took the trouble to separate, when six £5 Bank of England notes dropped out. On the back of one of these notes the former owner of the Bible had written his will, which ran as follows: "I have had to work very hard for this, and having none as natural heirs, I leave thee, dear reader, whosoever shall own this holy book, my lawful heir."

A curious law case was heard recently in the Lancashire County Court. A widow, residing at Hartlepool, bought a picture, which besides being very old and dusty, was further disfigured by a most unsightly frame. The woman, however, took the trouble to clean her purchase, when between the frame and the canvas were found seventeen £5 notes. Overjoyed at her good fortune, she noised abroad her discovery, which coming to the vendor's ears he laid claim to the money. On the purchaser refusing to fall in with his views, he appealed to the law, with a result, however, that ran counter to his hopes.

On the appraisers of the estate of an old miser, who died a year or so back at New Burgh, searching his house they came upon an old cupboard seemingly filled with rubbish. This they overhauled, to find in a corner

a family of young mice comfortably ensconced in a nest constructed of bank-notes to the value of £400.

A mouse was the cause of a still greater find. As an old Paris hawker, named Mme. Jacques, was endeavoring to dislodge one of these little animals that had taken refuge in her chimney, she knocked aside some bricks and laid bare a cavity containing a number of bank-notes, amounting in value to £1,600, which had belonged to a former tenant of the house, who had died seven years previously.

'Tis an ill-wind that blows no one any good. Some time ago an old Birmingham woman, who had the misfortune to lose her leg, purchased a pair of crutches at a second-hand dealer's. Not long after one of the crutches snapped beneath her weight, disclosing a hollow in the wood, within which were secreted £20 in notes and a diamond scarf-pin, which was sold for as much more.

Among a quantity of household effects, forming one lot, that a gentleman purchased some years since at a sale in Kent, was a stuffed parrot. This being of no value was given over to his children, who, after the manner of their kind, proceeded in due course to inspect its anatomy. Curiosity in this case met its reward, for within the bird reposed fifteen sovereigns and two spade guineas of George III—no bad return for the few shillings invested originally in the purchase of the entire lot.—*The Scrap Book*.

Between Whiles

Doctor—So your insomnia is not quite so bad, eh?
Patient—Not quite, sir; sometimes my foot goes to sleep now.—*Boston Transcript*.

Keeping on the Safe Side.

Every new reporter is duly cautioned against the enormity of his offense if one of his statements should be made the basis of a libel suit. One young man made up his mind to take no chances.

Said the editor: "You must learn never to state a thing as a fact until it has been proved a fact. Do not say, 'The cashier stole the funds.' Say, 'The cashier, who is alleged to have stolen the funds.' That's all. Now get something about the first ward social tonight."

And this is the report turned in by the young man who heeded the editor's warning:

"It is rumored that a party was given last evening to a number of reputed ladies of the first ward. Mrs. Smith, gossip says, was the hostess, and the festivities are reported to have continued until half past eleven in the evening. The alleged hostess is believed to be the wife of John Smith, the so-called 'low price grocer.'"

ON THE SWEET GRASS

J. F. Appleman and wife, Plymouth, Ind., and E. E. Arnold, Elgin, Ill.

Glass Brothers Land Company, Big Timber, Montana.

Big Timber, Mont., May 8, 1909.

Gentlemen: I have taken several days in looking over Sweet Grass County, Montana, and have looked over your irrigation project. I have been careful in my investigation, looking into the grain, stock and fruit raising, and must say that I am more than pleased with what I have found and wish to recommend same to my friends; and I also feel that anyone looking for a home should not wait until tomorrow, but go now as these lands will surely be sold in a short time on the liberal terms you are offering settlers. The lands and irrigation works are far better than you have told me.

Thanking you for your kindness, and wishing you success, I am,

Yours truly,

(Signed) J. F. Appleman, Plymouth, Ind.

Formerly State Superintendent of the Mexico (Ind.) Old Folks' & Orphan Children's Home.

Glass Bros. Land Co., Big Timber, Mont.

Elgin, Ill., Oct. 18, 1909.

Gentlemen: It was my pleasure to spend several days investigating your lands and irrigation project in Sweet Grass County, near Big Timber.

The longer I looked the better I was impressed with the possibilities of the country. Alfalfa fields were the finest I ever saw. Oats, wheat and other grains were in abundance. I am fully convinced that apples will grow to perfection there. Wherever orchards were seen the trees were full of perfect apples and not a wormy one could be found.

Your irrigation system is well constructed and my opinion is that it will supply more than ample water for your lands.

I was so well pleased with the conditions and possibilities of the country that I purchased 160 acres and propose to put a tenant on it and improve it, and also expect to put at least 19 acres in apples in the spring.

Persons desiring to better their conditions should investigate your lands. Your terms of sale are very liberal.

With best wishes, I am,

Yours very truly,

R. E. Arnold.

We invite you to investigate the possibilities of these lands.

For price, terms, etc, address,

GLASS BROS. LAND CO.

BIG TIMBER, MONTANA.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

**BRETHREN PUBLISHING
HOUSE**
Elgin, Illinois

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

SPECIAL TERMS TO AGENTS ON REQUEST

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

CALIFORNIA HOMES . . .

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. California appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"The Alfalfa shown above was cut five times this season, as follows, May 20, yield 8 tons, July 1, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.

J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.

C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, rates for homeseekers.

Read and Learn

OF THE

Great Future for Miami Valley

in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

FARMERS DEVELOPMENT COMPANY
Springer, New Mexico.

The Story of the Life and Sermons of Elder James Quinter

By Charles Foster.

A Child's Life of Christ, printed in short, easy words. The language is so simple as to be easily understood by any child. The pictures illustrate the most important scenes. The events as related in the Four Gospels are not repeated, but the details of each event are placed in their proper order, thus making one full, complete and interesting account of the Life of the Master.

The value of this book to those who wish

to instruct the young in the truths of the Bible can scarcely be overestimated. Its very general use, and the sale of more than 180,000 copies is proof of its merit and popularity. Bound in fine cloth, stamped in gilt and colors; with ornamental design. One hundred and fifty illustrations. 366 pages.

Price, postpaid, 62 cents.

THE SPIRIT'S SWORD

For all Ministers and Personal Workers

By Evangelist J. R. Beveridge.

Vest Pocket Size, 2 3/4 x 5 1/2 x 1/4 inches; 128 Pages; 1,200 Scripture References; 133 Subjects. Special Notes.

Synopsis of Contents.

Importance of Personal Work. Personal Experience and Equipment in the Holy Spirit, the Word of God, Prayer and Faith. Personal Conduct in Dealing with Souls. How to Approach Persons. How to Get Cases. The Fundamentals of Salvation Texts for Christians under All Conditions of Sin. The Natural and the New Heart. The Way of Life and the Way of Death. Hell. Answers to Nearly Every Question Asked by Skeptics, and all Classes of Unconverted. False Hopes Swept Away. Guidance for Those Seeking to Find Christ. The Holy Spirit, Acts to First John. The Divine Nature of Christ. The Human Nature of Christ. A Personal Devil. Bible Readings on Prayer and Thanksgiving.

Price, by Mail, Prepaid.

Red Cloth, Embossed and Stamped in Black,25 cents
Red Morocco, Embossed and Stamped in Gold,35 cents

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA, IDAHO.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Scam, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 49.

THE GREATEST PROFESSION IN THE WORLD

BY JOHN WOODARD

THERE is an idea among some people in America that farming is an occupation of inferior degree. Anyone can be a farmer, they think, but it takes a man of brains to be a lawyer or a doctor. It is hard to tell where this idea originated, but it probably started with some one about as well informed as the woman who saw some white hogs and asked what kind of animals they were. "They are hogs," was the reply. "Oh," she said, "they must be quite old; they are turning gray."

It doesn't make much difference what these people think of the farmer, their opinion is not worth considering. But some of the country people, especially among the boys and girls, have accepted this idea and they want to get away from the drudgery of the farm and go to the city. They think they have too much ability to waste their time and talents in the country. Some want to be merchants, doctors or lawyers while others are content to become bricklayers, carpenters, or plumbers, but all think they are entering occupations of higher degree where there is more opportunity for men of ability and where they will make a better living and enjoy themselves more.

During the last few years, a great deal has been said about, "keeping the boy on the farm." We have concluded that too many of our country boys (and girls too) are going to the city and we should do something to keep them in the country. Is this a good thing to do or had we better keep on sending them to the city? If farming is an inferior occupation and there is more opportunity for persons of ability in the city, it would be hardly right to keep your bright boy out in the country and make a drudge of him when he could do better in the city. But, if, as we have believed, farming is as honorable and dignified as any occupation and has as many opportunities as any other, the movement is a

good one and we should encourage it. Then let us investigate the subject and see if agriculture is an occupation that we can encourage our brightest young people, both from country and city, to engage in.

All industrial activities are for the purpose of supplying man's wants. Food is the most pressing want. So man's first industrial activity was getting a supply of food. Undoubtedly man's food at first consisted of nuts and fruit which he found growing wild and collected as he needed them. From collecting the wild fruits and nuts it was but a step to planting a few trees where they would be handy when it was difficult to collect wild fruits. Soon man learned, probably by accident, that flesh was good to eat, so he became a hunter and from hunting it was but a step to the domestication of some of the wild animals which would come in handy when the hunt was unsuccessful. Of course, agriculture at first was crude. Very little attention was paid to the trees except to pluck the fruit when ripe and all the care the stock had was to keep them from wandering too far. But as man spread out and occupied new sections of the earth, he found new conditions. The old methods of getting a living were unsuccessful in his new surroundings, so he had to try new methods. Every new difficulty caused man to devise methods of overcoming it. This was one great factor in the progress of man. Another was the multiplication of wants. When man had secured sufficient food, other wants appeared and, when they were satisfied, still others appeared. These two factors worked together to bring about progress. When man prospered, he developed new wants and, when hard times came, he had to give up some things which he had been enjoying or else devise methods to procure them in spite of the hard times. It is not difficult for man to get along without things that he never had,

but he finds it very hard to part with things which he has begun to consider a necessity. A man who has never had a watch gets along very well without it, but the man who has carried a watch for some time thinks he can't get along without it.

With the multiplication of wants came not only better farming but the building of houses and other occupations. At first each individual farmer carried on all of those activities for himself, but in time it was found that a man could build better houses if he gave all his time to building, so some gave up farming and gave all their time to building, thus leaving the farmer more time for his farming so he could raise better crops and stock. From time to time other occupations ceased to be carried on in the farm home and were engaged in by those who worked at nothing else. Industry became more and more complex and specialized.

At first all men were farmers and each supplied the necessities of his family, but, with the specializing of industry, part of the population ceased producing food products and produced other things which they gave to the farmer in exchange for food. Thus the farmer had to raise more than he needed for his own use. The per cent of people engaged in agriculture has constantly decreased while the per cent engaged in other pursuits has as constantly increased, but the farmer still has to feed the world as he did when all were farmers. From this, it is evident that the number of people each individual farmer must feed has constantly increased. At first he produced food only for his family; now he produces food for many more. It is quite evident, then, that agriculture has improved along with the improvement of other industries and it must continue to improve or we will not be able to feed the world. That is why we have farmers' institutes and agricultural colleges. That is why we are trying to introduce agriculture into the high schools and even the elementary schools. We didn't need them at one time. We could produce enough without, but now the burden laid on the farmer is so great that he needs all the training he can get to carry it. If the farmer fails to feed the world we will have famine. India and China and Russia have famines because their farmers sometimes fail to raise enough to supply those nations, and whenever the United States fails to raise enough to feed the nation, we can look for famine.

All farmers have not developed as rapidly as they should, nor have all in other occupations. But we can truthfully say that the best of our farmers have developed as rapidly as the best in others lines. And they must continue to develop as rapidly as other industries or disaster will follow. All other industries depend on agriculture. Agriculture could get along without the other industries, but it would be primitive agriculture. It would be a return to barbarism. No modern industry can exist alone. They are all interdependent.

But agriculture is the central one on which all the others depend. Industry is like a tree of the conifer type. It starts with a root and straight stem without branches. Later branches appear and these branches give off other branches, but all the time the straight central stem continues to grow, keeping ahead of the branches. If you destroy the stem you destroy the tree. If you damage the top of the central stem so the branches grow faster than it does, the symmetry of the tree is spoiled. The same would be true if any of the side branches were lopped off. Agriculture is the stem and other occupations are the side branches. As the destruction of the true stem destroys all the branches, so the destruction of agriculture would be the destruction of all industry. And, as the injury of any branch damages the whole tree, so the injury of any industry damages the others.

Then there should be no quarrel between industries. Helping one helps the others and they must all advance together. Business men, lawyers, doctors, and those in other professions and trades should help provide training schools for farmers as well as for their own professions and trades, and farmers should help provide training schools for other professions and trades.

Shall we keep the boy on the farm or let him go to the city? That depends on the boy. As the population of the world increases, the number of people engaged in farming will not increase as fast as those in other occupations. The city population will increase more rapidly than the country population. Some of the country people will have to move to the city. Which ones they will be will not depend on their ability but their liking for and fitness for certain occupations. There are boys born on the farms who will make greater success in other lines than farming, and there are boys in the cities and towns who will make a better success as farmers than they would in any other occupation. And the same could be said of the girls. A person's birthplace does not need to determine his or her occupation. What we need is a system of education that will make it possible for every boy and girl to find out what he or she is best fitted for and then study to fit himself or herself to engage in that chosen occupation, whether it leads from the country to the city or from the city to the country.

Everyone should choose his occupation for himself or herself. All that others should do is to present the merits of certain occupations so they can choose intelligently. We don't want to decide anyone's occupation for him, but we do want to show him the merits of farming so he can tell whether he is better fitted for it or something else. And when we invite anyone to investigate the merits of the country life we may know we are inviting him to enter the greatest profession in the world. The opportunities for the farmer are as

great as those in any other occupation and as great ability is needed. There is not the chance of making great fortunes like there is in other occupations, but there is not the chance of making as great failures. But after all, is money the chief end of life? Is a great fortune a blessing or a curse? A great fortune removes the necessity of making an effort and progress comes through the necessity of making an effort. This is why so many rich men's sons never amount to anything. Much better than a great fortune is an occupation that yields a good living and leaves time for one to enjoy it. There is no occupation in which a larger per cent of the people engaged in it acquire such an income than in agriculture.

A GAMBLER'S ADVICE.

G. WILFORD ROBINSON.

A NOTED gambler was dying. Lying in a snowy white bed in a cozy room of his palatial residence he told a reporter what he thought of the future—his future.

"I know I will get a square deal," he said. "I'll have as good a chance as I ever had in this world—better, for the Maker plays no favorites.

"I've been a gambler. So are most all men. Most business is a form of gambling. Think of Wall Street."

But this knight of chance looked upon this profession as an unprofitable one, for he says: "The higher you go the lower you go; the more you succeed the more you fail."

He was asked if a boy came to him for advice what he would tell him. As his head sank deeper in the big pillow he said:

"There wouldn't be any use giving it—he wouldn't take it, but I would. I'd say: 'I can't tell you what to do, for no two people in the world are alike. You'll have to find your work for yourself.' But I'd say to him, 'Take any road but the crooked one.'"

What better advice could be given to a young man as he starts out in life's career?—Take any road but the crooked one. This advice is valuable, for it is from one who knows. It is from one who has stood in the vortex of the exciting game. It is a warning from one who has felt the scorpion's sting and whose pangs are alleviated (if alleviated at all) by the thought that he will at least get a square deal.

There is a crooked road and it is a dangerous one. This fact is attested by the wrecked lives that are strewn along the way, and the mariners on life's voyage should mark on their chart the hidden rocks and perilous shoals which have been the destruction of those who have gone before.

Gambling is a reef on which hangs many a wrecked life who otherwise might have made a safe voyage if

he had not been tempted by the exhilarations of the game. Many a promising youth who has been allured by this temptation, and whose manhood and character is now gone, can trace the cause of his wrecked life back to the time when his passions were aroused by the winning of a stake on some small game of chance.

Young man, if you are indulging in this vice you are on the crooked road. Your eyes will lose their honest glance; your heart will lose its purity. Your whole life will be blighted and you will be utterly duped in the end. Then when the last game is played, and the stakes are won, and life is over, you will find that the Arch-gambler has been the winner and your soul has been the stake.

The dying gambler may not have practiced what he preached, but his advice is good,—“Take any road but the crooked one.”

IN THIS WORLD OF TROUBLE.

NANCY D. UNDERHILL.

How we worry, chafe and moan,
In this world of trouble.
How we grumble, grieve and groan—
Make our suffering double.
We make so much of sorrow,
And oft are caught in strife:
We look ahead to borrow
Some care to last through life.
Small slights were scarce intended
To crush, or harm, or grieve:
Small hurts might soon be mended—
Forget them and forgive.
So let us cease to wonder
That many souls are sad:
So oft we err or blunder—
Henceforth, let's make them glad.
And let us not be fearful,
But smile away the blues:
We should be always cheerful—
Paint clouds with rainbow hues.
And when we reach life's sunset,
We'll see 'twas better so:
The glory is to come yet,
In God's land, where we go.

CHINESE PROVERBS.

1. The gem cannot be polished without friction, nor man perfected without adversity.
2. What is told in the ear is often heard a hundred miles off.
3. A wise man forgets old grudges.
4. Riches come better after poverty, than poverty after riches.
5. A bird cannot roost but on one branch.
6. When a pool is dry, the fish can be seen.
7. You cannot strip two skins off from one cow.

Historic New England

T. H. FERNALD, BELFAST, MAINE

Chapter IV.

IN the year 1635 about three thousand colonists led by Hugh Peters and Henry Vane arrived in Massachusetts. The Puritans in England had come to see that it was worth while to live in a country where the principles of freedom were rapidly spreading. The settlements of Massachusetts Bay were for awhile overcrowded. Those of more adventurous spirit plunged into the wilderness to find homes. Simon Willard with a company of twelve families marched through the woods until he came to open meadowlands, sixteen miles from Boston, where they laid the foundation of Concord. Another colony of sixty persons marched westward, the same year, to the Connecticut River and in the spring founded Windsor, Hartford, and Wethersfield.

The Puritans came to America to enjoy freedom of conscience, but were not willing for others who differed from them in belief to enjoy the same privilege. All must be Puritans and worship as they did. None but their church members could vote. A minister named Lyford who was sent from London to the Puritans, was refused and expelled from the colony because he favored the Church of England. Two members of the Endicott council were arrested by him and sent back to England as "factious and evil conditioned people," because they used the liturgy in their worship. The Puritans were without a pastor for eight years. The ruling elder and other brothers exhorted on Sabbath afternoons, at which time "a question was propounded, upon which all spoke who had aught to say." They did not think that the thing most needed was tolerance for others. Bigotry and narrow-mindedness had been inherited from the middle ages and was not easily cast out. The colony suffered from religious dissensions after the first year of its planting. It was the great delight of these fathers and mothers to discuss issues which were impossible to settle. The conversation of those who built the houses was about difficult questions of theology. The sermons preached by the ministers had to pass the ordeal of criticism and review.

Toleration was not one of the virtues of that age, and the Puritans of Massachusetts Bay were more exclusive than were those of New Plymouth. They at once built a civil government upon the church. Con-

gregations were organized in every settlement and only members of the church were allowed the rights of citizenship. Church membership was not an easy thing to possess. It required a public avowal of religious experience to which everybody would not submit. Ministers had the right to reject candidates of whose conduct they did not approve or whose opinion they distrusted. Not over one-fourth of the adult population was ever admitted to the church. Much less than one-fourth of the male adult population were qualified to vote. This stern theocracy, armed with the scourge, branding iron, and the halter, exerted the gloomiest but not the severest despotism to which an English people ever submitted. It was really a usurpation. This condition seemed to be maintained by the cordial consent of the majority, who, if they wished might have put an end to it all. When it was finally put down, it was by the Crown and not the Puritans.

In all the Puritan communities the introduction of the Church of England was an object of much dread, and "prelatists" were punished or expelled as unfit to inhabit the colony.

Though morose, superstitious, bigoted and severe the Puritans showed from the first some of the highest qualities of the founders of a free state. With the Virginians they represented the chief sources of the national life. The contrast between these two classes of people could be no more striking and picturesque, yet they had many things in common, especially their brave and self-reliant spirit. The Puritans had less sense of personal liberty but more desire for political independence. Their civil government being founded upon the church, and the church adopting the Congregational practice, each settlement enjoyed to a certain extent a system of home rule. The development of the self-government of the towns was easy and rapid. Jealousy of the interference of England grew into an ardent attachment to the principles of political freedom. The people of New England were industrious, enterprising, and full of resources.

Under these circumstances the bolder minded tended strongly to larger religious liberties. Such persons, however, were under the rule of the more orthodox, and particularly of the preacher. This condition of affairs led to the expulsion of Roger Williams from Salem.

In the ship with Henry Vane came Mrs. Anne Hutchinson, a woman of great gifts, who was a great believer in religious freedom, claiming that it meant that others had the same rights to religious beliefs as they themselves, and she was said to "be as bad as Williams or worse." She claimed the right to be heard at the weekly meeting, saying she was moved by the spirit, but she was refused that privilege by the elders. They claimed that women had no right at the assemblies, and that most of them needed their tongues bridled at times, like common scolds. Mrs. Hutchinson became the champion of her sex, denouncing the ministers for "defrauding women of the benefits of the Gospel." She called them Pharisees, and she was

made more severe, but others rushed forward to brave the terrors. The Assembly of the United Colonies was called together, and Massachusetts was advised to pronounce the death penalty against these disturbers (?) of the peace.

The tidings of the end of the English commonwealth, and that Charles II, who had long been a fugitive from his father's kingdom, was restored to the throne, reached Boston. It was now the turn of those who had overthrown the monarchy and trampled the people under foot, to fly for their lives. Edward Walley and William Goffe, two judges who had passed the sentence of death upon Charles I, came to Boston, where they were received with courtesy by Gov. Endicott. They were followed by the agents of the British government.

These "king-killers," as they were called, escaped the officers and made their way to New Haven, where they were concealed for weeks—no one, not even the Indians, telling of their hiding places. They at last reached Hadley in the Connecticut valley, living in seclusion the rest of their lives. When the savages attacked the village of Hadley, Goffe came from his hiding place. On Fast Day, June 12, 1676, the Indians surprised the people of Hadley, while at church. Seizing their muskets at the sound of the savage war whoop, the men rushed from the meetinghouse to fall into line. The foe was on every side. Confused and bewildered

the settlers were about to give way, when a strange old man with long white hair and in ancient dress appeared among them, and giving a quick, sharp word of command, recalled them to their senses, and following their mysterious leader they drove the enemy before them. The danger being past they looked for their deliverer, but he had disappeared as mysteriously as he came. The good people believed that God had sent an angel to deliver them. History reveals the secret. It was Colonel Goffe, who was fleeing from the vengeance of Charles II, with a reward for his capture, and who had for years wandered about living in mills, caves, and any place he could find, but had at last found refuge in the home of a minister at Hadley. From his window he had seen the Indians stealthily coming down the hill, and being anxious to do one more good deed for God's people, he rushed forward from his hiding place, led them on to victory and returned to his retreat, never to return. He was supposed to have died in 1679. The others also lived in seclusion. At one time they were nearly caught. They

The Old Witch House (Built in 1636), Salem, Mass. From an Old Photograph Taken 1860.

in turn declared unfit for the society of Christians. She was banished from Massachusetts, as were others. They made their way to the home of Williams. A Narraganset chief, Miantonoma, gave them a beautiful island which was called Rhode Island, and in March, 1641, they founded a little republic of their own.

In July, 1659, the first Quakers arrived in Boston, among them being Ann Austin and Mary Fisher. It seems very strange to us that the coming of such an innocent people would have created such a great dread. The plague in their midst would not have caused more alarm. These women were caught and searched for traces of witchcraft, their trunks broken open, their books burned, and they put into prison. After several weeks they were released but were driven out of the colony. Others who came were whipped and exiled. But they constantly returned, glorying in their sufferings. After four had been executed the people began to consider them as martyrs, and gradually relaxed their persecutions. The laws against this people were

were sitting under a bridge which crossed Mill River, and their pursuers passed over the bridge, not seeing them. The names of these three judges have been given to two avenues and one street in New Haven, Connecticut. The cave in which they lived for some time, has since been called "Judges' Cave," and is regarded with great interest by the inhabitants.

King Charles II sent a royal commission to America to settle all disputes and questions of intercolonial controversy that might come up in the colonies. They arrived in July, 1664, but were treated so coolly by the people who quickly understood the meaning of this act, that they were obliged to return home.

After this the people had rest for awhile, but as soon as James II came to the throne the old charter of Massachusetts was revoked, and all the colonies from Nova Scotia to Narraganset Bay were united in one, and Joseph Dudley appointed Governor-general or President. New England not being able to openly resist this encroachment upon their liberty dissolved

the Colonial Assembly and returned sullenly to their homes. Sir Edmond Andras was appointed royal governor the next year, and his rule became so odious that when the news reached Boston that King James had been expelled from the throne of England, the royal governor received the same fate from the hands of the colonists. Every colony had its freedom again in less than one month.

The conflict which was ended by the treaty of Ryswick involved the English possessions in New England, and in 1697 the boundary lines of these colonies were established as before.

Massachusetts possessed a thriving commerce—built ships in her first year after settlement. In spite of the Navigation Act the Colony opened trade with the West Indies. An English officer who attempted to enforce the act was forced to return home. Charles II seized upon this excuse to make Massachusetts a royal province. He died before his plans were completed.

LITERARY STYLE OF NATHANIEL HAWTHORNE

W. ARTHUR CABLE

MANY and varied have been the appellations conferred upon the subject of our sketch, Nathaniel Hawthorne. "America's prose writer," "a profound anatomist of the heart," "a dweller among visions," "moralist of moralists," and a host of others of rare significance, clearly interpret the author's literary achievements. "The last wizard of Salem" seems a fitting designation of his magic power to penetrate the secret recesses of the soul, and bring forth some new truth which is scarcely capable of human conception.

After reading a tale from Hawthorne's works, we are apt to say, concerning some psychological principle which had never before been presented to our mind in any form whatever; and which, indeed, upon first thought seems incapable of consideration: "Now I see through a glass darkly."

In continually dealing with the vague questions of conscience; viewing human brotherhood through the medium of the unspeakable which pervades humanity; and permeating the ethereal universe in which all creation is enveloped; the chronicles of that mind, even though he choose the fittest words conceivable by mortal whereby to express his emotions, will of necessity seem weird and fantastic to our less creative visions, and all the more so, because of the intense imagination which this recorder of wonders possessed.

For he has been holding intelligible yet indescribable intercourse with that same infinite medium. Indescribable, I say, for his writings, no matter to what wild heights your mind may have been carried by them, are the merest symbols relative of the commerce existing between the two.

Hawthorne's works may be divided into two classes. Tales and Romances. Both are substantially alike and they differ chiefly in that the latter are greatly elaborated and contain a sharper delineation of character. The former were written at various times, the last to be completed being "Tanglewood Tales," which together with the "Wonder Book," comprise a delightful series of Greek and Roman myths. "Twice Told Tales" and "Mosses from an Old Manse" entertain high ideals, and many and valuable are the lessons which they contain. They are characterized by New-comer as "running through the whole gamut of fancy, from the wildly whimsical and humorous to the intensely sombre and profoundly sad. And woven into them, as the very life and substance of them, are speculations upon many of the gravest problems of existence. Indeed, more of the spiritual history of New England may be found in a single tale like 'Young Goodman Brown,' or 'The Minister's Black Veil,' than in a hundred sermons of the theologians."

The four completed romances deal with the various

phases of sin. The greatest of these and also unparalleled in imaginative prose writings, is "The Scarlet Letter." The central truth of the tale is "the effect of sin upon opposite natures."

But let us consider the first title cataloged which is applied to this man of letters. And the best method of convincing anyone of its truth, is to quote a selection. The following is an extract from "The Intelligence Office," and tells of some of the wishes recorded in the great folio volume:—"Old people wished for the delights of youth; a fop, for a fashionable coat; an idle reader, for a new novel; a versifier, for a rhyme to some stubborn word; a painter, for Titian's secret of coloring; a prince, for a cottage; a republican, for a kingdom and a palace; a libertine, for his neighbor's wife; a man of palate, for green peas; and a poor man, for a crust of bread."

Notice the picturesque style, the extensive yet harmonious deviations of that following each other in rapid succession. Newcomer's specification of the author's whole writings might well be applied to the foregoing. "Airy, sparkling, graceful, flowing, pellucid, . . . Hawthorne plays upon language as upon an instrument of many stops, and the swiftest changes, from irony to pity and from humor to pathos, are made without a discordant note."

Again, he was called "a profound anatomist of the heart." He had the rare gift of penetrating to depths of heart which none else dare attempt, and of pointing out the pure and the evil tendencies, with appalling exactness and surety. Take, for example, in "The Artist of the Beautiful," the yearning after friendship of one whose lot is apart from the multitude; or the repeated fits of sadness and melancholy shivering the soul of one baffling with the coarser elements in his strenuous endeavor to add to the beautiful; also the danger of the finer sensibilities when in contact with the sensuous, material coarseness.

Or again, consider "The Bosom-serpent" which you recall with a convulsive shudder akin to those caused by Poe's tales, or such as Aylmer suffered as often as his eyes fell upon the birthmark on the cheek of his pure wife. Remember the Egotist in his torment! And what expression could one imagine to be better suited to the agony than that which so often escaped Roderick Elliston's lips: "It gnaws me! It gnaws me!"

If you doubt Hawthorne's visionary ability, and have but a few minutes to spend off this material earth, visit the man of fancy, who resides in the realm of Nowhere. Banquet, along with his "Select Party" at his castle in the air; and do not fail, during your sojourn there, to read "the untold tales of Chaucer's Canterbury Pilgrims, the unwritten cantos of the 'Faerie Queene,' the conclusion of Coleridge's 'Christabel,' and the whole of Dryden's projected epic on the

subject of King Arthur." Or if you wish to live beside yourself and not in the least suspect that you are near at hand, delve into the pages of "The Scarlet Letter."

Moralism was with the writer a native trait, and one well improved. The "pearl of great price" which he possessed did not escape him through neglect as it did the man of woebegone and downcast look, who sought his lost treasure at The Intelligence Office.

Cast an inquiring glance over "The Virtuoso's Collection." Observe closely the fire stolen by Prometheus, and behold the scene with the author:—"I gazed into the fire which symbolically was the origin of all that was bright and glorious in the soul of man, and in the midst of it, behold! A little reptile sporting with evident enjoyment of the fervid heat. It was a salamander. 'What a sacrilege!' cried I, with inexpressible disgust. 'Can you find no better use for this ethereal fire than to cherish a loathsome reptile in it? Yet there are men who abuse the sacred fire of their own souls to as foul and guilty a purpose.'"

But to "The Birthmark," which caused Aylmer so much worry, and the removal of which brought death to his wife. We perceive from this the magnifying and enlargement in one's mind of one little fault, until all good qualities are lost to view.

Now "Feathertop" can live his short life over again. We will let the two following quotations speak for themselves:

"Amid the general admiration excited by the stranger's appearance there were only two dissenting voices. One was that of an impertinent cur which, after snuffing at the heels of the glistening figure, put its tail between its legs and skulked into its master's backyard, vociferating an execrable howl. The other dissentient was a young child who squalled at the fullest stretch of his lungs and babbled some unintelligible nonsense about a pumpkin."

And a little farther:

"There was a mysterious kind of a smile—if indeed it might not better be called a grin or grimace—upon his visage, but, of all the throng that beheld him, not one individual appears to have possessed insight enough to detect the illusive character of the stranger, except a little child and a cur dog."

Now see the apparition,—if I may term him such,—wooing the Governor's pretty daughter, and the author comes forth again. "O, pretty Polly Gookin! Why should these imps rejoice so madly that a silly maiden's heart was about to be given to a shadow? Is it so unusual a misfortune—so rare a triumph?"

Mother Rigby strikes a voluminous chord when she says: "There are thousands upon thousands of coxcombs and charlatans in the world made up of just such a jumble of worn-out, forgotten and good-for-nothing trash as he was, and yet they live in fair re-

pute, and never see themselves for what they are."

"The Intelligence Office" is well worth studying again. Give ear to the man begging for the pearl of great price. He has said before, "While I possessed it, the contemplation of it was my sole and sufficient happiness." But now the Intelligencer calmly replied to the pleading man: "You have no greater claim to it—nay, not so great—as any other person. I cannot give it back." We learn that whatever talent has been given us, it is our serious duty to immediately go to work, and with Longfellow, "act—act in the living present"; not waste the most precious part of our life in dreaming about out endowments, for "from him which hath not shall be taken away, even that which he seemeth to have."

Unto a searcher of tomorrow the man of intelligence said: "Continue your pursuit, and you will doubtless come up with him; but as to the earthly gifts which you expect, he has scattered them all along a throng of yesterdays."

The humor, sly, and subtle, should not in the least be left out of range of this discussion. One illustration, a wish recorded in that great folio volume, must suffice:

"An astronomer who lived far more among the distant worlds of space than in this lower sphere recorded a wish to behold the opposite side of the moon, which, unless the system of the firmament be reversed, she can never turn towards the earth. On the same page of the volume was written the wish of a child to have the stars for playthings."

Observe now a few philosophical statements. The first from Hawthorne's own lips, recorded in "Fancy's Showbox": "Man must not disclaim his brotherhood, even with the guiltiest, since, though his hand be clean, his heart has surely been polluted by flitting phantoms of iniquity."

Conway says: "His writings are overcast with the pain of a heart held under a necessity to expose its innermost recesses to the world."

The tribute paid by Miss Tappan, "His narratives are one-tenth matter and nine-tenths spirit," is a true complementary.

Scottville, Michigan.

THE PEN.

M. M. WINESBURG.

The artist paints, the sculptor chips
His blocks of wood and stone,
But the pen describes and a record keeps
Of what the world has done.
Some pens portray in vivid shades
Human life in the cities fair;
The deeds that darken the city's slums
Or the rose in beauty's hair.

They who were born on the mountain heights
And watched the sun's first glow,

And saw the mists like a silver veil
Arise from the valleys below,
Are at home amid the rocks and glens
Where nature's pulses thrill;
They claim a part in the woodland wild
And a friend in each gushing rill.

And those who have watched the sunset's glow
Across the rolling plain,
And saw its crimson shadow fall
On fields of golden grain,
Can best describe the beauties there,
'Mid the scenes they love so well,
And can make us see what they have seen,
As they their story tell.

And they who breathe the salt sea air,
In a home by the ocean wide,
Can tell us best how the breakers roar—
Of the rush of the wind and tide;
Can tell us best how the soft waves splash
On a golden summer's day,
As they ripple and curl on the soft sea sands
Like a dimpling child at play.

The artist and the sculptor's work
May faded and crumbling lie,
But the noble thought the pen inscribes
Is work that can never die.

A FEW FREAKS OF FASHION.

JOHN S. FERNALD.

THE present attenuated style of women's dress recalls to people of the older generations many extremes adopted by American women at the behest of Dame Fashion. The illustrations here given are not cartoons from the so-called funny papers, but are reproduced from the leading fashion magazines of the country at the times they represent. These extremes were not confined to the young and giddy nor to the ultra followers of fashion, but prevailed in all classes of society. The first ladies of the land wore the crinoline in its extreme form as is seen from photographs of Mrs. Abraham Lincoln, Mrs. U. S. Grant, and the wives of other distinguished officials and diplomats. These pictures, taken at the time, are now being reproduced by some of the leading magazines, in articles on official life in Washington and not in any sense fashion articles. Current paintings of official ladies of earlier decades, and photographs of those of later days show that they adopted even the most extreme styles.

In the early days of the civil war we find a style that, according to critics of a few years later, was not only an absurdity as to size and appearance, but was decidedly uncomfortable for the wearer, as well as unhygienic. In an editorial in the *Lady's Friend* of Philadelphia, for November, 1865, we find the following:

"We cannot think without a shudder of the style which immediately preceded that of hoops. The eight or ten skirts that even sensible women wore, have

Grecian Bend, 1884.

weighed down thousands of women, through successive stages of wasted effort, miserable uselessness and untold suffering, into premature graves. The weight and heat of this superfluous clothing would be intolerable if the wearers had nothing to do but endure it, whereas most of them had their full share of duties in addition."

The editor then refers, at some length, to two still earlier styles, one a huge pad of feathers on the back, and the other a pair of similar appendages on the arms, the padding being worn not only on social occasions but while the wearers were about their household duties.

The large number of heavy skirts was followed by the "hoop skirt," a device which, while retaining the earlier form, relieved the wearer of most of the weight and heat. The hoop skirt was made by sewing into an ordinary underskirt a few rounds of rattan about the size of a present-day lead pencil. One was at the bottom of the skirt and the others at intervals upwards.

But the extreme of skirt spreading was by the "crinoline," which sometimes measured a yard and a quarter in diameter near the floor. Imagine wearing such a dress in a close carriage or crowded horsecar. The crinoline, or skeleton, as it was sometimes called, consisted of a large number of small, flat steel hoops, gradually diminishing in the size of the circle from the hem upward, and supported by strong tapes attached to the waistband.

From the extra large crinoline there was a gradual decrease in the size for about fifteen years, the efforts of the dressmakers being directed more to new combinations of color, styles of trimming, etc. In 1831 women's dress had assumed a normal size and shape, but was much plaited, flounced, tucked, puffed and ruffled, with overskirts and other accessories galore.

But the most uncouth fashion ever adopted was the "Grecian bend," which had a deservedly short run about 1884. The wearer stooped forward, the dress clung closely in front and was accentuated by a huge "bustle" just below the waist-line, behind. To the credit of our American women this monstrosity was not generally adopted, and its reign was short.

But the change of style between the crinoline of 1865 and the attenuated skirts of 1909 shows the extremes into which fashion will lead its votaries. The 1909 dress, surmounted by any of the ultra styles of millinery, makes a picture that will be as interesting, when its day is passed, as are the pictures of the crinoline and Grecian bend to people of today.

Carriage Dress, Worn Over a Crinoline.

A Much-Plaited and Draped Dress and Overskirt. Front and Back View, 1831.

Attenuate Dress of 1909.

NATURE STUDIES

SQUIRRELS.

JOHN H. NOWLAN.

IN this department we have been told about many kinds of pets. Some of them have been of an unusual nature—yes, even strange. All things can be tamed, but some are much easier tamed than others. And even among those tamed with equal facility there is a wide range in the desirability as pets. The snake is not a difficult animal to pet—at least such has been my observation; but I have gained all my information about them at long range. It may be early training or it may be a natural antipathy, but just the same I prefer to study them at long range or make a post mortem examination.

If you wish an interesting pet, and one that at the same time is easily tamed, get a squirrel.

In my youthful days my first great disappointment was hushed by the promise of a young squirrel from a nest in a tree to be cut soon. But "there's many a slip," etc., and in my case the proverb held true. Others reached the tree first, secured the young ones, and again I was doomed to disappointment.

Early impressions are the most lasting, and for years I wished for and attempted to secure a squirrel for a pet. "All things come to him who waits," and incidentally watches all corners. Last spring we went out to make some posts and after cutting down a tree found that we had wrecked the home of a squirrel.

Three little squealing, struggling baby squirrels were found trying their best to hide in the ruins of their home. What was to be done with them? Not feeling sure that the mother would find and care for them, we decided to do so.

They were funny, furry little creatures, about the size of a small kitten, and seemed to be principally head, with large protruding eyes.

A bed was made for them in an old milk can; they were taken to the kitchen and given their first meal from human hands. How? By means of a spoon. It was no more trouble to teach them to drink than to teach a calf. In fact I have seen calves that were much more rebellious.

The next day a rubber nipple was secured and placed on a small bottle. To see them feed was truly amusing. They would fight and struggle for the first turn

at the bottle. One of them would take almost the entire nipple in her mouth, grasp the neck of the bottle in her paws, and thus bid defiance to her equally greedy, but less shrewd, brothers.

There is as much difference in the disposition of them as there is in people. Though they are handled just the same, one of them is much wilder than the others. When the cage is opened he objects to being handled and does not want even to be noticed.

It was not long until they were able to jump up in the can, knock the cover off and then how they would scamper around! How they seemed to enjoy racing around the room!

As they grew older they exemplified the expression "as nimble as a squirrel." Turn one loose in a room and it will run around till almost tired out, then it will come up as if to tempt you to catch it. Make the attempt and before you can realize how it is done the little fellow is across the room waiting for you to make another attempt. I have seen one jump up in the air, turn over as if to grasp a limb, then turn back and alight on its feet with a nimbleness exceeding anything I ever witnessed in any member of the feline race. Sometimes when sitting on the shoulder of some member of the family one of them will leap and try to catch on the pattern of the wall-paper. Failing in this it does not fall, but whirls and alights on its feet on its old perch.

Of course the children must give them names. The greedy little Miss was called Flossy, her smaller brother Fluffy, and the unsocial one Furry.

What do they eat? It would be easier to tell what they will not eat. Bread, nuts, acorns, in fact anything that a chicken will.

When they have more than they want for the present they bury it in the sand in the bottom of their cage.

They like to get out of the cage and run up and down the tree under which it stands, but when tired they are ready to come down and go in again.

HUMANE EDUCATION—A FIRST STEP.

"W. B.," in *Our Dumb Animals* for July, 1909, writes in very general terms of the need of humane education—of its beginning in the family. I should

like to detail a specific instance of such education with its very broad results.

Here in this family of mine are four small boys, little savages each of them, as full of life and curiosity as red squirrels, fuller, indeed, of curiosity and interest in every sort of living creature—as is every normal boy who has a chance to be. I have watched this interest narrowly for the supposed natural cruelty of the natural child, but have not found a trace. They do not differ from other children; they simply have this advantage over some, namely, that they themselves live as natural animals in a natural world, and the life of things, as it moves and behaves, is so entirely interesting that they never thought of killing or torturing for the sake of abnormal behavior that follows pain. With this interest to begin with (which, I believe, is natural to all children), their specific education in ways humane became simply the quickening and extending of the knowledge and curiosity they already had.

As they lived in the fields they naturally kept doing this for themselves; but something more, something larger, was necessary: their knowledge needed to be organized, related, their interest directed.

First, some of the modern animal stories were read to them; but it was too often the story rather than the animal that held their interest and besides most of the stories were either so goody-good, or so viciously untrue as to be morally harmful. Then Arabella Buckley's "Life and Her Children," and "Winners in Life's Race," were begun and the boys carried carefully through these accurate and delightful volumes with this result; they got a view of life from the amoeba to elephant, of the orders and families of animals, their habits, characteristics, relationships, and distribution, and the parts they have played in the making of the world.

Here was something more than a pretty-kitty story, or a super-fox story, or a sermon on how cruel it is to throw stones at anything in general. Here was genuine science, fascinatingly, simply told, that gave these children a knowledge of life as a whole, and an interest in life for its own sake—sound, true, wholesome, moral knowledge and interest.

After this it was inevitable that the small lives and the large lives about them—the caddis in the brook, the fox in the woods—should have for them equal value and equal interest, for a caddis fly in "Life and Her Children," was just as worth while as the elephant in "Winners in Life's Race."

With this sort of an introduction to life, a rusty tomato can full of leaf mold and a snail is just as good to watch as a cage full of polar bears. I have seen it over and over. All life has become interesting, and interesting as it lives and behaves naturally. There is no desire to kill, no desire to watch the abnormal behavior that follows pain.

There is nothing—neither sermon nor story—that will take the place of the simple truth about things—the whole scientific truth. It is amazing how little *chickenlicken* literature the child needs, and how much scientific truth he can take in and grow on.—*Dallas Love Sharp, in Our Dumb Animals.*

THE TAIL OF A SQUIRREL.

JET and Brownie are our two dogs. We have recently moved from the city to a suburban home, and both the dogs are as pleased as the children are with the large yard to run and play in. Jet is a valuable, large black-and-white setter and has been a member of the family for several years. Brownie is an adopted dog—a curly water-spaniel who was a lost dog, belonging nowhere, forlorn and half starved when she followed us home one evening a year or two ago. She has refused to leave us since that time, and has repaid our kindness by the most devoted affection.

She knew all there was to know about city streets and alleys, about where to find stray bones and how to dodge boys and policemen, but the country sights and sounds were all new to her. A few days after we had settled ourselves and our furniture in our new home, we found a dead squirrel in the yard. Knowing that one of the dogs must have killed it, we decided to prevent any more such performances by trying an old-fashioned remedy. Each dog was shown the dead squirrel, which was then tied around the neck of each in turn for a few hours. It did not take long to convince us which one was the culprit.

Jet seemed annoyed by the unusual necklace, but was not cast down in spirit by having to wear it, and was as friendly and dignified as usual; while Brownie hung her head and tail and took refuge under tables and chairs to escape the public eye, looking the picture of shame and woe. At bedtime the squirrel was taken from Brownie's neck and carefully placed near the back gate to be removed next day by the garbage collector. Before his arrival, however, the squirrel was missing. Every one was questioned, but no one knew what had become of it.

Later in the day Uncle John discovered a tuft of something sticking up out of a fresh mound of earth in the corner of the yard. It proved to be the squirrel's tail moving in the breeze like a plume over its grave. Then it was remembered that Brownie had come into the house late in the evening with a little pyramid of dirt at the end of her strong, sharp little nose. Brownie had buried the squirrel all but the tip of its tail!

She had evidently made up her mind that she had had enough trouble about the squirrel and did not intend to have it hung around her neck again, and had carefully put it underground where, she thought, it could bring her no more punishment or disgrace. She never touched another squirrel.—*Farm Journal.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

It is coming time to cast up our accounts for the year. Will the expenses—good deeds done—balance with the good received?

MAKING an excuse for an acknowledged mistake is the poorest sort of way of getting the mistake covered up; but a very good way to have it remembered by both parties.

MEET Jack Frost with a cheery, easy manner and he is a fairly companionable fellow. Meet him with a frown and a shrinking mien and he is most disagreeable. Same thing is true of folks of our own race.

SOME of the things we worry most about and strive hardest to secure are of the least value after we have won them. We cannot always know this beforehand, but it is a wise thing to know all we can and thus save our efforts for needful things.

ALL stock expressions are in the majority of cases carelessly and thoughtlessly used. "I haven't time" is no exception to this rule. The one who pleads this excuse generally has time,—all of us do, as our countless wasted moments can testify. Being plainly honest with ourselves and with others will make this expression well-nigh obsolete to our own lasting good and to the benefit of the world in general.

THE fact that our very busiest men can be appealed to most successfully for additional service but proves the law that one's capacity for service grows with the demands made upon it. "To him that hath, shall be given," said the Master, and no man has yet sounded the depth of that truth in his own experience. To excuse ourselves from service on the plea of time is to doubt the Master's word and block up our own way to the highest usefulness.

LIVING IN THE SUPERLATIVE DEGREE.

By the above term we do not mean living with every faculty of the mind and body at the highest tension. To be sure, that would be in one sense the superlative degree, but it would not be the one that would bring the greatest results and results are the things that count,—the things that one should keep in mind. By living in the superlative degree we mean living up to one's highest possibilities,—doing one's best every day. This would not call for haste or any abnormal strain, for every worker knows that as a rule he does his best work when under no strain and the best days' work generally leaves him in the best condition mentally and physically. The habit of doing one's work by fits and spurts is much harder on the worker than if he were to go at it with a steady persistence, using every faculty at just the place where it will accomplish the most at the least cost.

When one considers the matter a little he is pretty sure to conclude that we have so much work done of a low grade not because we have few geniuses and many of mediocre ability, but because workers are satisfied merely to be workers—not better workers nor the best workers but workers of the positive degree—moving along in a well-worn groove, doing as much as the average or just enough to keep one's place.—Did we say mediocre workers are satisfied merely to be workers? Satisfied is hardly the right word. Their actions would make it appear that they are satisfied with conditions, but in many cases this is not true. They may be satisfied with themselves, with the amount and kind of work they are doing, but they are not satisfied with the one who lives in the superlative degree, with what he is doing and with the results he is reaping. And they are not satisfied with their work. That is they are not happy in it, they do not enjoy it. They never know the keen joy of the worker who can write "more and better" after the record of today's work. They make up the large army of restless, discontented workers who are always kicking because "the other fellow has a snap."

Doing one's best is the sure and only way to grow and improve. It must therefore be the normal condition for man, since growth and improvement are the natural evidences of health. A glimpse into the lives of the world's greatest and best workers shows that their great accomplishments were the result of making the most of their opportunities, of making each day's record better than that of the preceding day. And these great workers will testify that living in the superlative degree not only makes one's life broad and full but that it is conducive to long life. The strenuous life, free from strain and worry, means the long life,—long in years and long in the amount of work accomplished.

NEED OF ECONOMY.

It is not strange in these prosperous times, when there is scarcely any limit to the things people have set down as "must haves" and at the same time scarcely a limit to the prices set on these "must haves," that men of foresight, men who know the artificiality of present-day conditions, should sound the alarm and endeavor to point out the way leading to safe and sound ground. James J. Hill, one of the leading railroad builders of modern times, is one of the men who sees disaster ahead if the present course of things is continued.

Recently Mr. Hill was at the White House and had a conference with the President. Later he expressed his views on the extravagance that is so generally prevalent and on the present high prices. He had no panacea to offer for the ill that he sees threatening the country but he thought that economy—the cutting down of useless expenditures—individual and governmental—would go further than anything else toward aiding in improvement of conditions. Mr. Hill bases his pessimistic view of the future on history—the records of the past. He says he finds that natural decline begins when the cost of living becomes a burden to the masses, while the immensely rich are in no wise affected.

Mr. Hill believes that the great minds of the country should turn their attention to this question rather than to the many dealing with laws unless these laws can aid in the solution of the problem. Our statesmen spend much time, he says, trying to devise laws for better and more honest living and yet neglect the one problem that directly touches the millions whose welfare constitutes the very existence of the nation.

There is ground, it is true, for Mr. Hill's position, and it should be given consideration, but while it is true that the present high prices affect only the poor, the extravagances of this class have increased in about the same proportion as the extravagances of the rich; and this extravagance has something to do in the making of the present high prices. This was not the case with the nations of the past whose decline began "when the cost of living became a burden to the masses while the immensely rich were in no wise affected."

The conditions that allow the rich to become richer while the poor are growing poorer need reforming, and that soon, but at the same time the majority of us need to lay aside some of our "needs" that are really extravagances. We can do much toward helping matters in this way while the country's leaders are adjusting the main machinery so that there is an even-
ing up—a fair trade between the extremes in the financial world.

DUTY.

It is sometimes said that the word duty is a stern word. Very few boys and girls like to be told that something is their duty, but whether they like it or not duty is always near at hand, and if we take time to look it in the face and see just what it is, it is not such a stern thing after all. It lies at the basis of much of the best things in the world. Here are some good words about duty and its meaning for life:

"The path of duty is the way to glory."

"Do your duty and leave the rest to God."

"The windows of heaven open directly over every post of duty."

"The real duty is neglected when we step over one duty to perform another."

"Simple loyalty to today's duty is the only preparation for tomorrow's greater one."

"When God gives a duty, he is ready, also to give the grace needed for the doing of it."

"The boy who succeeds is not the boy who insists upon his rights, but the boy who attends to his duties."

"Only the combined sweetness of all the flowers in the world can compare with that which comes from duty performed, for

"The highest duties oft are found
Lying upon the lowest ground;
In hidden and unnoticed ways;
In household works, on common days,
Whate'er is done for God alone,
Thy God acceptable will own."

—Selected

ONCE IN AWHILE.

Once in awhile the sun shines out,
And the arching skies are a perfect blue;
Once in awhile mid clouds of doubt
Hope's brightest stars come peeking through.
Our paths lead down by the meadows fair,
Where the sweetest blossoms nod and smile,
And we lay aside our cross of care
Once in awhile.

Once in awhile within our own
We clasp the hand of a steadfast friend;
Once in awhile we hear a tone
Of love with the heart's own voice to blend;
And the dearest of all our dreams come true,
And on life's way is a golden mile;
Each thirsting flower is kissed with dew
Once in awhile.

Once in awhile in the desert sand
We find a spot of the fairest green;
Once in awhile from where we stand
The hills of Paradise are seen;
And a perfect joy in our hearts we hold,
A joy that the world cannot defile;
We trade earth's dress for the purest gold
Once in awhile.

—Nixon Waterman.

THE HOME WORLD

CONCERNING THE PURITY CONGRESS AT BURLINGTON, IOWA

BY CATHERINE BEERY VANDYKE

THE present widespread agitation on the matter of cleaning up the personal, social and political filth that exists in this our "land of the free (?) and home of the brave" (?), is not *more* widespread than the need itself. For the satisfactory readjustment—or perhaps I might better say—the *adjustment* of a reasonable degree of decency in our political, social, educational and—I dare say—our *religious* lives it will require all the best influence of the Prohibition party, the W. C. T. U.'s and similar organizations and the combined efforts of individual humanitarians and Christians.

When we stretch our eyes wide open to the real facts of the liquor trade, the traffic in white slaves, the disease of gambling, the ubiquity of street-reared children, the paralysis of parental indifference, and the cancerous processes of some of the present-day high schools and universities, we will wonder how we ever had a moment's peace, when not engaged in the conflict against this fearful state.

It is too often the case that we do not care to bestir ourselves in behalf of humanity until some of our own loved ones are found in the vortex of destruction. Very often it is too late then to rescue the particular loved one but, thank God, not too late to prevent some other person's loved ones from going down to ruin. Ignorance does not excuse us from the penalty of a broken law—no more in the physical than in the civil—so it is not safe to console ourselves with the idea that we are "free from the blood of all men" because we *didn't know of their peril*. The weak is ever dependent upon the strong and it is the glory and to the honor of the strong to rise to the emergency.

Among the interesting subjects discussed at the Congress were addresses taking up various phases of the White Slave Traffic and the Social Evil, Purity Among Children and Youths, Immigration Restriction, War

Against Segregation, Improved Marriage Laws, The Sunday School and Purity and the Primacy of Prayer and Preaching in Purity. I wish only to give enough of the subjects, at this time, to cause parents and educators some reflection upon a vital issue which has been too long shunned.

The address on the white slave trade which helped me most was that given by Clifford G. Roe, Assistant State-District Attorney of Chicago. Following are some of his statements: "The white slave traffic is nation wide. It reaches into homes throughout our country and is undermining the very foundation of our social system. Secrecy has been the success of the white-slave-traders. In their effort to conceal their operations they have been unconsciously aided by fathers and mothers, since the latter have been unwilling to talk to their daughters about the details of a subject so revolting. Why do I ask parents to bring into the family circle facts which are so black and ugly? It is because fathers and mothers are oftentimes morally responsible for the downfall of their daughters by not taking them into their confidence at the fireside. Neglect by the parents in the raising of their daughters is a factor in the making of white slaves. The highest aim of parents should be the proper rearing of their children."

In the making of white slaves there are three stages: "The procurer must become acquainted with the girls and win their confidence. Then, they must get them into immoral houses. Finally, the girls must be kept in those houses. The baits are love, vanity and ambition." Here he gave an account of a sixteen-year-old girl, telling her name, and a girl friend of the same age who were lured into a house of ill fame through love (?) last July in Chicago.

He said further: "It may seem strange that girls can be led astray so easily, that they will fall in love

at first sight and go so unhesitatingly and confidently with almost utter strangers, but truth is stranger than fiction. Wayward girls who flirt merely for the fun of flirting, who frequent the public dance hall and roam about the streets at night, are the ones who are most easily entrapped by the vanity method. The procurers make no distinction between the innocent and the wayward girl.

"After the girls are in the disreputable places their stories are all about the same. Their street clothes are taken away from them and flimsy parlor dresses are given them to wear. They are not allowed to communicate with their family and friends in the outside world. They are placed in debt and this system of indebtedness has been the backbone of the white slave traffic."

The matter of instructing children and youths concerning sex and its meaning was largely in the hands of Mrs. Della Thompson Lutes of Cooperstown, N. Y., editor of *American Motherhood*, and Dr. Winfield Scott Hall of the N. W. Medical School, Chicago. A forenoon was devoted to the former while the latter at different times gave talks to boys under eighteen, to men and to public school teachers and also to the public at large.

Mrs. Lutes was assisted by Miss Phelps of Michigan from a teacher's standpoint, by Evangelist Florence Ethel Smith from a minister's standpoint and by Dr. Josephine Young from a physician's standpoint, while Mrs. Lutes herself gave a very practical paper upon the importance of being physically prepared for marriage and its consequent responsibilities and duties.

Miss Phelps told how the process of animal reproduction was explained to a certain class of children in the public school by a wise and careful teacher to the benefit of all, using a pair of rabbits for the illustration. Her argument was that if the parents neglect to teach their children a pure knowledge of sex, then the duty devolves upon the public schoolteacher. She demanded that all public schoolteachers should be obliged, before being permitted to teach, to take a course in sexual hygiene.

Miss Smith told of a case of a little girl whose mother had not told her the truth about girls and boys and babies and who, when she did find it out, was turned against her mother and confidence with her wholly destroyed.

Dr. Josephine Young showed how lack of sex knowledge brought about shocking conditions in children. She spoke of the need of inspection of closets in school buildings and other places where children gather. If anything improper was discovered it should be investigated. Contagious venereal diseases were oftentimes contracted in these closets and their supervision could not be too strict. If lewd or obscene drawings were found on the walls they should be traced down to their source,

not for punishment but for investigation and help, if possible. The person would usually be found a youthful pervert and his perversion might sometimes be traced to home influences or companionship. She told how these lies and evasions of the parents allowed their children to grow up with false conceptions which led them wrong. Young girls could not understand the sensations they had when they touched the hand of a person of the opposite sex, but thought it was love, and so fell victims to the unscrupulous man or boy whom they believed they loved. She said lack of true knowledge of sex taught young men and boys to treat girls as playthings, whom they could treat as they pleased and the girls, knowing no better, allowed shocking liberties. The child should be trained in the control of its emotions, in the care of its body, mind and soul, in order to grow up pure and clean.

The Congress not only abounded in splendid, helpful addresses by men and women well acquainted with their subjects, but practical suggestions were made for reform and many good resolutions were proposed and adopted for more telling work in the future. I quote some suggestive remedies to suppress the social vice:

"Publicity is the important factor in extending the work."

"Publicity and pressure."

"Placing lobbyists at the State Capitals and at Washington during Congress and the meeting of assemblies."

"The greatest need of a boy is a friend."

"Immigration restriction: To increase the steamship head tax; to debar undesirable aliens by the illiteracy test; a money requirement and a character certificate; to require young girls to be accompanied by or to come to a near relative; and to fine the steamships \$300 for bringing an undesirable alien when the undesirability could have been ascertained before embarkation."

"Police experience proves that segregation does not segregate but rather serves as a nucleus from which the rottenness radiates in every direction." "The system of segregation is as indefensible as it is pernicious." "Eliminate the wrong and put in the right."

FATHER.

J. I. MILLER.

WE have given the above subject much thought, and have seen some of the things we shall mention farther on in this article.

There are thousands of people of both sexes and from youth to old age that do not have the proper respect for that endearing name, "Papa" or "Father." Thousands of men could relate how at their earliest recollection they enjoyed a play or "romp" with Papa. When Papa would come home from town how

they would run out to meet him to see if he had any candy for them, or when he came in from the field how Johnny would run out to meet him and tell him Jim found a hen's nest with a whole lot of eggs, or George caught a big fish down in the branch, or Katy found the old cat with a lot of kittens. And there was no one like Papa. But after awhile Johnny and Katy get BIG and assume the names of John and Kate. Then Papa begins to grow older and in the estimation of the children he does not know as much as he used to and does not talk like he used to, and is getting too particular, and when they are in their teens "Papa" and "Mama" are dropped out and it is the "old man" and the "old woman." Shame on the young people who will use such irreverent names for their parents!

We remember of a family that consisted of father, mother, two girls, a large boy and two small ones, grandpa and grandma. Grandpa had a good horse and buggy. Grandpa was old and feeble; he took sick and while he was lingering, waiting for the Master to call him home, a neighbor met the big boy and said: "Your grandpa is very sick, is he not? Do you think he will get well?" The grandson replied: "I don't know if he will get well or not, but we can do without him; I'm all right for the horse and buggy any way." Grandpa died; the horse and buggy never did the grandson much good. At this time the grandson was about twenty-one years old, a stout, hearty young man and had the prospects of a long life, but a year or two later fever laid hold of him and in a few days, sad to contemplate, he was called to the great beyond.

Then we know of a family where the grandchildren used to like to visit the grandparents when they were little tots. But later they grew up to be big and the grandparents came to live with their children, but you know they were old and made so many mistakes and when the young folks had fashionable company the "old folks" were told they had better wait and eat at the second table. Such irreverence!

While our children are all grown up and married except one, we had never had any personal experience along that line, thank God. But in years past we often wondered if our turn would ever come to be treated that way by our children. We read a story in our boyhood days which goes as follows:

"Once there was a man whose father was an inmate of his home, and father or 'Grandpa,' as he was called, was blind. One day the man took his ax and went to the woods. His little son went with him. The man cut down a small tree and began to work on it. The son asked him what he was making. The man said, 'I am going to make a trough for Grandpa to eat out of; he is blind and breaks so many dishes, I will put a stop to it!' The son said, 'Well, papa, I'm going to watch you make it and when you get old and blind I will make one for you.' The trough was never

finished. The man went home; Grandpa's mistakes were not so many in the future and were overlooked."

We once had a family for neighbors for eight or nine years and we can not remember that we ever heard the grown boys call their father anything but the "old man."

We appeal to every boy and girl, large and small, never to allow the word "old man" or "old woman" to come from your lips relative to your parents or anyone else. It is a mean expression. Address all people with respect as you wish to be addressed.

BUTCHERING.

LET the meat get thoroughly cold through, but never let it freeze before salting, or it will not keep. Trim hams and shoulders neatly and add the trimmings to the sausage and scrapple meat. Lay them skin side down on a board and rub into them the following mixture:

For every 100 pounds of meat take four pounds of best salt, four ounces of brown sugar and two ounces of saltpeter. If you have more or less than 100 pounds, graduate these in proportion. Rub this into and all over the hams till they will take no more, and push some into the hock around the bone. Let them lie for a week, then rub in the rest of the mixture. Let them lie for sixteen days altogether, then hang in the smokehouse by a string through the hock, and smoke for two or three days with smoke from hickory or apple chips, smothered with sawdust. They will keep without smoking, and by some are liked as well unsmoked.

The lighter, thinner hogs, such as when dressed weigh about 150 pounds, are best for bacon. The hogs should not be swill fed, but be given corn, barley and other grains; and if they can run in the woods where there are beechnuts and acorns to be picked up, all the better. Cut the sides into strips, and if you cure them in pickle put them for six weeks into brine made in this proportion:

For 100 pounds use six pounds each of salt and brown sugar, and four ounces of saltpeter, with just water enough to cover the meat when closely packed in a clean barrel. Sprinkle a thin layer of salt on the bottom so that the meat will not touch the wood. Put the skin side down and be sure that the whole contents are covered with brine and kept under by a weight. At the end of six weeks take up the meat and smoke to a tan color with hardwood chips of hickory or apple. Sew up in muslin bags and whitewash on outside. Store in a dry, cool place.

To dry cure it, rub with salt for three or four days, raising the pieces on slats for drainage. Mix equal parts of salt and sugar, with an ounce of saltpeter to each pound of salt. Moisten this with New Orleans molasses till it is sticky. Rub this on every other day

for two weeks, letting it drain, and turning it every time; then smoke and put away as above. Hams can be cured in the same way. The salt that drains off will be relished by the stock.

To pickle pork: For fifty pounds of meat allow two and a half pounds of brown sugar, two ounces of saltpeter, and salt to make a brine with about nine gallons of water (depending on the size of the vessel you pack it in). Mix the sugar and saltpeter with the water, and add salt until it will float an egg. Pack the pork down in a tub, but leaving space for the brine to get around it; pour it over and skim off all that rises. If the pickle does not quite cover, make more of salt and water. Put a weight on top and examine carefully each day, and skim. It may be necessary to make a new pickle in about two months. Pork should be pickled twenty-four hours after killing.

Chop sausage meat fine and use plenty of firm fat with it. For fifty pounds of meat mix a pint of salt, a third of a cupful of black pepper, two teaspoonfuls of cayenne pepper, and a closed handful of sage. Work this thoroughly through the meat. Pack the sausage for winter use in clean, sweet, stone crocks and run two inches of hot lard over it. That to be kept for next summer is best canned. Make into small cakes, cook about two-thirds enough for the table, or until the water is all out, then pack in jars, fill with boiling lard, and seal. Keep in a cool place. When cooked next summer it will be more delicate if you drain off every drop of fat after it is fried, then pour a little cream in the pan, boil the sausage a moment in it, and serve.—*Ruth Brown in Farm Journal.*

MAKING THE "DRUM-STICK" TENDER.

EVERY housewife should know how to draw the tendons, or tough sinews from a fowl. If the fowl is bought ready dressed in the market, the butcher will draw the tendons, if asked to do so, but for the home-grown and dressed fowl, the housewife or husband should know how to remove them. The legs should be left on the fowl after dressing, when it should be turned on its breast, and the back of each leg, one at a time, held in the left hand. With a sharp knife in the right hand cut very carefully just below the knee joint, through the skin, but not deeper; inside will be found the group of tendons, eight of them in each leg, lying snug in a groove; these are attached to the foot, but run away up through the dark meat into the leg, well into the upper joint. With a strong wire skewer lift each tendon separately, hold the fowl firmly and pull steadily. If the fowl is a young one and tender, the tendons will come out easily, requiring but a slight effort. If the bird is an old one, the job will require more muscle, but it is the old bird that needs the removal of the tendons. If the fowl is a turkey, a long, strong pull is required; cut the skin in the leg half way

between the knee-joint and the foot, and the group of white shining tendons will be readily seen. Slip a strong skewer, or the point of the carving-set sharpener, under the bunch of tendons, lift them carefully, then twist around two or three times to get a good hold, give a strong, steady pull, and they will come out. Everyone of the eight must be removed, so, if one is missing among those drawn, hunt it up and remove it.—*The Commoner.*

The Children's Corner

THE STORK'S LESSON.

MATTIE had pouted because her mama had corrected her at the supper table for not saying, "Please" when she asked for things. She was sitting in a chair looking at her picture book. Finally she looked up at her mother, her face showing she had gotten over her temper, and said: "Did you ever see a stork, mama?"

"No, I never did, but I've read about them," replied the mother. "Why did you ask?"

"Here's a picture of one, and I was just wondering about how storks live. I wish you'd tell me about them. This one has such long legs and neck and bill."

"Well," began her mother, "we don't have storks in this country. They live in Africa, Holland and Germany, and make their homes near the ponds and rivers, for they like frogs and fish. Their legs are long so they can wade in the water to catch them. They snatch them out of the water with their long bills and soon eat them up. They don't sing or make any noise except when snapping their bills. They are kind and gentle birds, and in some towns they walk along the streets and are petted by the people. They build their nests of sticks and reeds on the tops of the houses or in church steeples, where they hatch their young."

"Is that all you know about them?" questioned Mattie, when her mother paused. "I wish you'd tell me something more."

"Oh, I had almost forgotten," continued the mother. "The stork has a lesson for little folks."

"Tell me what it is," pleaded Mattie before her mother could proceed.

"Well, a stork that is tame will often get very hungry, like little girls do, you know, and when some one feeds him he will crouch down and make a very low bow, as much as to say, 'I thank you very much for giving me some nice food.' I hope my little girl will always show her appreciation of those who provide her food by thanking them for it."

"I'll try after this to be as good as the stork," said Mattie, and her mother couldn't help but give her a great big hug.—*Selected.*

THE QUIET HOUR

THE BALLAD OF THE SAINT.

The Little Cherubs whispered,
 "What strange, new soul is this
 Who cometh with a robe besmirched
 Unto the Place of Bliss?"
 Then spake the Eldest Angel,
 "The robe he wears is fair—
 The groping fingers of the poor
 Have held and blessed him there."

The Little Cherubs whispered,
 "Who comes to be our guest
 With dust about his garment's hem
 And stains upon his breast?"
 Then spake the Eldest Angel,
 "Most lovely is the stain—
 The tears of those he comforted,
 Who may not weep again."

The Little Cherubs whispered,
 "What strange, new soul is he
 Who cometh with a burden here
 And bears it tenderly?"
 Then spake the Eldest Angel,
 "He bears his life's award—
 The burden of men's broken hearts
 To place before the Lord."

"The dust upon his garment's hem—
 My lips shall bow to it;
 The stains upon the breast of him
 Are gems thrice exquisite.
 Oh, little foolish Cherubs,
 What truth is this ye miss?—
 There comes no saint to Paradise
 Who does not come like this."

—Theodosia Garrison, in the November Everybody's.

THE TRUE LIGHT.

RICHARD BRAUNSTEIN.

IN the Holy Scriptures we learn that *God is light*. (1 John 1: 5.) The phenomenon of light has been an active source of thought to men all through history, and it is not strange that it has had influence upon religious ideas. The most holy verse in Vedas is addressed to the sun. "No part of the Egyptian religion," says Rawlinson, "was so much developed and so multiplex as their sun worship." The Assyrians worshipped Shamas the Lord of fire. The religion of ancient Persia was fire worship. The Incas of Peru worshipped the rising sun. The mythologies of India, Greece, Rome and Scandinavia are all probably solar.

Such is the effect of light upon the thought of early history.

Today we do not build altars to it, but none the less light is a source of wonder to us, which is all the greater because it is intelligent. The most purely scientific book about it is as inspiring as the most imaginative poetry. We are still more impressed, when we think of it in our daily life. It is the condition of all vital existence, of knowledge, of beauty, of art. No wonder we love to bask in it, no wonder science is thrilled by it, no wonder the ancients worshipped it, no wonder John, trying to tell men about God said: "God is light."

What did he mean? The word light is so large, so full, that we might perhaps think that John did not mean any one thing; that he just spoke the one syllable which meant the most possible, and said God *is that*. But we may analyze his thought, and in two ways, according as we take his words literally or figuratively.

But you say, what literal meaning can they have? Suppose that just as we have our bodies, so God should have some form of manifestation, a spiritual substance of some kind back of the attributes of personality. Light is the word which comes nearest of any word we have to describing this substance of God's being. We are dealing with a great mystery; nevertheless, with Haupt we can admit that it is a great thing to know that in God there is an essential nature which is to be called light, though we do not know how we are to conceive of it.

But John's words are no doubt capable also of being understood as a metaphor. In that case they indicate that the moral nature of God is light-like. That involves first, the idea of holiness. The color for sin is black—its works are works of darkness. Light gives us the thought of purity. A second idea is that God reveals himself, as light reveals itself. You do not have to light a candle to find the sun. You need not search to find God. He is shining in upon our souls all the time. A third idea is that God imparts his character to men, as light makes whatever it shines upon also light. "Be ye holy, for I the Lord your God am holy," may be translated in the future sense. Humanity is a poor, insignificant thing morally; but let God come into it with the beauty of his Holiness, and he can make it outshine the angels of light.

RELIGION.

IRA P. DEAN.

"RELIGION is all right in its place, but its place is not to interfere with your work," said a father to his son one day. "If religion interferes with your work get a new religion. It don't pay to be always so religious that it makes you conspicuous among your fellow-workmen; people hire you to please them and not your religion. There are just as good Christians as you working and they attend to their own business and don't let their religion interfere with them. Besides, your religion won't keep your family. People go crazy over religion."

This conversation I have heard between father and son about a dozen or more times and it is very poisonous advice to give to a young man. In fact there is no logic in it. Religion never interferes with your work; it's your work that interferes with your religion. Don't get a new religion, get a new job. If meat don't agree with your stomach, get a new stomach. That is as logical as getting a new religion because your work interferes with the religion you embrace. If you cannot exercise your religion at your work something is wrong with you or your religion. If you can't exercise religion at work, where shall you exercise it? Religion is not like a suit of clothes, i. e., the religion of Jesus Christ, that it can be put on, taken off or covered with overalls. True religion shines brightest through overalls.

True religion is as a well SPRINGING up unto everlasting life. If religion is as a spring there is not much that will keep it from making itself known; a religion that has to be pumped to see is no religion. A Christian can work for a man and attend to his (heavenly) Father's business at the same time. The trouble is, too many good Christian professors (not possessors) attend to their own business and neglect their Father's business.

People never go crazy with religion, that is true religion. If they do they don't have their religion at the right place. People go crazy in the head but religion is in the heart and you never hear of people getting crazy in the heart. You can't have the religion of Jesus Christ and go crazy. Read Luke 8:26-40. Right there you will see that the religion of Jesus Christ made a crazy man safe and sane. Religion certainly can't work both ways, for Christ said a house divided against itself will fall. Jesus didn't keep his religion to himself and if you have his religion you can't keep it to yourself either. If you do, you won't have it long. Some people are praying for more religion and are not using what they have. The idea! God knows when you need more religion. Did you ever hear of a really active Christian running out of religion? I never did. Some people say they can't see much in religion. That's because they are not in it.

Get in and look out and you will see more. Some say they don't understand religion. That's all right, don't worry about that. God understands it. Oh! if the heart is right, all is right. Yes, but the heart can't be right without the religion of Jesus Christ. Ask the Lord about it.

OUR GREAT WEAPON, THE BIBLE.

THE Bible is our greatest weapon, and if we ask the native, "Is it not God's book?" the reply is, "Yes, that must be God's Word, for *no white man ever knew so much about us.*"

Not only the blacks in Africa need conversion; there are the European immigrants. I was at a big Dutch trading house at Benguella, where thirty or forty Europeans, British, Dutch and German, had congregated for a commercial conference. A Dutchman at the head of the table greeted me. I could see that they thought, "Here's the Missionary, let us have a little amusing discussion." He said, "The Bible is not believed in now. I know all about it."—His father was a worthy minister in the Dutch Reformed Church.

I replied, "I shall be glad to prove to all of you that the Bible is true. Allow me to fetch mine." I did so, sat down at the table, and asked the man to mention what portion was untrue. "Oh," said he, "it is so long since I left home that I don't remember. You read, and I'll tell you." I began to read the first chapter of Romans, solemnly.

By the time I had finished, there were only six men left, and the man at the head of the table drew his slouched hat from under his chair, and muttering that there was a nigger calling him, stole out. There was no nigger. But that was the last of the discussion that was to prove the Bible untrue.—*F. Stanley Arnot.*

WHEN GOD'S WILL HURTS.

MANY people think of God's will as something hard, to be endured, when really it is the very best thing that we could ask. Several years ago a woman, with her little baby, was riding in a stage coach in Western Montana. The weather was bitter cold, and, in spite of all the driver could do to protect her, he saw that the mother was becoming unconscious from the cold. He stopped the coach, took the baby, and wrapping it warmly, put it under the seat, then seized the mother by the arm, and dragging her out upon the ground, drove away, leaving her in the road. As she saw him drive away, she ran after him, crying piteously for her baby. When he felt sure that she was warm, he allowed her to overtake the coach and resume her place by her baby. Can we not imagine her gratitude when she realized that he had saved her life? He had done as God sometimes does, to shake us out of soul-lethargy and moral sleep which would end in death.—*Youth's Companion.*

ECHOES FROM EVERYWHERE

The annual report of the secretary of the board of agriculture, just issued, shows that Kansas farm products for 1909 were worth \$532,685,245, an increase of \$57,440,414 over 1908.

It is claimed by officials of the American Telegraph and Telephone company that they have a machine which will do away with messenger boys. By use of the device any subscriber can write a telegraph message and it will be transmitted to the main office.

Rev. Wilbur F. Crafts, who is advocating the establishment of a total abstinence association in the army and navy, has announced the receipt of a letter from Gen. Frederick D. Grant in which the latter pledges himself to aid in establishing the organization in the army.

Providing for future labor problems, the government of Japan has announced a bill for a new factory law. The bill prohibits the employment of children under the age of 12 years and prohibits women of any age and boys under 16 years of age from working at night or for more than 12 hours.

The National Grange, in session at Des Moines, unanimously passed a resolution in praise of Dr. Wiley of the department of agriculture for his condemnation of benzoate of soda as a food preservative. The grange also went on record as strongly opposed to the ship-subsidy policy.

Nicaragua is to be called upon peremptorily to pay at once \$100,000 for the execution of Cannon and Grace, the American citizens put to death by order of that government. Secretary Knox has notified President Zelaya that he will brook no delay. President Taft, it is understood, has fully sanctioned the action taken by his secretary of state.

President Taft has indorsed San Francisco's plans for an international exposition to be held in joint celebration of the completion of the Panama canal and the anniversary of Balboa's discovery of the Pacific ocean. The promoters will ask for a donation of \$1,000,000 from the government.

Orders have been issued by Dr. C. Ward Crampton, director of physical training in New York schools, that hereafter the temperature in the rooms shall be maintained at 68 instead of 70 degrees. He argues that the lower the temperature the purer the air. In England the temperature is kept at 60 degrees.

Despite the governor's veto of the county option law, the mayors and county officials of Utah, have taken action in accord with public demand, closing the saloons by local decrees in Morgan County, Watsatch County, Utah County, Sevier County, Juab County, and the entire southern part of the State.

The United States Geological Survey reports that in 1908 California produced \$18,761,559 in gold, 1,647,278 ounces of silver valued at \$873,057, and 706 ounces of refined platinum valued at \$13,414. This platinum was all produced at placer mines in Butte, Humboldt, Siskiyou, Trinity, Calaveras, Sacramento, and Del Norte Counties, three-fourths of it having been mined in Butte County.

Dispatches from Teneriffe, Canary Islands, say the flow of lava from Mt. La Solaras is so slow that the people living in the vicinity are escaping in safety. Within a week the lava, if it continues its present flow, will have engulfed the town of Santiago, which is now depopulated. The gravest problem that confronts the authorities is the condition of the thousands of homeless people.

The family of Bjornstjerne Bjornson, the Norwegian poet, dramatist and novelist, have gathered at his bedside in the Hotel Wagram, Paris, prepared for his death, and no doubt before this reaches our readers the noted writer will have passed away. Bjornson is paralyzed from the waist down as a result of arterial sclerosis due to old age. The doctors were forced to resort to artificial respiration.

A report just made by the Volkswohlfahrt bureau or public weal society shows that in 190 German towns nearly 40,000 children are sent to school without any breakfast; many are also sent to bed supperless, and nearly 100,000 children have food provided them by the charity committees. Poverty, lack of employment, the ignorance of the mothers about cooking, the German reliance on beer, etc., are the causes given for this cruel condition of things.

Herr Bernhard Dernburg, imperial secretary for the colonies, has just returned to Germany from a trip to the United States to study the cotton-raising industry. Germany has been introducing cotton culture in her African colonies and is now producing 10 per cent of all the cotton she uses. Herr Dernburg visited Tuskegee and other schools to observe the most advanced methods of negro education. In Africa the chief problem is the development of capable labor for making the crop.

Dr. James K. Loring of New Orleans, who has had about 40 years of active, medical practice in the South, says: "The hookworm may be a reality, but in many cases I fear it is only a polite term for chronic and constitutional laziness. In the South, where I was born and reared, there has ever been a shiftless, inefficient class, which is at eternal enmity with labor. They despise work, and will toil only to get a bare subsistence. The hookworm is a grand theory, and will do as well as anything else to get Mr. Rockefeller to donate a part of his surplus, but, in my opinion, nine of ten alleged hookworm victims might be cured quickly by the vigorous application of a rawhide whip."

In consequence of the indictment of Thomas C. Giddings on a charge of defrauding the government by underweighing an importation of figs, the opinion prevails here that Uncle Sam intends to investigate other than sugar frauds. Giddings was a federal weigher and he reported a shipment as weighing 30,000 pounds instead of 40,600, according to the indictment. Collector Loeb had discharged ten more assistant weighers, making 83 in all who have been ousted since he began the custom house house-cleaning.

According to Pittsburg Standard Oil men and lawyers, the decision of the court dissolving the Standard Oil Company, even if upheld by the United States supreme court, will have little effect. The plan is to select the most popular subsidiary companies—the Atlantic Refining Company or the National Transit Company—and take immediate charge of same. The principal stockholders of the Standard are stockholders in the subsidiary companies. It is said the only change made will be in bookkeeping.

Extent of the Cherry, Ill., mine horror shown in figures: Men in mine when fire started, Nov. 13, 527; rescuers burned in cage, 10; dead bodies recovered, 101; bodies in sight in third vein, 68; total known dead, 179; escaped and rescued, Nov. 13, 124; rescued alive, Nov. 20, 20; total escaped, 144; total accounted for, 323; unaccounted for 204; estimated total death list, 393. These figures were taken from a report dated Nov. 24.

Working on the theory that earthquakes are preceded by an electro-magnetic disturbance, an Italian scientist has devised an instrument which gives warning that an earthquake is about to occur a few minutes before the disturbance is felt. With this instrument the inventor, Padre Maccioni, received warning of two earthquake shocks that occurred about ten miles from his laboratory four minutes before the earth waves affected the seismograph. The instrument is connected to a clock, and is so arranged as to record the time elapsing between the arrival of the electro-magnetic wave and the seismic waves.

In Oregon where they are building a railroad south from Bend the engineers have reached the lava fields which lie in that State, and they have decided to use the lava for ballasting the road. It is held that it will make an excellent ballast and will be an economical one, as nature seems to have prepared it for the purpose. The experts say that all there is to do is to have a steam shovel, scoop up the half disintegrated rock and dump it into the cars which will carry it to the point where it is to be used. If it should prove to be a success, it is claimed that this will be the first time any practical use has been found for lava.

American cities are ridding themselves of railway grade crossings. There are general laws against them in only 10 States. Massachusetts has required their abolition within 15 years, the road paying 61 per cent, the State 26 per cent, and the locality 13 per cent. New York found in 1906 it had 6,793 unprotected crossings and 1,904 with gates, or 8,733 in all. These are being removed by the State paying 25 per cent, the city 25 per cent, and the railroad 50 per cent. In New York and Brooklyn the city can contract with a railroad on the half and half basis. In Providence, R. I., grade crossings were eliminated by the road paying two-thirds and the city one-third. Philadelphia now has more grade crossings than Greater New York.

Senator Borah, of Idaho, who has been giving some attention to irrigation matters, coming from a State that needs a lot of irrigation, has said that \$30,000,000 will be wanted from the general government for irrigation work. Congress will be asked to issue bonds or certificates of indebtedness to that amount for the purpose of carrying on irrigation projects now partially completed and for which there will not be sufficient funds. It is intended that this money shall be repaid from the irrigation funds when the government is reimbursed by the sale of lands and the payment for them by the settlers. When this proposition comes up in Congress there will be quite a lively discussion of the whole irrigation subject, and probably an effort will be made to prevent the beginning of any new projects until the completion and payment for those already started is assured.

A 19-year-old American girl, Olga Steeb, of Los Angeles, Cal., is hailed by Berlin musical critics as one of the world's greatest pianists. Charles K. Keefer, a professor at one of Berlin's leading conservatories, who claims the credit for discovering the young American artist, says "no living pianist surpasses her; I believe none equals her." Keefer caused Miss Steeb to be heard by the severest critics of Europe and he says her playing amazed them. His verdict as to her proficiency is indorsed by the leading Berlin critics. The new pianist is an American girl of German extraction. She is small of stature and childish in appearance. She astonished Berlin by her repertoire, playing all of Bach's 250 compositions from memory as well as about 400 other classical and modern compositions. Her American training was received in Los Angeles, where she studied with Phil Becker. She lives at No. 1102 Mott Street, Los Angeles.

Last year a small lot of shelled corn of a kind new to this country was sent to the Department of Agriculture from Shanghai. It proved to have qualities that may make it valuable in breeding a corn adapted to the hot and dry conditions of the Southwest. The plants raised in the test averaged less than six feet in height, with an average of twelve green leaves at the time of tasseling. The ears averaged 5½ inches in length and 4¼ inches in greatest circumference, with sixteen to eighteen rows of small grains. On the upper part of the plant the leaves are all on one side of the stalk, instead of being arranged in two rows on opposite sides. Besides this, the upper leaves stand erect instead of drooping, and the tips of the leaves are therefore above the top of the tassel. The silks of the ear are produced at the point where the leaf blade is joined to the leaf sheath.

The deliberate purpose of postponing the passage of a postal savings bank law is ascribed to the recommendation of the monetary commission that Congress do nothing in that direction until the report of the commission is received. While the friends of postal savings banks are promised by the commission that the subject so dear to them will be considered, they are unable to obtain any assurances that it will be made a part of the new monetary system which the commission will propose. They assert that the commission is prepared to make a report at the coming session of Congress, but will not do so to keep the financial and currency issues out of the next congressional campaign. It is charged that Senator Aldrich and his associates have succeeded in setting in motion influences which will result in all probability in preventing the passage of a postal savings bank bill at the coming session.

Among the Magazines

IS JUDGE LINDSEY CRAZY?

The criminal law is founded on vengeance. It treats all criminals as born criminals, incorrigible and unforgivable. It is designed to save property, not to save men; and it does neither: it makes more criminals than it crushes. I believe that the methods of our Juvenile Court could be applied to half the criminal cases on our calendars. The majority of our criminals are not born but made—and ill-made. They can be remade as easily as the River Front gang was remade, if we use the methods of Christianity on them.

Does this read as if I were "crazy"? Do not think so. It is a conclusion based upon years of thoughtful experience. I have obtained a law in Colorado—the first of its kind in the history of jurisprudence, if that be anything against it—by which an adult accused of crime can be tried as our children are tried and aided and corrected by the State, as *parens patriæ*, just as our children are aided and corrected. And I am willing to stake my faith on it that if our courts and prisons ever learn how to work under such a law, you will see not only children but grown men and women going from the court rooms with their commitment papers in their hands and knocking on the gates of the prisons to be admitted. Crazy? When I first told one of our deputy sheriffs that in future I should send boys to Golden without him, he said to my clerk: "Well, I've always heard Lindsey was crazy, but I never believed it till today!" And when a hardened young criminal went from my court 250 miles to the Buena Vista reformatory alone, and presented himself at the gates of the prison, "the sentry" (as I was afterward told) "almost fell off the walls." Crazy? Do you know that over half the inmates of reformatories, jails, and prisons in this country are under twenty-five years of age? (Some authorities say under twenty-three.) Do you know that an English prison commission not long ago reported to Parliament that the age of sixteen to twenty was the essentially criminal age? Do you know that the Earl of Shaftesbury, after much study, declared that not two out of any hundred criminals in London had formed the habits that led to criminality after the twentieth year? I may be very crazy, and yet not be as crazy as the people who, in the face of these facts, believe that the criminal methods of our civilization are anything but a gigantic crime and a stupendous folly. Some day our descendants will read of our methods of handling criminals as we now read of how our ancestors imprisoned the insane in chains and used the methods of a Siberian jailer on the inmates of the madhouse!—From "The Beast and the Jungle" in December Everybody's.

PREDATORY LAWYERS.

Every now and then a lawyer is disbarred for some serious offense. Sometimes his offense is a crime which can

be punished by the courts. At others times it is near to a crime, but unpunishable for technical reasons. Occasionally serious abuse of patrons within the letter of the law also leads to disbarment.

There exists, nevertheless, a large class of predatory lawyers whom disbarment proceedings never reach, but who go forth to prey upon the weak and unprotected as unquestionably as if they operated with a jimmy and a kit of burglar tools in the middle of the night. The fact that they are tolerated and that they are allowed to exist in such large numbers is among the worst of the abuses that are to be charged against the legal fraternity at the present time.

These men are the ones who go forth hunting business in the form of damage suits, and who do not hesitate to stimulate suits of this kind where no good grounds for them exist. They cause continual heavy losses both to the defendants in these cases who are mulcted and to the prosecutors who must usually pay their lawyers exorbitantly heavy fees. The mere item of court costs alone is a serious waste of individual resources, while the accompanying burden upon the courts themselves by the unnecessary business they must handle is an added evil.

Such lawyers have been seen flocking to Cherry to secure damage suits against the mining company. They are the enemies of the company, of the ignorant and deluded people who intrust cases to them and of justice itself. Every railroad company has continually to fight fraudulent damage suits, the inception of which is chargeable to predatory lawyers. Most large factories have a similar burden. Our cities are notorious sufferers. In the case of the Chicago sanitary district the law as it exists actually puts a premium on such suits.

It is most difficult to phrase any rule or regulation for the bar which will leave lawyers free to do legitimate work and which yet will suppress this evil. To find the proper tests by which the offenders can be disbarred is the task of the bar itself. The public feels the need, but can do no more than call attention to it.—Chicago Record-Herald.

MOST POVERTY IS DUE TO ILL-HEALTH.

Self-preservation is the first law of nature, Nathan Straus, the philanthropist, says in *The Delineator* for December. Self-sacrifice in the interest of society is a prime law of civilization. Willingness to sacrifice one's pleasure and comfort in some degree to the needs of humanity—this is of prime importance in all charity.

I do not regard giving to charity as a form of special mercy. Devotion of a part of our wealth to those less fortunate than ourselves is demanded by justice, dictated by conscience and expressly commanded by the Mosaic law. It seems impossible for society to be just. If our present civilization really gave "equal opportunities to all and

special privileges to none," there would be very little need for charity. But society is unjust. It does not give the child in the slums the same opportunity as the child in the marble palace. Such being the case, it is not the privilege, but the duty, of every one able to support himself and those dependent upon him, to confer a part of the blessings which he enjoys upon others less fortunate than himself. It is our duty to do our utmost as individuals to redress the inevitable injustice that we perpetrate as a society.

If we recognize that to give to the poor is a just and necessary activity of the fortunate possessor of much or little, the question at once arises as to how it is best to give. A true philanthropist is anxious to give in a manner to accomplish the most good. A real philanthropist at once asks himself, "What are to be my principles of giving?" I have long ago answered this question, at least for myself. My purpose has always been "to help the poor to help themselves." I have decided that I can do this best by supplying them with pure food. I try to help the poor, and especially the babies of the poor, to keep well and grow-up strong by furnishing them with clean, germ-free, nourishing milk. Most poverty is traceable to ill-health, and most crime is traceable to poverty; so I am trying not only to alleviate misery by helping the poor to help themselves; I hope, also, to perform a social service in lessening the amount of crime. I feel that if we gave more of our money for pure food, we would need to give less for hospitals and also less for jails.

If we are to help people to help themselves we must not encourage begging by promiscuous giving. To avoid either encouraging begging, or pauperizing those temporarily in need of alms, I hit upon the plan of selling pure milk at a nominal price—for about a third of its value. So the man who receives the milk pays for it, and is not made to feel that he is the recipient of alms.

Each one must decide for himself how much he wishes to give to charity. I have again answered this question, at least to my own satisfaction. The old Hebrew law commands us to give one-tenth of our income to the poor. I have taken this as a minimum limit, always feeling that as I got more I should devote a larger proportion of what I had to humanity. "Of him to whom much is given, much is expected."

ILLUSTRATIONS OF DEMONSTRATED WASTE IN NEW YORK'S GOVERNMENT.

Wherever investigations have been made,—and all of the more important departments have been examined at least in part,—a high percentage of waste has been found in supplies, contracts, and salaries.

The following illustrations are taken from official records, and many of them are due to initiative on the part of the Mayor, the Comptroller, or department heads. Corrective measures have been taken in most of the instances mentioned.

The Park Department found no wrong in paying a salary to a woman supervisor of playgrounds who went to school instead of to playgrounds, or in leasing privileges for one-half to one-tenth their value. The Fire Department failed to test its hose for fear it would break. The Water Department had no means of preventing waste of water or undercharging. The Tenement House Commissioner admitted an enormous waste of energy because defiant law violators were not prosecuted. The Health Department had only 5 per cent to 8 per cent result from its school examinations. Two Borough Presidents were re-

moved by Governor Hughes for paying from two to five times the market value for supplies and for gross incompetence; a third ran away rather than stand trial; the examination of the fourth, though not yet completed, has disclosed similar earmarks. The Comptroller has declared that from 25 per cent to 40 per cent of the city's clerical staff, day laborers, etc., could be dismissed and public work both increased and improved. Civil Service appointees have, after discharge, recovered their positions and thousands of dollars for back pay because the law of discharge was blunderingly violated. Bellevue Hospital bought high-priced milk for tuberculosis patients and gave it to hospital employés, has paid \$50 more each for ambulances than the price offered, and attempted to hold in office an employé who was a confessed violator of law, a falsifier of records, and diverter of funds from authorized purposes. The Board of Education asked for less money for fuel and supplies in 1910 than it used in 1904, yet does not claim to have applied similar efficiency tests to its repairs, janitor, and educational services. Admitted condemnation graft surpasses the "dreams of avarice."

Waste is as inseparable from inefficiency as is effect from cause. The fact of incompetence is sufficiently established by the foregoing facts as to waste. They convinced Comptroller Metz that "a business administration would so check waste, swell revenues, and increase efficiency that in twenty-five years income would equal cost and no taxes would be necessary." The lesson of lessons is that a very great part of the inefficiency has been due to methods which make inefficiency both easy and certain. Whether a man loafs or blunders depends very largely upon what is expected of him. If nobody knows whether he goes to his office or not he will frequently stay away. If nobody knows whether and how he works when he gets there he will not do his best. To expect results without knowing what results are, never begets efficiency. In the past the most inefficient thing about New York has been its failure to find out whether individual officers and employés, offices and methods were inefficient or not. Not having tried to find them out, it has not known specifically where inefficiency existed. The gap between citizen responsibility and citizen action has been quite as great as the gap between official responsibility and official action. Even the leaders among New York citizens have made as bad a mess of what F. A. Cleveland has called the "business of citizenship" as have its officials of running a great municipal corporation.—From "'The Business of Citizenship' in New York City," by William H. Allen, in the American Review of Reviews for November.

NAPLES' UNIQUE INDUSTRY.

EVERY visitor to Naples must be impressed by the large number of tortoise shell shops in all its principal streets. The United States consul at that city describes the manufacture and sale of tortoise shell goods:

The shops are particularly attractive in appearance and handle shell and coral—for the two articles invariably go together—exclusively. The goods are noticeable and well calculated to catch the eye of tourists, who are the chief purchasers. The material comes to Naples in the rough state, the best quality being imported from the Island of Nassau, good quality from British and Dutch East and West Indies, Australia and Cuba,

while the commoner sort comes from Zanzibar and Madagascar. All tortoise shell is known as "light" or "dark," each of which designations embraces numberless varieties. In the crude state dark shell is worth \$1.25 to \$12 a pound; light shell \$5 to \$25 a pound. It is estimated that this consular district imports about \$100,000 worth per annum, and most of this is retailed in its finished state to foreigners visiting Naples. Exports to the United States are usually made through French business houses, which, of course, adds the profit of a middleman to the final retail price. It would seem that American importers could effect a saving by making direct importations.

In many cases a factory for tortoise shell consists of one room and half a dozen workmen, and in no case is the industry conducted on a large scale, the largest factory here having only seventy-five employes. As is usual in Italy, wages are low. Men receive from 2 to 6 lire (40 cents to \$1.20) per day of ten hours, and this includes the most skilled labor. No women are employed. As the workmen may be seated a good part of the time, the work is not fatiguing.

Finished tortoise shell is entirely a hand made product, no machinery being used. The tools of the trade are simple and few in number. The operation of manufacture will be most easily understood if some one article be followed through the various processes. A large paper knife with an openwork carved handle, for example, is constructed as follows: The rough shell is carefully scraped so that it may present clean surfaces and is then sawed into pieces of the proper dimensions. As the knife is to be thicker than the original shell, two or three of these pieces must be welded. First they are placed one upon another and tied with thread, then wrapped in a wet cloth, and the package placed between two pieces of wood about the size and shape of shingles, which in turn are put between flat iron plates already heated to the necessary temperature. The whole is next subjected to pressure in what appears to be a massive copy press, and in about ten minutes the pieces of tortoise shell have become one. Great skill is needed in order to know the exact degree of heat required, for this varies with the number of layers of shell wanted for a given article. Should the irons be overheated the material would be absolutely ruined.

The next step is to shape the paper knife to the exact form by filing, after which a design cut in thin paper is pasted on the handle. The open portions are cut out with a fret saw and the design carefully worked out by means of little chisels and gouges. After this comes the polishing, a branch of the work of great nicety, which takes a great deal of time. The paper knife is subjected to a thorough rubbing with pumice powder applied with a stick of orange wood, and rubbing is then repeated with tripoli powder and

olive oil. Finally a course of brushing with a stiff brush completes the knife for market.

When curved articles are to be made in any quantity special molds are employed in place of the heated iron plates, but the process is virtually the same. If only one article of a certain curved pattern is to be made the shell is "built up" to the required thickness and bent to the proper shape by hand, while still pliable, after pressing in the flat irons. All of the work in manufacturing tortoise shell may rank as skilled labor, with the possible exception of scraping the crude shell.—*Selected.*

Between Whiles

Maud: "She is a woman who has suffered a good deal for her belief."

Ethel: "Dear me! What is her belief?"

Maud: "She believes that she can wear a No. 3 shoe on a number 6 foot."

To Stop a Boy Catching Cold.

Mrs. Jubb—How careful your little boy is of his health! My boy is constantly running out in all sorts of weather, without overcoat or overshoes, no matter what I say. How do you manage?

Mrs. Briggs—When my boy catches cold I give him cod liver oil.

Mama's Business.—Little Minna was saying her prayers. When she had finished her usual petitions her mother said: "You have forgotten, dear, 'Make Minna a good girl,' you know."

"Oh, mother," she answered, reproachfully, "don't let's bother God about that, that's your lookout."—Harper's Magazine.

A Recompense.—Torke—"Your daughter's musical education must have cost a lot of money?"

De Porke—"Yes, it did, but I've got it all back."

Torke—"Indeed!"

De Porke—"Yes. I'd been trying to buy the house next door for years and they wouldn't sell. But since she's come home they've sold it to me for half price."—Harper's Weekly.

The Manly Man.—"After you've been two weeks in the house with one of these terrible handy men that ask their wives to be sure and wipe between the tines of the forks, and that know just how much raising bread ought to have, and how to hang out a wash so each piece will get the best sun, it's a real joy to get back to the ordinary kind of man. Yes, 'tis so!" Mrs. Gregg finished, with much emphasis. "I want a man who should have sense about the things he's meant to have sense about, but when it comes to keeping house, I like him real helpless, the way the Lord planned to have him!"—Youth's Companion.

ON THE SWEET GRASS

J. F. Appleman and wife, Plymouth, Ind., and E. E. Arnold, Elgin, Ill.

Glass Brothers Land Company, Big Timber, Montana.

Big Timber, Mont., May 8, 1909.

Gentlemen: I have taken several days in looking over Sweet Grass County, Montana, and have looked over your irrigation project. I have been careful in my investigation, looking into the grain, stock and fruit raising, and must say that I am more than pleased with what I have found and wish to recommend same to my friends; and I also feel that anyone looking for a home should not wait until tomorrow, but go now as these lands will surely be sold in a short time on the liberal terms you are offering settlers. The lands and irrigation works are far better than you have told me.

Thanking you for your kindness, and wishing you success, I am,

Yours truly,

(Signed) J. F. Appleman, Plymouth, Ind.

Formerly State Superintendent of the Mexico (Ind.) Old Folks' & Orphan Children's Home.

Glass Bros. Land Co., Big Timber, Mont.

Elgin, Ill., Oct. 18, 1909.

Gentlemen: It was my pleasure to spend several days investigating your lands and irrigation project in Sweet Grass County, near Big Timber.

The longer I looked the better I was impressed with the possibilities of the country. Alfalfa fields were the finest I ever saw. Oats, wheat and other grains were in abundance. I am fully convinced that apples will grow to perfection there. Wherever orchards were seen the trees were full of perfect apples and not a wormy one could be found.

Your irrigation system is well constructed and my opinion is that it will supply more than ample water for your lands.

I was so well pleased with the conditions and possibilities of the country that I purchased 160 acres and propose to put a tenant on it and improve it, and also expect to put at least 19 acres in apples in the spring.

Persons desiring to better their conditions should investigate your lands. Your terms of sale are very liberal.

With best wishes, I am,

Yours very truly,

R. E. Arnold.

We invite you to investigate the possibilities of these lands.

For price, terms, etc, address,

GLASS BROS. LAND CO.

BIG TIMBER, MONTANA.

Down in Water Street

By Samuel H. Hadley

A sequel to the life of Jerry McAuley. 25th Thousand. A story of sixteen years' life and work in Water Street Mission, the famous Jerry McAuley Mission. This thrilling and intensely interesting book is mainly autobiographical, but it begins with a short account of Jerry McAuley.

Best Book on Rescue Work

"This is by far the best book on rescue work that has been published in recent years. It is a real life story, told in a simple and unaffected way, that carries with it to the reader the conviction of absolute truth. One may search books of fiction in vain for characters as unique as 'Old Uncle Reub,' 'Pop Lloyd,' 'Bowery Ike,' and 'Billy Kelly.'"
—Christian Herald.

It is not only a living testimony to the renewing power of the Gospel, but it is a valuable step in methods of personal work with those who are lost in vice and villainy. Intensely interesting. Many full-page illustrations. 254 pages. Cloth.

Price, postpaid,\$1.10

Brethren Publishing House

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Low Boat." One hundred pages of the most delightful

reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

Price, prepaid,50 Cents

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Late and Early Card

NEFF'S CORNER

If my plans as now fixed are realized, myself, wife and babies will be sitting in the sunshine of perpetual summer ere these lines appear in print. We expect to be busy, but never so much so but that, with plenty of help available, we can do more. One brother who has bought land in Mexico wants a number of acres cleared at once and sown to alfalfa. Some will want their land planted to corn, some cotton, some garbanzas, some sugar cane, some bananas, some oranges or other fruit, and my part of it will be to employ native help and oversee this work of improvement and cultivation. In fact one of the conditions that makes farming operations so very profitable in Mexico is the cheap labor there. Good hands can be had at 45 cents per day, they boarding themselves. This being the case, many will buy land in Mexico (are doing so, in fact) and have it farmed for the handsome income it brings, and others with a view of going to it after it has been brought into a good state of cultivation. By making a down payment of \$6.25 per acre for the land and investing a small sum in improvements investors realize a good income from their land in a very short time. The land can be bought in tracts of ten acres or more. For further information address:

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

CALIFORNIA HOMES

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. California appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"The Alfalfa shown above was cut five times this season, as follows, May 20, yield 8 tons, July 1, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.

J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.

C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, rates for homeseekers.

Post Card Albums

Our albums are of the most popular size and shape and will please you. They are of the substantial kind and yet neat in appearance. All we ask is that you send us a trial order.

No. 1101.—Handy Style. Bound in black silk cloth, plain, side title stamped in white, Size $5 \times 7\frac{1}{2}$ inches. Holds 100 cards, 1 to the page. **45c**

No. 2201.—Small quarto style. Size $7 \times 9\frac{1}{4}$ inches. Bound in Black silk cloth, plain side title stamped in white. Holds 200 cards, 2 to the page. **70c**

No. 2202.—Same as No. 2201 only bound in Olive Green Cloth, with assorted fancy stamping. **70c**

No. 2001

No. 2002

No. 3301.—Medium Quarto Style. Size $9 \times 11\frac{1}{4}$ inches. Bound in Black silk cloth, plain, side title stamped in white. To hold 300 cards, 3 to a page. **\$1.15**

No. 7004.—Royal Black "Viennese" Post Card Album. Bound in imitation leather.—Sea Lion Grain—with Gilt title on side. Size $10\frac{1}{4} \times 15\frac{1}{2}$. Holds 500 cards with 4 to a page. "Viennese" looks like Genuine Leather and wears better. **\$2.50**

(Reduced Facsimile of No. 7004.)

No. 7101.—Royal Post Card Album. Bound in black "Viennese" Imitation Leather. Walrus Grain. Holds 100 cards, 1 to a page. Size $5\frac{1}{2} \times 8$ inches. Gilt title on side, **65c**

No. 9101. Royal Padded "Viennese" Cover Post Card Album. Bound in "Viennese" Imitation Leather. Black Walrus Grain. Gilt title on side. Size $9\frac{3}{4} \times 6$. 100 cards to album. 1 to page. Artistic "Deckle Edge" leaves. **\$1.00**

No. 9102. Royal Padded Cover Post Card Album. Viennese Covers. Imitation Leather. Black Walrus Grain. Size $9\frac{1}{2} \times 11\frac{1}{2}$. Gilt title on side. Holds 300 cards, 2 to a page. "Deckle Edge" leaves. New and artistic. **\$2.00**

(Reduced Facsimile of No. 9102.)

No. 4922.—Royal "Viennese" Post Card Album. Bound in black Viennese Hornback Alligator Grain Binding. Holds 200 cards, 2 to a page. Size $8\frac{1}{2} \times 10\frac{3}{4}$. Gilt title on side. **\$1.25**

No. 4922½.—Same as 4922, only holds 300 cards. **\$1.50**

Read and Learn

OF THE

Great Future for Miami Valley

in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

FARMERS DEVELOPMENT COMPANY

Told at Twilight; Or Bible Stories That Never Grow Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price,30 cents

(Postage extra, 6 cents.)

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

THE FOLLOWING IS TAKEN FROM THE NAMPA RECORD, NAMPA, IDAHO.

During the past year not only a few acres have been sold for orchard purposes but thousands have been sold. Those who have bought and of whom it was written that they would later open a campaign of orcharding, were in a large majority of cases, men who were going into the undertaking business because they were convinced of the practicability of the industry in this section. The opening of next spring will witness the greatest campaign of orchard planting that this country has ever seen. The thousands of acres purchased for that purpose will be planted and the campaign of orcharding will have begun in earnest. Already we have in our midst men who made purchases and who are apple raisers of wide experience. They have come to make arrangements for the planting of their lands to apple trees next spring. Among these, of much importance, are Prof. S. A. Beach, agriculturist of the college of Iowa, and C. K. Scam, of Geneva, N. Y.

The faith of these whose experience is so wide, would certainly lead us to conclude that this is something of a fruit country and the time is not far distant when these lands will be valuable far beyond the present and rather in keeping with values that now exist in those other fruit producing sections where \$1,000 per acre is a common thing.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

SHOULD WE HAVE AN INCOME TAX?

WILLIAM E. JUDY

AMONG the great number of important and vital questions before the American people to-day must be placed that of an income tax, which resolves itself into the two queries: *Should we or should we not, have an income tax? And if we should, what kind of an income tax?* This, like all other national questions, needs study, consideration and discussion in order that the public may become fully informed—an essential for enlightened public action.

What is an income tax?

It is a tax levied upon the income of individuals directly or collected from income at its source in the form of a tax upon dividends, interest on bonds, etc. It may be *uniform and proportional*, the same rate being levied upon all incomes, large or small; it may be *progressive and graduated*, the rate increasing with the income. Differentiation may be made between the various forms of income, such as income from labor or property, temporary or permanent incomes, etc. It is the consensus of opinion that for the present, at least, a progressive and graduated tax is inexpedient and inadvisable. The country's first attempt should be along the line of the former and simpler method, viz., uniform and proportional. In the following discussion this kind of income tax is made the basis of argument and explanation.

The income tax is no new and untried method of taxation. Solon, the great lawgiver of the Athenians, introduced the principle in his system of taxation. In modern times France, in 1793, was the first to introduce it; today an income tax produces ninety per cent of her revenue. Six years later Great Britain adopted it, and the same has ever since maintained its position as an integral part of the British financial structure. During the second half of the last century six other European countries and also New Zealand and Australia adopted an income tax in one form or other.

In our own country it was first advocated during the War of 1812 by Secretary Dallas and actually adopted in 1862. For the next ten years an income tax was an American reality. However, no satisfactory machinery was established for its application; individuals submitted estimates of their incomes. At first the rate was three per cent on the income in excess of \$800. In 1867 it was increased to five per cent and the exemption made as low as \$600. It was repealed in 1872, not because it was a failure, but because there was no further need of it, it having been adopted purely as a war measure. Not until 1894 was it again introduced, this time as a part of the Wilson Tariff Bill; but it was short-lived, as the Supreme Court declared it unconstitutional on May 28 of the same year.

What does the Constitution say in reference to an income tax? Article one, section nine, reads: "No capitation or direct tax shall be laid, unless in proportion to the census or enumeration hereinbefore directed to be taken." It is manifest that an income tax, which is a direct tax, could never be justly adopted on that basis, that is, that it be levied in proportion to population. Therefore, an amendment would have to be made to the Constitution, giving Congress the power to levy an income tax. What promises to be the sixteenth amendment to that almost sacred document, the Constitution, was passed, unanimously by the Senate and almost so by the House on July 12 of this year—an amendment giving Congress power to levy an income tax. In order to become so, it now remains to be ratified by at least three-fourths of the State legislatures (thirty-one), which will likely be done.

The Federal government should levy an income tax if it needs one and if the tax will serve its purpose better than any other tax. The purpose of an income tax is revenue. Let us, therefore, answer the three questions: Do we need more revenue? Will an in-

Historic New England

T. H. FERNALD, BELFAST, MAINE

Chapter V.

MAINE and New Hampshire were so closely united to Massachusetts that they have almost a common history. About two years after the Pilgrims landed, Gorges and Mason obtained a grant of a tract of land of the New England Council, lying between the Merrimac and Kennebec, and the St. Lawrence Rivers, which they called Laconia. The patent being afterwards dissolved, Mason took the land west of the Piscataqua and called it New Hampshire, for Hampshire County, England, his home. The settlers were for a long time sore vexed with suits brought by the men in whose hands the grant had fallen. Gorges took the land lying to the eastward and called it Maine, to distinguish it from the islands, which are very numerous along the coast. Massachusetts claimed this territory and to establish it paid \$6,000.00 to the heirs of Gorges. Maine was finally separated from Massachusetts in 1820. The feeble settlements of New Hampshire placed themselves under the protection of Massachusetts.

About eleven years after the landing of the Pilgrims, Lords Say-and-Seal and Brooke obtained the grant of land from the New England Council, now embraced in Connecticut. The Dutch claiming the Connecticut Valley, built a fort at Hartford before the English could take possession, and commenced traffic with the Indians. Traders sailing up the river were stopped by the Dutch who threatened to fire upon them, but they continued and landed at Windsor. Many people from Boston, brought thither by the rich lands, settled near. In the autumn of 1635 John Steele, of Cambridge, led a pioneer company "out west" as it was then called, and laid the foundation of Hartford. The next year Thomas Hooker, a most eloquent and estimable pastor, came with the main band, driving their flocks before them through the wilderness. John Winthrop established a fort at the mouth of the river, and shut out the Dutch. This colony was called Saybrooke in honor of the proprietors.

John Winthrop appears in history without a blemish. He was highly educated and accomplished, and was upright and generous. In the bloom of life he left all his brilliant prospects in the old world to follow the fortunes of the new. After his father had made himself poor in caring for the Massachusetts Colony, his noble son gave up all his large inheritance, voluntarily, to "further the good

work." Through his personal influence and popularity at Court the charter was procured from Charles II that guaranteed Connecticut her freedom. Soon after the colonists of Connecticut became settled in their new homes, the Pequod Indians tried to persuade the Narragansetts to join them in an attack upon the settlers, but Roger Williams went one very stormy night to the wigwam of Massasoit. Although a Pequod messenger was there Williams prevailed upon the old chief to remain at home. The Pequods being obliged to fight alone, commenced by killing thirty of the Colonists, but Capt. Mason attacked their stronghold on the Mystic River at daybreak on June 4, 1637, and surprised the Indians. Capt. Mason seized a firebrand and hurled it among the wigwams, and the few Indians who escaped to the swamp were hunted down, and the tribe was destroyed in a day.

The three Connecticut Colonies, the New Haven, the Connecticut and the Saybrooke, were reduced to two. The first written constitution made by the people was made by the Connecticut Colony in 1638.

Several attempts were made to infringe upon the rights of the people, and in 1693 Gov. Fletcher ordered the militia placed under his own command. Having called the colonists out to listen to his royal commission, he began to read, when Capt. Wadsworth ordered the drums to be beaten. Fletcher ordered silence and began again. "Drum! Drum!" ordered Wadsworth. "Silence!" cried the governor. "Drum! Drum! I say!" replied the captain; and turning to the governor with a meaning look, he added, "If I am interrupted again, I will make the sun to shine through you in a moment!" The governor did not press the matter.

While Roger Williams was not the first European to live within the limits of Rhode Island, he was really the founder of that State. William Blackstone, who being as dissatisfied with the yoke of his "lord brethren" in Boston as with that of the "lord bishops" in England, had moved to the banks of what is now the Blackstone River, near the present city of Providence. He acknowledged the jurisdiction of Massachusetts and had no idea of founding a new colony. Williams impressed upon the people his favorite idea that "the civil power has no right to interfere with the religious opinions of men." Williams went to England and procured a charter, and on his return the people met, elected

officers, made laws, and gave freedom of faith and worship to all. This was the first legal declaration of religious liberty adopted in England or America.

Rhode Island was so called from its reddish appearance, the Dutch calling it *Roodde* or Red Island.

When Rhode Island wished to join the New England Union, Massachusetts refused to consent, on the plea that they had no charter. She also refused Rhode Island traders a landing on her soil and threatened arrest if they ventured across the line. She also compelled Williams, when he went to England, to go from New York in a Dutch vessel, and sail *via* Holland

debt, resolved to prosecute the war with greater energy than ever.

In 1710 a squadron of thirty-six vessels with four regiments of troops left Boston and began the siege of Port Royal. The garrison was weak, and the commander had not the courage of his predecessor, supplies ran out, famine came, and after a feeble defense of eleven days the place surrendered.

The General Assembly of Massachusetts decided that their "officers should be paid in accordance to the importance of the position they held, and for actual service only." The royal commission gave to each a fixed salary, which was, occasionally, out of proportion to the services rendered. This matter was settled after many years, to the advantage of the people.

With the founding of Saybrooke, the English had possession of the most important river in New England—the Connecticut. In a few years several enterprising villages were built along the valley.

In 1639 New Haven was founded by Colonists from Boston. At a convention held in a barn they adopted the Bible as their constitution. They

called their government the "House of Wisdom," and the leaders were called the "Seven Pillars." The greatest of the "Pillars" Theophilus Eaton, was made Governor for twenty years consecutively.

The civil organization of Connecticut dates from 1639. Delegates from three leading towns met at Hartford and adopted a constitution, the only qualification of citizenship being allegiance to the State. All religions were alike respected.

Connecticut became a part of the union of New England in 1643. New Haven, which had not adopted the Connecticut constitution also united. Saybrooke was annexed to the parent colony in 1644. They were constantly in fear from the Dutch up to the middle of the century, but in 1650 Gov. Stuyvesant and the Connecticut Commission met at Hartford and framed a treaty by which the boundary between his province and that of the English was established.

With the restoration of monarchy in England, King Charles II was recognized by Connecticut as their sovereign. This was not done so much by political principles as from the hope of obtaining a charter for

Wiscasset, Maine, Old Fort

instead of direct from Boston. Through the influence of Rhode Island, Maryland extended protection to all forms of Christianity.

In 1628 Dutch vessels were seen in all the harbors, rivers, and inlets of Rhode Island and vicinity.

Massachusetts and New Hampshire were at one time under the authority of the Earl of Bellemont, an Irish nobleman of excellent character, but Rhode Island and Connecticut refused to acknowledge his rule (1696). His administration lasted only until the year 1702.

With the war for Spanish succession, the English settlements of Massachusetts and Connecticut went to war, as the present Kingdoms were trying to settle by the sword who should occupy the Spanish throne (1703-04.)

In 1707, as the war dragged on Massachusetts planned an expedition to capture Port Royal from the French, and a fleet bearing one thousand soldiers sailed from Boston, but Baron Castine, commander of the French garrison, conducted the defence so skilfully that the English abandoned the undertaking. Massachusetts gaining nothing but discouragement and

the colony from the King, for they had not as yet secured one. They sent the younger Winthrop to London for this purpose, he taking with him the charter which had been adopted at Hartford. The King was induced to sign it, and Winthrop returned to his people with great rejoicing. The charter, which was very liberal, granted everything but independence to the people. For fourteen consecutive years Winthrop was chosen governor, and the population increased rapidly; peace reigned; workmen were not disturbed in the field or shop.

This charter was a most precious document. Twenty-four years after, Gov. Andros marched from Boston over the route that Hooker had led his little flock fifty years before, "glittering with scarlet and lace," into the assembly at Hartford, demanding the charter. A protracted debate ensued. The people crowded around for a last look at this guarantee of their liberties. Suddenly the lights were extinguished. When they were again lighted, the charter was gone. William Wadsworth had seized it, escaped through the crowd, and hidden it in the hollow of a tree, which has ever since been famous as the "Charter Oak." However, Andros pronounced the charter government at an end, and wrote "Finis" at the close of the minutes of their last meeting. When the governor was deposed in Boston the charter was brought from its hiding-place, and the general court reassembled, and the "finis" disappeared.

For many years the Atlantic coast was infested by pirates. A New York shipmaster, named William Kidd, was sent out to cruise against these robbers. He turned pirate, himself, and became the most noted of all. Returning from his cruise, he was at length captured while walking boldly through the streets of Boston. He was carried to England, tried and hung. His name and deeds have been woven into popular romance, and the song, "My Name is Captain Kidd," is well-known. It is believed that he buried his treasures on the coast of Long Island, or on the banks of the Hudson River, and some believe even on the coast of New England. These localities have been searched oftentimes for the Kidd treasures.

WHY ARE WE LIVING WHERE WE ARE?

H. D. MICHAEL.

THE sun was peeping upon the distant hills, making all as pleasant as possible as our train pulled out from our station and we were soon speeding along through a sagebrush plain. But having seen it at a slower pace and pretty thoroughly I was soon watching my fellow-passengers and studying them while they watched the country we passed. The land is of a loose volcanic ash and sandy loam soil and fairly well covered with sagebrush, and as we passed along it was not necessary

to be a mind reader to tell the passengers' thoughts, as they were plainly written on their countenances.

We were in sight of homesteads and cabins out on the bare sage plain and all aboard seemed to be thinking, Desolation! desolation! what a wild, lonesome and forsaken country that is. Needless to say, I didn't tell them that my home was just back a few miles from the track there, though I was not ashamed of it. But we were soon on up the line and seeing the waving and ripened grain awaiting the harvest, while many began to take notice and seemed to wonder whether that desert just passed would ever raise such crops, seemingly not knowing that to be the history of all the wheat lands, that they seem worthless at first.

We were soon at the station where we must change cars and there met some friends going our way which made it much more pleasant, as we were to go on a cross country line between the two main railroad lines and it was one of those accommodating little lines that run the trains slow enough that all points of interest may be seen easily and still leave a margin for visiting friends on board.

This being new territory to me, the first impression I received was at a small village. It was built in a coulee with rocky bluffs near frowning down upon it and the land around seemed almost as dry, sandy and bare as the Sahara Desert. The wind was blowing a gale and the dust and sand in the air seemed almost thick enough to cut with a knife, and I could not help thinking of what thoughts I thought were in the minds of the others as they passed my home.

Then the question presented itself to me, Why are we living where we are? Soon we were going on again and came in sight of the green fields of grain, for it was later here than where we had passed and the thought only deeper fastened on my mind. Still farther on we came to still more favored parts, for the crops were heavier, while nice orchards stood guard near each farmhouse and more stock and various crops showed that there was more diversified farming being done, but on getting into the timber belt it looked more pleasant than ever and seemed to be the ideal place to live, with the timber crowning the hilltops and crowding the creek banks, while the cattle leisurely strolled around selecting the best grasses.

All this change coming in so short a distance only served to press me the more with the question as to why so many lived in those desolate parts while such beautiful homes were so near. But my answer would be, my future prospect and expectations are my reason for living where I am.

We expect this land to be irrigated some time and become a veritable garden spot of the Northwest, and to have a good home at that time, we are now living where our surroundings are not so pleasant as some.

But I have decided it is more the person than the

place that tends to give happiness, for some would not be as light-hearted and happy in a palace as others would in a cabin in a desert or in the backwoods.

Then in the little villages I suppose some are there expecting to await the growth of a large city while others are there just to ply their trade, for where would men not live for money?

But the others may have been living in their homes with genial surroundings, not thinking of or caring what the future might bring. Now not to criticise or condemn any for their choice of residence in this broad land of ours, else I might receive a large share, but are not the same classes found in the spiritual life? Those that are living a true Christian life for the promises we have of the future, those that are living only for gain, and those now having and enjoying all the sinful pleasures and enjoyments of life, content to drift on and think of nothing higher or better. Let us all then take note of where we are living and why we are living where we are. If we are living a Christian life, hoping for and through faith seeing our reward beyond, let us look well to our foundation and see that it is safe, then press on and "be perfect, as your heavenly Father is perfect." Matt. 5:48.

If we are living as we are for gain only, let us reconsider our way and choose that good part that shall not be taken from us. But if we are just living as we are because our surroundings seem pleasant and because we can drift along reveling in all the world's follies and pleasures, let us awake! "Awake! thou that sleepest, arise from the dead, and Christ shall give thee light." Then receive the light, have true enjoyment here and a reward awaiting us beyond, "for the wages of sin is death, but the gift of God is eternal life through Jesus Christ our Lord."

Then we can give a reason why we are living where we are and a reason of the hope that is within us.

Pasco, Wash.

FRUITS OF INDIA.

ELLA M. BRUBAKER.

THE fruits in India differ quite a bit from those you have at home, and yet I have been much surprised at the similarity in many respects. One of the most common of India's fruits is the mango. It is to the people of India about what the apple is to the Americans. It contains one large seed something like a peach seed, only much larger. The pulp is yellow when ripe. The improved kinds are cut and the pulp eaten like a peach but the common ones are cut open at one end and the juice sucked out. They are oval-shaped and range in length from three to six inches. The ordinary ones often have turpentine in one end. The newcomer is likely to get one of this kind for the first one that he tries to eat, then he thinks mangoes are no good. But

if he persists he will soon find out how delicious they really are. Then if he does get a little turpentine occasionally he does not mind. Taken green and stewed, the sauce is very much like apple sauce.

The pomelo is a large, round fruit six or seven inches in diameter. It grows in sections like the lemon and orange but is red inside. It is often bitter like quinine. Some say this serves the place of quinine for our system. We use it very much on our tables.

The papai is something like a muskmelon. At first I thought they were not as tasty as a muskmelon, but now since I know how good a good papai is, I think a muskmelon would be tasteless in comparison. They have a rich, yellow, juicy pulp. We eat this pulp with a spoon and it almost melts in the mouth. The trees grow up very quickly and bear at the end of the first year. They need to be renewed every three years.

The custard-apple is a very sweet fruit and does taste very much like a real custard pie. Its peel and all grows in half-inch sections and when ripe falls apart very easily. Each section contains a seed the size of a watermelon seed but much thicker.

Star-fruit is a yellow and very tart fruit. It is about three inches long and a cross section of it has the shape of a star.

The tamarind is a bean-like fruit that grows on a very large tree. These we soak, boil, strain, sweeten and boil again, then we have our apple butter.

There is a red blossom-like fruit called the beanda which we stew and we have our cranberry sauce. It also makes a very nice jelly.

We have sweet limes and sour limes. The sweet ones are eaten like oranges; the sour ones make nice lemonade.

We can get oranges the year round in Bombay. But I have not seen them grow in this part of the country.

We have a number of varieties of plantain or banana. In color they are red, yellow and green. Our trees are bearing now for the first time. Each tree bears one bunch only and then it is cut down.

The cheverdu is a fruit that looks like a large cucumber well ripened. But the cucumbers of this country are often fifteen or eighteen inches long and five or six inches in diameter. The cheverdu also resembles a cucumber inside except that it is sweetish and mellow. We usually cut it up, sugar it and leave it set awhile before eating.

The watermelon is also found here but in this part of the country it is usually colorless and tasteless. Only once have I seen one as rich, red, and sweet as those you have in America.

The guava, found in some parts of the United States, is also found here. It is a pear-shaped fruit. The pulp is yellow in some and red in others, and is somewhat grainy. The center is full of seeds something like the tomato seed.

The jack fruit is a very peculiar fruit. When hanging on the tree it looks something like a swarm of bees. The odor of the pulp is rather offensive. It is the one fruit I have not yet learned to like.

Dahanu, India.

HOME SCENES.

M. M. WINESBURG.

WHEN persons have been away from their birthplace for some time and then return to it again, they suddenly realize that there are interesting spots in their own section of the country, around which cluster either history or traditions, and also some fine scenery, which being accustomed to in times past seemed commonplace.

The above reflections were impressed forcibly on my mind the next evening after my return to my native city, as I sped over the familiar road on the motor car—on my way to visit some friends who lived twenty or more miles from the city. The traction line runs all the way for about twelve miles along the Ohio River. On one side tower the blue hills of Virginia, on the other side of the river roll away the hills of Eastern Ohio, a section rich in historical recollections.

Here in the busiest portion of the city—on Zane's Hill—once stood old Fort Henry, and it was here that Betty Zane ran the gauntlet of warfare and carried powder in her apron to the beleaguered fort. Here also are left many traditions of our famous Louis Wetzel, and one street in the city bears his name.

Several miles south of the city we glide past an old two-story log house which is claimed to have been built in 1777. The house is in a dilapidated condition but it is still a landmark of the past and gone ages. Soon we are at the head of the Narrows, another historical spot in the annals of West Virginia, for here Captain Cook and twenty-four men were ambuscaded by the Indians and killed in that long ago but forgotten past. Soon the car is winding around the steep hillside and from the window one can look down on two lines of railroad below them and the rippling waters of the river.

At the Narrows, on the Virginia side of the river, the

hills are almost straight down to the water and there would be a fine chance of landing in the river if the car should jump the track. Opposite the Narrows, on the Ohio side, spread out wide valley lands, and while riding through the historical Narrows one has a fine view both up and down the river, and also of the valley opposite.

At Moundsville we glide past the courthouse, where Marshall County has erected a fine monument to her loyal sons of '61—and from the car one can almost see the mound which has given the town its name. By what race of people the mound was erected, will for-

Ebenezer Zane's Old Log Cabin, the First Building Erected in Wheeling. Built 1769, Torn Down 1908. This is the Cabin to Which Elizabeth Zane Made Her Heroic Dash for Powder During the Siege of Fort Henry by the British and Indians.

ever remain a mystery, but years ago when the mound was opened a lot of Indian relics were found inside of it. The mound is large and conical in shape and crowned on its summit with forest trees. I have walked over the top of the mound and looked down into it; but I have never been inside of it. There is a report that the mound was to be leveled down and the ground laid out into building lots, but I hope that it is only a report, for I think historical objects should be preserved, especially when they have given the town its name.

At Moundsville we took the train for the remainder of our trip. Some places there is some fertile valley land, and in other places the hills are almost straight up and down, while the road is so full of sharp curves that it has given rise to the old joke,—that anyone standing on the rear platform of the hind car could shake hands with the engineer in the cab.

About eight miles out we passed the last historical

spot, that we would pass on that trip, which is a huge rock telling all passersby that it was there, that the B. & O. Co. completed its line on Christmas eve, 1852.

In the passing glance one only sees a huge rock with its cleancut face bearing the above inscription, and while it does not proclaim any great deeds in warfare, yet it tells a story of feats of engineering through tunneled mountains and dark gorges, and across swift rushing streams, a story that connected the Eastern Coast with the Ohio Valley.

IN SCHOOL

SOME ACHIEVEMENTS AT M. C. I.

OUR Fall Term's work ended Dec. 3, 1909. During no previous period in the history of this school was there manifested greater interest and enthusiasm than the last named term. All seemed to have entered into the work with the proper spirit. We have all reasons to believe that this interest will not only continue but will increase as we progress farther into the winter.

A most valuable improvement has been recently made in our system of lighting. Each student's room is now lighted by a large twenty-candle power electric light. The chapel, halls, and all recitation rooms are furnished with large bulbs, supported by chandeliers. We gladly welcome these newcomers.

To our biological specimens has been added the skeleton of a large dog. It was prepared according to the method described in last article. These specimens are all carefully preserved for future study and comparison. The purpose in this is to gain true ideas of the various structures of vertebrates.

In our biological work we have completed the study of the protozoans. They are animals composed of a nearly jelly-like substance called sarcode. They possess no distinct or separate parts and have no definite body cavity nor traces of a nervous system. The present species of study is asteroid or starfish. It is covered with a tough leathery skin beset with prickles and has the form of a star with five or more pointers, radiating from a central disk. On the middle of the under surface is the mouth which opens into the digestive system. The latter sends prolongations into every ray.

The preparatory class in zoölogy has given the amphioxus a careful study. This is a genus of the very lowest form of vertebrates. They are a small lance-shaped, fish-like animal. At present the class is operating with the fish (pisces).

The physics class has finished the study of dynamics. The following are some interesting laws most of which

were received from the text. We have the apparatus to verify some of them. Newton's laws of motion are as follows:

(1). Every body continues in a state of rest or of uniform motion in a straight line, except when it is compelled by external forces to change that state.

(2). The acceleration of a body is proportional to the unbalanced force acting upon it and is in the direction of the force.

(3). To every action there is an equal and opposite reaction.

It was interesting to the astronomy class to learn that the following are the mean distances of the nine planets from the sun:—(1). Mercury, 36,000,000 miles; (2). Venus, 67,000,000; (3). Earth, 93,000,000; (4). Mars, 141,500,000; (5). Asteroids, 280,000,000; (6). Jupiter, 483,000,000; (7). Saturn, 886,000,000; (8). Uranus, 1,800,000,000; (9). Neptune, 2,800,000,000. Their diameters are as follows: (1). Mercury, 3,000 miles; (2). Venus, 7,700; (3). Earth, 7,918; (4). Mars, 4,200; (5). Asteroids, 10 to 500; (6). Jupiter, 86,000; (7). Saturn, 73,000; (8). Uranus, 32,000; (9). Neptune, 35,000.

The students of history have taken careful notice of the gradual westward progress of civilization. The rude oriental civilization was shifted westward to Greece and there it received wonderful improvements. Our present study has traced it no farther. One point has been especially emphasized by our instructor: "The conditions under which we as an American people exist are far superior in every respect to those existing in any of these oriental countries." This ought to inspire joy and enthusiasm for our own institutions in the heart of every American.

The logic students have carefully considered the two main views of the source of knowledge; namely, (1). Rationalism, (2). Empiricism. The former asserts that all knowledge is derived from general principles. Some of these principles have been regarded as innate and therefore deserve the name of *a priori* propositions. The latter maintains that all knowledge is obtained from experience which is furnished us through the senses. Both of these theories are true in part; but neither to the extent their advocates have claimed.

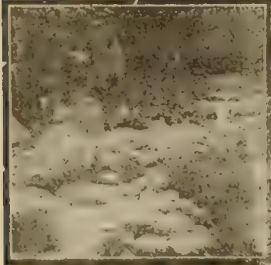

The commercial and phonographic departments are progressing nicely under the very best equipments and instructors. Students, pursuing this work, find it interesting and practical. The Pitman-Howard system of phonography is employed.

Union Bridge, Md.

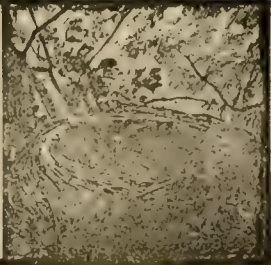

JOHN E. DOTTERER.

TOLERATE no belief which you deem false and of injurious tendency, but arraign no believer. The man is more and other than his belief, and God only knows how large or small a part of him the belief in man may be.—*A Canon of Coleridge.*

NATURE STUDIES

THE RAINBOW.

JOHN H. NOWLAN.

IN all ages and among all people the rainbow has been an object of popular interest. Many are the myths and legends surrounding this wonderful production of nature.

Today it has been stripped of all its mysticism and its formation explained along scientific lines. Yet, in spite of this, those old legends of centuries ago are handed down to us in the stories of childhood.

Now, we know that a rainbow is only the reflection and refraction of light, but even yet many are ignorant of the real cause of it. If a ray of light from the sun be admitted into a dark room it makes a circular spot. Let the spot fall on a glass prism and it will be refracted and at the same time decomposed into the seven primary colors. To show it best let it fall upon a white wall or screen. Instead of a round spot it will be rather oblong.

These colors will not occupy equal spaces on the screen. Violet occupies more than one-fifth of the whole and orange less than one-thirteenth of it.

The colors in their order are violet, indigo, blue, green, yellow, orange, red. If a card be painted in the proper proportions with these colors and then revolved rapidly none of the colors will be seen, but instead it will appear white.

Any two colors are said to be complementary when, if combined in the proper proportion, they will produce white. Those separated by one-half the length of the spectrum are complementary; as red and green, yellow and violet, orange and blue.

A color shows to best advantage when shown beside its complementary color. This is the reason why in arranging bouquets some look better than others though all are composed of the same kind of flowers.

But I am wandering. It was my intention to write about the rainbow and not to give a discourse on light.

When the sun shines on falling water or on mist at the proper angle the drops act as prisms and a rainbow is formed.

Have you ever speculated on how far away the bow really is? Sometimes it seems to be near and then again it seems miles and miles away. The only time I ever had an opportunity of proving the distance was during a shower last summer when I was called to

"see a rainbow in our garden." Just east and not one hundred yards from the house is a grove and the bow was distinctly visible west of the trees; in fact it was an unusually brilliant display.

Various sacred writers referred to the rainbow, the first (Gen. 9) in the case of Noah where it is called the bow of promise. It was to be a token that no more would a flood cut off life from the earth.

A poet thus describes the first appearance:

"And when its yellow luster smiled
On mountains yet untrod,
Each mother held aloft her child
To bless the bow of God."

Ezekiel (chap. 1, verse 28) describes the glory of one of his visions as being like "the appearance of the bow that is in the cloud in the day of rain." St. John tells of a rainbow round the throne (Rev. 4:3) and the angel who announced that time should be no more had a rainbow upon his head (Rev. 10:1).

The old Greek gods let the rainbow down from heaven and over it passed the goddess, Iris, on the errands of the gods.

The Zoroastrian bridge, Chinevat, ascended from the top of the mountain, Albordj, to heaven.

With the wild Norsemen the bow was also a bridge to the abode of the blessed. To them it was known as Bifrost and reached from Migard, the earth, to Asgard, the home of the gods. It was the only way to Valhalla, the home of the brave. Over it only those who had done deeds of valor were allowed to pass; and when Heimdall sounded his horn to summon the gods to meet a hero was the only time when it was seen by mortal eye.

No more do the guardians conduct the favored ones across that bridge while the luckless, or deedless, are allowed to fall and be lost. The horn is silent and the bridge no longer reaches to Asgard; but still we look upon the rainbow with a feeling of awe, almost if not quite as great as that of the ancients.

From the Emerald Isle, the land of poetry and song, come many legends about the rainbow, showing the intensely religious nature of that downtrodden people. With them it was a bow of promise, even from the time of the Druids, and their interpretation came as near the truth as that of the Greeks or Norsemen.

"Where the rainbow strikes the ground,
There the crock of gold is found."

runs one rhyme, while another legend has it that at the end of the rainbow is buried a pair of gold slippers and the one who finds them will succeed in obtaining his heart's desire. Under the rainbow the earth gives forth a sweet odor, and a prayer prayed there goes straight to the ear of God. The morning bow brings good luck, but the evening bow, the nun's girdle, brings ill luck.

In the sixteenth century the belief was common that rain passing through the rainbow blights whatever it touches. Many African tribes to this day hold the same belief and also that death will be the lot of the man who passes beneath the arch.

With the Peruvians it was the omen of good fortune, in fact was one of their gods.

In the Middle Ages the belief was common that the rainbow, with the rainbow promise, would depart from the earth forty years before the day of judgment.

The belief that a rainbow in the morning portends foul weather and in the evening fair has a foundation on fact, but it is the climatic condition that causes the bow and not the bow the weather.

This is a practical day, and rainbow lore may be discarded as trivial, yet it has also a note of sublimity. And, though the bridge of Chivnat no more rests upon mount Albordj, though Bifrost be broken and the fleet Iris speeds no more on the errands of the gods, though we seek the crock of gold and the magic slippers and find them not, though we may never pray beneath the brilliant arch or detect the pleasant odors, yet we have more than they all in the promise attached to the "bow that is in the cloud in the day of rain."

Mulberry Grove, Ill.

BIRD MIGRATION.

SOME of the birds, including many of the delicate little wood warblers, go no farther than southern New Jersey and the big swamps fringing the Delaware and Chesapeake Bays; while others, of the strong-winged species, get clear away into the far Amazon country; and our golden plover, greatest traveler of them all, stops not until it reaches far-off Patagonia.

Early in October the chimney birds gather in great flocks, and as evening approaches they can be seen circling around and around some favorite chimney in a long spiral. Some evening a week or two later they will be missing. All have risen high into the cool autumn air, and at a concerted signal have started on the long southern journey, and will be seen here no more until April showers give promise of another springtime. They have gone to the Amazon forests, and they have all gone together.

Our little bank swallows go even to the shores of the Arctic Ocean in the early summer. When they leave us in the fall they too pass out of the range of human knowledge. In April they will appear in northern

South America, moving north, but not a hint do they give of how they came there. No one knows where they spend our five winter months.

Our well-known little songster, the red-eyed vireo, winters in Guatemala. He journeys leisurely northward in the spring at the rate of about twenty miles per day for six weeks. Just about the time northern Nebraska is reached, and before any of the contiguous country to the north is occupied, red-eyed vireos are noted in southern British Columbia, 1,000 miles away. Was that 1,000 miles traveled in a single night?

A walk through the meadows in October will show the keen observer single specimens of many of the migrating birds that have been left behind when the great body of their kind has left us. The small bird's life is comparatively a short one—probably not more than six or eight years when it lives its full life span; and these single birds are the old ones, too feeble to make the long migratory flight, and abandoned by their kind to live a few short weeks on the fat of the land, and then perish miserably as cold weather comes on apace.

The routes of migration taken by birds, through the air, are nearly as well defined and as closely followed as are the roads men make on the surface of the earth. But some of them do not come back in the spring by the same route over which they traveled in the fall.

That greatest migrant of them all, the golden plover, arrives at its breeding place in the Arctic Circle in the first week in June. Some of these plovers go hundreds of miles even farther north. They make their nests in the frozen moss, where the young are reared. By the first week in August they have retreated to Labrador, where they gluttonously feed on the native berries. After a few weeks they are found on the coast of Nova Scotia, where they strike straight out to sea and take a direct course for the West Indies.

The journey is across 1,800 miles of ocean. They may not stop on the way, flying in immense flocks over the Bermudas without waiting to rest. Most of them fly at night, and possibly they may in the daytime alight on the floating seaweed to rest. After a short stop of two or three weeks in northeastern South America they again take flight and disappear, next being seen in the prairie region of Argentina, and almost to Patagonia. Here they remain from September to March. Presently they start back toward the Arctic Circle, but not by the same route whence they came. They disappear from Argentina, but are not found anywhere on the Atlantic coast. In March they appear in Guatemala and Texas, and in April they are winging their flight up the Mississippi valley. Eight thousand miles between their northern and their southern homes, and 3,000 miles apart, are the routes they take in the United States.—*R. P. Sharples, in Doylestown (Pa.) Intelligencer.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

MANY of our readers will be deeply interested in William L. Judy's discussion of a very live subject in this issue. After reading the article if any one has anything additional to add to the argument set forth by Mr. Judy, or if any one wishes to present the other side of the question we will be glad to hear from them. The question of an income tax is before the people today and now is the time to discuss it.

HAVE our readers who are interested in nature study noted the plan suggested in a recent issue for an exchange of nature study specimens? If you wish to add to your collection by exchanging specimens of which you have a surplus for those that are rare in your neighborhood, you can do so by sending us a postal card containing your name and address and stating that you wish to join the exchange.

WANT AND EXCHANGE.

It is our plan to open our Want and Exchange column to our readers free of charge. The idea is to make it a sort of helping hand. Hereafter all advertising which relates to one's business will appear in the advertising pages and the want and exchange column will be confined to matters aside from one's regular business. In it one may ask to exchange shrubs, bulbs, seeds, patchwork, books, magazines, etc. Or if one does not care for anything in return, these things or others of like nature can be offered at a low price or for nothing except the cost of carriage. Often one has an accumulation of magazines, etc., that he would gladly give to some shut-in if he knew of such a one who would care for them. Sometimes, too, one has toys that have been outgrown that would bring pleasure to other children.

Our readers will no doubt think of many other things that may be advertised in these pages to the

benefit of both parties. In a sense the column will be an expression of the degree to which our readers possess the helping spirit. Let us make it a success.

Send in your "wants" now, with your name and address, or at least your initials and full address. A postal card may tell all you have to say. Each want will be published twice.

NATIONAL FARM LAND CONGRESS.

A VERY interesting and important meeting, that of the National Farm Land Congress, was held in Chicago during the third week of November. Delegates from nearly every State in the Union were present and leading men of the country were among the speakers and helped to make the meeting a grand success as a powerful contributor to the growing interest in farm life and farm improvement.

The bills announcing the congress set forth the purpose of the meeting in these words: "By general diffusion of knowledge to educate and accurately inform the people of the entire country of the possibilities for development of all lands within the United States and the opportunities for the homeseekers to achieve independent life and fortune; to promote the movement for farm land reclamation and farm development, the settling, colonization and bringing into permanent, productive use all lands now unsettled and uncultivated or not fully cultivated; to advance farm knowledge and generally encourage agriculture and the farm home-building spirit of the American people. It will endeavor to establish means by which the homeseekers may most easily and quickly secure definite, accurate and reliable information as to the lands and opportunities, the advantages and disadvantages of any section to which he may be attracted."

We have space only to repeat a few of the many excellent things said by the various speakers and give these in order that our readers may have some idea of the nature of the meeting.

W. M. Hays, assistant secretary of agriculture, spoke of the progress that is being made by his department in its effort to produce a strain of domestic animals that are proof against diseases such as tuberculosis. "Production of cattle which will be proof against tuberculosis infection will become easily possible to even an inexperienced farmer," declared Mr. Hays. "A start in the use of public expenditures in aiding and directing scientific breeding of domestic animals already has illustrated that co-operation with the view of stamping out tuberculosis-infected cattle can be accomplished, and within a few years at the most. As proof that we are on the road to success in the undertaking I may point to the recent accomplishments of the department and the institutions with which it is affiliated regarding the production of plants resistant to diseases which previously made the grow-

ing of the parent stocks impracticable. Disease-resistant cow-peas, cottons, cantaloupes, flax and varieties of cereal grains have been produced."

Mr. Hays spoke further of the progress agriculturally that has been made in the United States and said that we ought to send instructors in agriculture to the ends of the earth. "The sooner the inefficients of the world are educated to our standard of home-making, the sooner the harsh, economic conditions that make for war will have been removed," he said.

R. E. Dowdell, of South Dakota, aroused no small stir by his advocacy of a graduated land tax. His speech on the subject was all the more surprising in view of the fact that he owns 12,000 acres of land near Artesian, S. Dak. Under the system he proposed the owner of huge tracts such as his would be compelled to pay more taxes per acre than smaller holders. "I own 12,000 acres," said he, "and I admit that it is a sad state of affairs under which any government will permit me to hold that much without paying a tax in proportion to the amount I possess." "Landlord" Dowdell was backed from the onset by a militant delegation hailing from the rapidly developing Northwest, all of whom emphatically were in support of the measure, which, it was contended, offered practically the only legal solution of the problems that have arisen because of "land hogging" by speculators.

On the next to the last day of the meeting Senator Borah, of Idaho, delivered the principal address. This is how he expressed himself on several questions concerning farm life and progress:

"The farmer today is the most potential factor in the whole economic life of the nation. No more important phase of our industrial life has been up for consideration than the exodus of the last thirty years from the farm to the city. This government would not last for a decade if that seething mass of political corruption lately exposed to public gaze in a great metropolis did not find its antidote and disinfectant in the healthy, patriotic life of the farming communities and the business men of the agricultural village, the smaller towns and cities.

"It is estimated that not less than 70,000 will seek homes in Canada, who will take with them not less than seventy or a hundred million dollars in cash and effects. The money or its equivalent which they take I do not so much deplore, but they are the best of our citizens, men whom we can ill afford to spare. This is at a time when there are untaken millions of acres of the richest American soil that ever blossomed into prosperity, needing only that water be put upon it.

"The nation which is spending its millions for war ships and will not find homes upon the public domain for its home-hungry people is untrue to the great principles upon which is founded a republic in fact. Public men who stand in the way of wise and speedy ac-

tion in such a cause may be friends of some who seek the favors of national legislation, but they are not the friends of the home-builder or of the people."

On the last day of the congress, L. C. Irvine, of Mobile, Ala., gave a jolt to the supporters of the slogan, "Back to the Soil," adopted in an early session. Mr. Irvine's subject was "The Problem of Content with Our Environment." He indulged in his little side thrusts at the orators of the previous days not, as he said, because he was not in sympathy with the "back to the soil" movement, but because the movement, as now being carried out, shows a tendency to bring hardships to many people who have followed advice that was given in bursts of oratorical enthusiasm to learn later that they lacked the knowledge and equipment to operate a farm successfully.

"It isn't my idea to be a knocker or to stand before you as a pessimist," he said. "Anyone knows that the future of this nation depends more upon its development agriculturally than upon any other manner of strengthening and fortifying. But I do not take kindly to the oratorical 'blue print' farmer who shouts his words from the public platform and who is as guilty, in my opinion, of exploiting American citizens through the agency of sensational farming promises as is the 'wild cat' speculator who sells 'salted' mines with no thought save of his bank account. The men who are planning to locate on farms are the very best citizens we can possibly get. Tell them the truth. Be enthusiastic as much as you please so long as you keep within the truth."

Gifford Pinchot, national forester of the United States, was down for an address, but was not able to meet the date. However, he addressed a letter to the congress, from which we quote these paragraphs:

"The movement of this congress has my warmest sympathy. In view of future considerations concerning our future food supply there can be few patriotic duties more important than to promote the development and proper handling of all the farm lands of the United States.

"The stability of our national life rests in no small degree on the people who live in the country. As I have said elsewhere, the most valuable citizen is the man who owns the land from which he makes his living.

"The best product of any country is the men and women who are born and trained there. The contribution of the farm is not merely a contribution in food supply. That is important and will become increasingly so. But the contribution the farm gives to the town is vigorous, right-minded, clear-headed men and women."

After the reading of Mr. Pinchot's letter, Alva Adams, former governor of Colorado, spoke. "Back to

(Continued on Page 1224.)

THE HOME WORLD

THE GREAT FRAUD OF OUR COUNTRY

O. G. BRUBAKER, M. D.

If Mr. X were in the market to buy a horse he would be extremely careful and watchful that he got just the kind of horse represented. He would even question the intelligence and veracity of his closest friend in the matter of a horse trade, for to be cheated would not only cause Mr. X to be open to ridicule but it would lose him some money. But if Mr. X were in the market for some kind of relief or cure for a pain or disease, he wouldn't use an ounce of investigation—a newspaper ad. or the word of most anyone would be all the recommendation he would need to cause him to take into his stomach most any kind of dope. A wise man is this Mr. X. He is so typically American. He takes a world of precaution in buying a horse but no sense is used at all in buying medicine. He belongs to that class of Americans who spend every year millions of dollars in patent medicine, most of which is *water, alcohol, opium and narcotics*.

The other morning Mr. X got out of bed with a pain in his head and a distressed feeling in his stomach. He happened to pick up a paper with a glowing advertisement of "*Peruna*" in it. In this article he finds his symptoms described exactly and a little farther on in his reading he reads that "*Pe-ru-na*" is a sure cure for catarrh and indigestion. Of course, he must have a bottle of "*Peruna*." Just at this moment Mrs. X remembers that she has been suffering for several days with a lameness in the back and remembering that her friend-down the road had been so miraculously cured of kidney trouble (all backaches do not mean kidney trouble) by taking "*Swamp Root*" she has her husband buy a bottle of "*Swamp Root*" for herself and a bottle of "*Paine's Celery Compound*" for her daughter Ethel, who is so irritable and nervous.

Although Mr. X is feeling quite bad, he puts his old, gray mare to the spring wagon and goes off to town to get the wonderful "*cure-alls*." On the way to the city he meets a neighbor or two who are also ail-

ing. Mr. Jones is all worn out, has no appetite, can not sleep at night, and is pale and sallow, so he needs a tonic and has Mr. X bring a bottle of "*Hostetter's Bitters*." Mrs. Smith on down the road has been having so much trouble with her nerves. She "*flies all to pieces*," over the most trifling thing, rolls and tumbles all night instead of sleeping, and having read in her paper what a wonderful thing "*Dr. Miles' Nervine*" has done for some lady over in New York (most likely some poor unfortunate who has been paid to write the testimonial and may have never seen "*Nervine*"), she needs a bottle.

Now, when Mr. X has delivered his goods, what have they got? First of all are the wrapper and circulars printed full of testimonials and proofs of most wonderful cures, pictures of senators, ministers, farmers, lawyers and doctors—all endorsing these wonderful discoveries. All the victims above described begin to feel better already, and when they begin to take the medicine they feel new life, and the pains, distresses and aches fade away like magic—what a wonderful relief! If they had not been so elated and had read more carefully, each of these five *wise* Americans would have found that either one of these medicines would have cured all the others. For example, according to the advertisements, "*Peruna*" would cure Mrs. X just as well as "*Swamp Root*," and "*Swamp Root*" would have been just as good for Mrs. Smith as "*Nervine*." There are two things that all five of these typical American people got and which every one gets when he buys patent medicine—they got a generous portion of alcohol and they all got "*stung*," for all of these medicines contain alcohol and not one would cost over twenty-five cents to manufacture. Twenty-five per cent of "*Peruna*" is alcohol, forty-four and three-tenths per cent of "*Hostetter's Bitters*" is alcohol and twenty-one per cent of "*Paine's Celery Compound*" is alcohol.

It has been claimed on the very best statistical authority that more alcohol is consumed in this country in patent medicines than is dispensed in a legal way by liquor venders. Yet ministers and temperance workers consume a lot of patent dope. I know of drunkards who, being unable to buy beer and whiskey, take "Peruna" and other patent medicines to satisfy their depraved appetites. There can be only one reason why "Peruna" and other dope of its class have met with such a wonderful sale. The name of that reason is alcohol.

While I have mentioned five so-called patent medicines, hundreds of others could have just as truthfully been used as examples. While there may be some splendid preparations on the market and no doubt many people have been benefited by the use of some of them, the fact remains that by far the greater number of them are worse than useless and are made simply to sell to the ever-ready buyer. And it is also a fact that nearly all (better say *all*) of the patent medicines which are said to "purify the blood," give "vigor and strength" to the patient, are rich in their alcoholic content, and it is the alcohol which produces the stimulating effect that the patient gets and which sooner or later takes him to his physician for help. You pay one dollar per bottle for nearly all these remedies and you could make them yourself for about twenty cents per bottle. "Peruna," for example, costs a little less than eighteen cents to manufacture. No wonder the "Peruna" firm is wealthy. "Take half a pint of cologne spirits, 190 proof (alcohol) with a pint and a half of water, adding thereto a little cubebs for flavor, a little burnt sugar for "color" and you have "Peruna," pure and simple. On just some such cheap formula as this you will find all patent medicines made. Now the next time you make a speech against the beer and whiskey drinkers be sure you have not drunk more alcohol than they have. For alcohol is alcohol whether you buy it at the saloon or the drugstore—whether it is in the form of *beer, whiskey, and gin* or whether it is in "Peruna," "Sarsaparilla," or "Celery Compound." Now, in the name of the temperance movement, if you must drink alcohol, do so "above the counter." Don't be a "back door" drinker.

A man in search for "Peruna" testimonials was directed by a druggist to call upon a certain farmer in the neighborhood. The farmer gave "Peruna" a most glowing "send-off." He had used it for months and could say it did wonderful things, etc. The agent counted the number of empty "Peruna" bottles. There were twenty-four. The druggist added his testimonial that the old man had a "still" on all the time since he began taking "Peruna" and that he was his best customer. Needless to say the druggist's testimonial was not printed. And why not?

This brings me to the point of the testimonial. If all the testimonials of a patent remedy were printed it

would soon put it out of commission. For if you could know the injury that is done to the human system and could know the untold numbers of drunkards who are made and persist in their drunkenness by the traffic of this great fraud, you would be as much against the average patent and proprietary medicine firms as you are against the saloon. You will see pictures of so-called noted divines who have written long testimonials of "Duffy's Malt Whiskey" as well as of other articles of a similar nature. You will find on investigation that ninety-nine per cent of the noted (?) divines who write "ads" for patent medicine firms are dummies and fakes; *e. g.*, Rev. W. N. Dunham and Rev. Mcleod.

For your enlightenment here are the names of some of the leading remedies with their alcoholic content:

"Lydia E. Pinkham's Favorite Prescription" contains twenty per cent alcohol; "Hood's Sarsaparilla," eighteen per cent alcohol; "Burdock Blood Bitters," twenty-five per cent alcohol; "Ayer's Sarsaparilla," twenty-six per cent alcohol; "Paine's Celery Compound," twenty-one per cent alcohol. (The next time your wife is asked to write directly to Mrs. Lydia Pinkham, remind her that Mrs. Pinkham has been dead over twenty years and that her questions are answered by a *man* employe of the firm.)

Not only do these fraudulent remedies contain alcohol, but a great many contain highly poisonous drugs. Up to the end of the year 1903 there had been twenty-five deaths authentically reported as caused by acetanilid. All of these cases were people who had done their own prescribing and took the drug in the form of a headache powder or pain reliever without consulting a physician. Among the "sure cures," "ready reliefs," and "anti-pains" that are on the market and which contain acetanilid, may be mentioned "Orangeine Powders," "Koehler's Powders," "Royal Pain Powders," "Bromo-seltzer," "Anti-headache" "Megrimine," "*Antikamnia*" and "Cephalgin," and a host of other drugstore-vended headache cures and anti-pain remedies. Be sure your heart and kidneys are normal before you take dope of this kind. Make the druggist tell you what it contains. He is responsible and has no license to sign your death certificate if it kills you. "On October 9, Detective W. H. Hawkins, a man of powerful physique, went into a drugstore in Anderson, Indiana, and took a dose of 'Dr. Davis' Headache Powders.' Shortly afterward he fell dead on a car on his way to Marion." The coroner's verdict was that he came to his death as a result of the poisonous effect of the drug. A few years ago a young lady of Philadelphia took the prescribed dose of "Orangeine Powders" and within three hours she was dead. The next time you tell your friend to take a headache pill, tablet or powder be sure you know his condition, or be sure the drug contains no poisonous dope, for you may be prescribing his death warrant.

You have no right morally or legally to give your medicine to any one else unless the doctor says so. It is dangerous. There are so many frauds and evils perpetrated under the catchy name of "sure cure and relief" that one could go on writing page after page, but I trust there has been enough said to cause the reader to think along this line. And if you will do a little sound thinking you will be convinced that a remedy that claims to cure every ailment and diseased condition, make new blood, restore lost vitality, etc., etc., is made because there is a big profit in it and that it is the greatest fraud the American citizen has to deal with.

If I cared nothing for the credulity and respect of my fellow-men, if I cared nothing for my own honesty and respect and wanted to fill my pockets with the hard-earned dollars of the American people, I would take a little quinine, a few ounces of hydrochloric acid, and several barrels of rain water (lake water would be better). I would mix these together and bottle the mixture into twelve-ounce bottles. I would call my "discovery" "Radio-aqua" and direct a tablespoonful before each meal and at bedtime. I would advertise this "wonderful mixture" far and wide, as a sure cure for cancer, since it contains the most wonderful and mysterious element known to science, radium. For proof that it contains radium I would direct the patient to hold the bottle up to the sunlight and look at the beautiful light blue tint of radium in the liquid. And how the poor, benighted cancer patients would buy the preparation! I wouldn't stop with cancer, for radium will cure (?) eczema, headache, catarrh, lumbago, dyspepsia, etc., etc. In fact, I would have a "cure-all" far better than most on the market, for it would do absolutely no harm and there would be enough quinine in it to increase the appetite and enough hydrochloric acid to aid the digestion. While this seems very ridiculous, this is a very fair sample of the way most patent medicines are made. In fact, I got my idea of the above mixture from the dope that that great cancer fakir of St. Louis used to advertise.

HOME.

ROSA MAY MILLER.

"The dearest spot on earth to me
Is home, sweet home."

WEBSTER defines home as a dwelling place, or abode. How hollow and insignificant the definition sounds to a true lover of home!

HOME! A name that causes a vibration of every chord of the human heart; a name that thrills the very soul; a name that brings forward all the goodness, purity, and sweetness of one's nature.

Life is made up of prose and poetry. The cares, trials, and hardships, the nerve-racking business part of life that is essential to the maintenance of loved

ones, constitute the prose, and weary one becomes of constant prose. The poetry of life is made of smiles, though they be through tears, happy faces, dancing childish feet, music, be it of the brook, the birds, an instrument, or the merry whistling of the schoolboy.

"Home," some one has said, "is a paradise of children."

Paradise—an abode of perfect purity and peace. And, surely to childish hearts, home is a paradise.

And what may constitute a home?

The first essential feature of a home is a loving husband and wife. Surely one may class these two as one, for if they work not in unity and harmony, a chasm is formed, and by its slowly widening, destroys the true beauty and sweetness of the home.

One other feature of the home should be mentioned, and that is the child-life part of the home: the part that increases and emphasizes its true value.

Cynical people maintain that the upholders of home view it through rose-hued glasses. If this be the case, it is sad that they do not use glasses of like hue.

But home is not an illusion, it is a reality, wherein love dwells in all her purity and truth.

The perfect type of home, is heaven, a home of joy and peace, free from trials and vexations.

"There is beauty all around,
When there's love at home:
There is joy in every sound,
When there's love at home."

THE RELATION BETWEEN CHRISTMAS FEASTING AND NEW MOUNDS IN THE GRAVEYARD.

DR. EVANS, health commissioner of the city of Chicago, warns against overeating at Christmas dinners. He points out that the death rate among children between December 24 and January 5 is always higher than at any other period of the year. This comes of the extra allowance of meat, rich sauces, cake, pie, plum pudding, etc. Combine this with the overheated, close rooms, and these together constitute an invitation for the disease germs to set up business.

Dr. Evans pleads for Christmas table temperance and obedience to the laws of digestion. Doctors generally have their picnic the day *after* the people have had theirs.

Why not institute a reform this year? Eat simple meals during the holidays, imbibe the true Christmas spirit, help to make others happy instead of overloading your own stomach, filling your system with toxins so that you will be compelled to send for the doctor at the very time when humanity should be blessed by your genial presence.—*The Lifeboat*.

WORK well planned can be accomplished in far less time than when taken up haphazard.

The Children's Corner

THE FINDING OF JANIE.

JENNIE TAYLOR.

THE sky was gray. Rain—long slanting lines of rain had been falling. Toward the close of day, the rain changed to sleet and snow.

It was Saturday night. In the gathering darkness, a little girl, alone and poorly clothed, was hurrying homeward. Her faded dress and tangled hair were protected only by a thin piece of shawl. The worn shoes failed to keep out the cold and wet from the suffering feet.

Janie Brown was an orphan. Granny Glines, who kept her, did the best she could for her but that was very little.

Sometimes Granny was tired and ill. Then she was cross to Janie and grumbled a great deal. Finally she told the child that she could not keep her any longer if she kept going to the mission class all the time instead of helping her.

The next day was Sunday. If Janie had waited she could have seen the lovely lady who had first invited her to the mission. But Janie could not wait. She had decided to find her friend's house and leave word that she could not come to class any more because Granny was angry and did not wish it; that she must stay and help the woman who had given her a home. But Janie did not know just where her good friend lived, and in trying to find her became lost.

The truth was, Granny Glines liked Janie well enough, but she was so very poor and alone herself that she could not do very much for the child. So the thoughts of her trouble sent Janie on her urgent errand.

Only a few weeks before the day that Janie was lost, Mrs. Joyce, the lady who had given Granny Glines work to do, made friends with Janie and invited her to attend the mission on the corner. Mrs. Joyce was a teacher there. She was also one of a committee to find new pupils, and said she would look for Janie there each Sabbath.

Janie went. She liked the music, the flowers, the happy faces, the warmth of welcome. The little church room was a very good place, she thought. But more than all she liked Mrs. Joyce who had made it possible for her to come, and who had taught her many helpful truths from a wonderful book they called the Bible.

Already the child was catching a gleam of hope for her future, and dreaming dreams that some day should come true.

She would learn to be a good and useful woman, and a great lady, too. She would be kind and do many

things to teach other little folks to be good and happy.

But on that stormy night Janie thought her hopes were all blighted. She could no longer go to the mission and meet her friend, nor hear the music, nor learn any more of those wonderful lessons. Then, too, she was lost; lost in the darkness and storm on a strange street. Inside the houses, bright lights were shining.

The night grew colder. She wished that she might go into the nearest house and stay just long enough to get warm but she dared not. Drawing her threadbare shawl closer about her, Janie crept into the shadow of the porch. Since she could not find her friend, she would rest there one moment, then hurry on to her rooms with Granny.

Some one must have heard her step on the porch, for no sooner had she reached a sheltered spot than the door was opened and a bright light streamed out upon her. "Why, Mary, what is this?" asked a man's voice. A lady came to the door. It was Mrs. Joyce. She recognized instantly the big brown eyes that peeped out shyly from the shawl.

"Why, Jack, that is Janie Brown."

Janie's heart jumped for joy. She was at the very place she had been trying all evening to find.

"I came to tell you that I cannot come to the mission any more. Granny is sick. She needs me. Now I must be going. And Jane began to cry as she turned to go, for she had not quite found herself yet.

"Stop, little girl, wait a minute!" called Mrs. Joyce. "Jack, let's take Janie home. Then I can see Mrs. Glines myself."

"What will happen next?" wondered Janie, glad that she was no longer lost, yet frightened at the thought of what Granny might say.

While the cold and hungry child was being warmed and fed by her friend, preparations were being made to visit Mrs. Glines. A basket was filled with dainty food, and with it a bundle of comfortable clothing was tucked away in the carriage. Soon Janie was rolling along the paved street homeward. To her it was like a dream from which she dreaded to waken.

But the awakening was not rude as she had expected. Granny and Mrs. Joyce held a quiet conversation. Somehow after that night Janie and Granny never had any more of those awful struggles with poverty. Other ladies called at the old brown house. They brought Granny work that she could do without overtaxing her strength. Janie not only kept her place in the mission class but was sent to a good school besides.

Becoming lost that time proved a great event in Janie's career. Her hope of discovering a good and useful work in life was realized at once and that work kept her busy and contented, so Janie was found indeed.

Tipton, Iowa.

THE QUIET HOUR

LOST IN THE WILDERNESS AGAIN.

IRA P. DEAN.

"YES, I often think of those poor Children of Israel, lost out there in the wilderness; but then it was their own fault. I can't sympathize with them very much because they were too ignorant to do what they were told; they had no business to disobey Moses and be all the time casting up about back in Egypt and wishing they were back there again; then too why didn't they let idols alone? Of course they weren't as smart as people are these days."

Say, brother, don't be too severe; perhaps you haven't gotten out of the wilderness yet, with all your being smarter than the Children of Israel.

What are the churches and Sunday schools having so many conventions for? I notice this on nearly every program: "Ways and Means to Get and Keep People in the Sunday School," and other similar topics. Let us see how much better we are now than the Children of Israel were in their time. God promised to deliver them. The very same God promises to deliver us. God sent Moses to be their deliverer. The same God sent Jesus Christ to be our Deliverer. Moses knew the way and it was their business to follow him; Jesus knew the way and went it, and are we following him? More than that, Jesus *is the Way*. If Jesus is THE WAY, why are we hunting a way to interest people in their souls? Moses knew the way and the people didn't believe it and tried to find some other way. Jesus *is the Way* and yet the churches today are spending time and money trying to find a way to interest the people.

"Yes, but the Children of Israel had no business to worship an idol." Well, the churches today are worshipping money, fancy churches, pipe organs, euchre parties, and you know some other idols too that they are worshipping today. "Yes, but the Children of Israel were contemptible; they wished they were back in Egypt." Listen, my brother: Did you ever hear any one say, "I wish we had prayer meetings like we used to have long ago; the meetings today are nothing compared with those when I was young"? What are they doing? Simply saying that it is worse now than before, wishing to go back instead of forward. If the meetings today are not better than they were years ago, something is dangerously wrong. We are to grow

in grace, to advance, to improve and if the meetings of long ago were better than they are now the church is in a very dangerous condition.

No wonder then the topics are being discussed as to "How to Get and Hold the Young Folks," "New Methods of Interesting the Young," etc. We are lost in the wilderness of doubt, in the wilderness of discontent, seeking a way out while Jesus Christ stands up and calls, "I AM THE WAY, the truth and the life. No man cometh unto the Father but BY ME." And yet the churches are hunting a way to bring people to Christ. The schemes and plans that are introduced only tend to get us tangled up more in the wilderness. There is but one way out and Jesus Christ is that Way. There was but one way out for the Children of Israel and Moses knew that way. However good the newly introduced methods may seem, they are unnecessary, as Jesus himself only is THE WAY, and if we can't be successful that way we will die in the wilderness.

The Children of Israel adopted the idol worship, perhaps thinking it would hold the interest of the people, but they didn't get out of the wilderness by it. Some churches have adopted the euchre party, festival, picnic, dance and poolroom method to interest the people, but they are not getting out of the wilderness and while they are experimenting and speculating in new ways and means, they could be worshipping God in the real way, in the way Christ taught and then you would not hear people wish for the old-time meeting. Some churches give rewards and gifts to those who attend regularly, etc. Who started that method? Did Christ? If not, it is not Christ's way. How did Christ interest the people, by offering presents for the best attendance? If the Christians today would live more like Christ, would be more enthusiastic, more sincere, the church would be such an interesting place the people would find a pleasure in being there, not because they get a reward; but because they get a blessing.

If we are not careful along this line people will place a greater value on the rewards they receive than on the Bible and the cause of Christ. It is a serious matter. We must get out of the wilderness before we can get to heaven and since Jesus is the only Way let us adopt the plan of following that Way.

Harrisburg, Pa.

HOW TO OVERCOME THE LACK OF REVERENCE FOR GOD'S HOUSE.

THAT there is a great lack of reverence for God's house extant becomes apparent to every observant person, no matter where one may attend any religious gathering, be it Young People's meeting, Sunday-school sessions, prayer meeting, or church services. Even Christians seem to forget that he who is the same yesterday, today and forever, is still burning with quenchless zeal for the purging of his Father's house, and are doing a great deal toward making it a den of thieves instead of a house of prayer.

This lack of reverence manifests itself in various ways, conversing about anything and everything except the things of Christ while entering and leaving the house of God, defacing the furniture, inattention to the preaching and reading of the Word, whispering and giggling during the service; especially is this so of the younger people and the so-called back-seat Christians.

I do not wish to say, however, that every Christian that sits on the back seat is a back-seat Christian, far from it. There are busy mothers that have slipped away from household cares at the last moment; there are humble, unfashionable worshipers, too much strangers to go far forward, yet not liking to stay away, who are as near to God in the back seat as if they were next to the speaker's desk. But the fact remains that the man who habitually chooses the back seat in the Lord's house expresses thereby the inward desire of his soul; he wants to follow Christ—afar off. But for all existing conditions there must be some causes. Why, then, such a lack of reverence for God's house? And how to overcome it? The best way to overcome any evil is to remove the cause as far as possible.

One reason, and perhaps the chief reason for lack of reverence for God's house is lack of love for God himself, which is a result of our perverseness by nature and self will. The remedy for this lack of reverence is a thorough consecration to God and love and reverence for his house will be the natural consequence; for no place fills the child of God with awe and reverence as God's house. Here it is the child of God finds refreshment and blessing for its soul. The promises are many which give assurance that God reveals himself in his sanctuary. He is everywhere, but nowhere is he so near his children as in the place where his name is recorded. There he has covenanted to meet with his people and to reveal himself in their midst. Since the days of the tabernacle in the wilderness the place where God is worshipped has been a potent factor in the individual life of the child of God and as a child loves its home so should the whole being, soul, heart and flesh yearn for the courts of the Father's house. Every Christian should possess a spirit like the Psalm-

ist when he says, "One thing have I desired of the Lord, that will I seek after; that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to enquire in his temple," also, "For a day in thy courts is better than a thousand. I had rather be a doorkeeper in the house of my God, than to dwell in the tents of wickedness."

However there may be some earnest Christians who lack the attitude of reverence for God's house merely through thoughtlessness or who find it very hard to acquire an attitude of reverence which may come from habits formed during childhood or youth. Such should never in attending divine services speak or think of it as only going to church or preaching service but as a meeting with God or acquiring the habit of self-communion, and everything else will follow. Spend some time every day in the silence of your own chamber talking to your soul about the great concerns of life, and it will not be long before you will have the consciousness of God's presence.

If, then, some Christians lack the attitude of reverence for God's house from habits formed in childhood, how may such habits be prevented from being formed? That is where the work of the home and Sunday school comes in. To the sorrow of many children parental religious training is neglected or entirely omitted. The family altar, the daily reading of God's Word, and family prayer, followed by parental admonitions and instructions are unknown and the consequences are pride, indifference, disregard for parental authority, irreverence. And so the little child without any training goes generally unaccompanied by parents into the Sunday school, properly into the primary department where the teacher is trying to cope with the latest method of teaching the little people. Yes, we must try to impress the truths upon their minds in just as pleasant a way as possible, we must not restrain or rebuke them lest we irritate them and so destroy the mental conditions to receive the lessons we would teach. The result is very often confusion, disorder, disrespect for the Sunday-school room, which is only a part of God's house. If a child with such habits goes into the higher grades of the Sabbath school it requires a tactful, conscientious, prayerful teacher to impress him reverence for God's house.

As already said reverence can not be taught altogether. It is a condition which comes from within, an outgrowth of our spiritual life. But a great deal can be done by the Sunday school to prevent the appearance of lack of reverence for God's house where the home fails to do its part. Make the sessions for the little people in Sunday school even shorter if needs be but hold them responsible for their behavior. Even children should be made to feel that the Lord is in his holy temple and that all the earth should keep silence before him.—*The Mennonite*.

ECHOES FROM EVERYWHERE

The Chicago City council has recently passed an ordinance requiring that in cases of a delay of over ten minutes on surface or elevated lines, fares must be refunded to the passengers.

What is said to be the largest belt in the world has just been completed. It is 240 feet long and 6 feet wide; it has three-ply thickness, and the cost was \$5,800; 540 hides were used in the construction.

One hundred thousand dollars is offered by a Yale alumnus as a prize for a positive cure for tuberculosis. The interest on the \$100,000, which is to be held in trust, is to be used in testing the cures. To win the prize the cure must have been in effect five years and must prove its efficacy in that time.

In an address before the American Civic Association, Mr. Herbert M. Wilson, chief engineer in the United States Geological Survey, places the annual damage and waste by smoke in the United States at \$500,000,000 in the large cities alone, or about \$6 to each man, woman, and child of the population.

Laymen as well as clergymen of Ontario, Canada, are backing a movement to have bookmaking on horse-racing made unlawful. During a day's racing at Woodbine \$1,000,000 was placed in the hands of American bookmakers as bets. A bill to prevent racetrack gambling is in the hands of a committee of parliament.

Congress is to be asked to establish a coal commission and to adopt a plan for making the price of coal uniform in all parts of the country. The plan has been formulated by coal operators and is to be brought to the attention of the President and Congress following a big meeting of coal operators in Pittsburgh the latter part of the month.

John Mitchell, Vice President of the American Federation of Labor, thinks strikes are safer than football. He told the sociological conference of the Presbyterian board of home missions that more football players than disputants in labor troubles were killed every year and that election-brawls cause more injuries and arrests than strikes do.

Cottonseed oil mills in Louisiana, Mississippi, Texas and other southern States are closing their doors because cottonseed has reached the highest price in the history of the business. The outlook is that prices will go still higher. The cottonseed output this year is from 10 to 15 per cent less than last year. The demand for the by-products is said by experts to have increased more than 50 per cent. The effect of the high priced seed is shown in the price of crude oil, which has increased to 44½ cents a gallon from 31 cents at this time last year.

A summary of the accidents which occurred during the hunting season published in Chicago Dec. 1 shows that 86 persons were killed and 67 injured in the United States and Canada. This is an increase of 20 killed over the year 1908 and 5 over 1907. Many of the accidents were caused by careless hunters mistaking men for deer and shooting them down.

The Western Passenger Association has notified the commercial associations of large cities of the country that no more reduced rates will be granted for merchants' meetings. All reduced rates for conventions, State fairs and other meetings are to be done away with and no reductions in fares are to be made except possibly for colonists, homeseekers and summer tourists.

On the return of Charles F. Murphy, leader of Tammany Hall, to New York City it was thought he would confer with Judge William J. Gaynor, mayor-elect, in reference to appointments. Judge Gaynor, hearing of the rumors, promptly announced that he was under no obligations to the "bosses" and would do his own appointing. Murphy says he has not and does not intend to confer with the mayor-elect.

Little progress is expected along the line of establishing a parcels post during the present session of Congress. President Taft will lend no encouragement and Postmaster General Hitchcock is lukewarm. It is proposed to first put up a fight for a postal savings bank. As a substitute for a parcels post, Postmaster General Hitchcock will recommend, as an experiment, the establishment of a "rural packet post" in several counties in several States.

King Gustave of Sweden recently inaugurated a new departure for sovereigns. Disguised as a stevedore, he spent most of a day carrying sacks of coal from a lighter. In an interview after it was all over the king said that this was only the beginning. He intended to mix with all classes of laborers, so that he might ascertain their opinions and wishes. Already, he added, he had obtained many valuable hints from the men with whom he worked.

State's Attorney Ecker of Bureau County has appealed to the Chicago police to assist in apprehending Alex. Rosenjack and Robert Deans, the two men alleged to have been directly responsible for the burning of the St. Paul coal mine and the deaths of 310 miners. Rosenjack fled from Cherry after his life had been threatened and Deans is said by Coroner Maim to have been kidnapped by unknown persons. Evidence tending to show that the management of the mine had no system by which it could know the number and identity of men working in the mine was supplied by the testimony of Martin Powers, a checker and weigher. He testified the number of men in the mine was guessed at by the cage men.

Constitutional prohibition was defeated in Alabama by a majority of about 20,000. All of the large counties gave decided majorities against prohibition, including Jefferson County, the home of Gov. Comer and Fred M. Jackson, State chairman of the anti-amendments. Much feeling was felt against the governor and legislature. Alabama had the strongest anti-liquor laws of any State and the people were opposed to constitutional prohibition until statutory prohibition had been fairly tried.

Rev. Dr. Daniel Ayres Goodsell, resident bishop of the Methodist Episcopal Church, died at his home in New York Dec. 5. He had been ill several weeks. Dr. Goodsell was born at Newburg, N. Y., in 1840, and entered the ministry in 1859. From 1880 to 1888 he was literary editor of the *Christian Advocate*. In the latter year he was elected bishop by the general conference and three years ago was appointed resident bishop of New York City to succeed the late Bishop Fowler. He celebrated the fiftieth anniversary of his ordination to the ministry last year.

For the purpose of testing the constitutionality of the federal employers' liability act of October, 1908, counsel for the New York, New Haven and Hartford Railroad have announced their intention of bringing to the United States Supreme Court the case in which the widow of Daniel J. Walsh of New London, Conn., was awarded \$5,500 by the United States Circuit Court. Walsh was killed while acting as inspector for the railroad. As a ground for their attack on its constitutionality counsel assert that the act assumes to control relations between employer and employé, while under the Constitution Congress has the power merely to regulate traffic between States.

A physician who has made a careful study of the effect of roller skating has shown that excessive indulgence in this sport frequently results in flat feet, defective development of the leg muscles, and impairment of the gait and carriage of the body. Roller skating is especially injurious to growing children, whose muscles, bones, and joints are still in process of development. The muscles used in walking, especially those in the feet, remain inactive in roller skating, while other muscles are overworked. Hence the body becomes more or less deformed, especially in the case of young girls, who fail to acquire their normal grace and beauty of form.

Dec. 5 one hundred thousand people packed Trafalgar Square and the adjoining streets for several blocks in six simultaneous mass meetings called to denounce the house of lords for its rejection of the budget. The scene was unique in England's political history. The most significant fact of the protest was that the Liberals and Socialists were about equally prominent, indicating perfect coöperation. The speakers at each of the meetings presented the same resolution: "That the rejection of the budget was a menace to the people's hard won liberties, demonstrating the necessity of the abolition of the house of lords' power to veto the popular will of the people." Everywhere the resolutions were carried amid the wildest enthusiasm.

President Taft has made public an executive order which provides for the putting of appointments in the diplomatic service of the United States upon a merit basis, in which politics shall play no part. The order, which is issued under the civil service act, provides for examinations for embassy clerks and the keeping of an

eligibility list from which promotions in the State Department shall be made. The Secretary of State is directed to report from time to time to the President, along with his recommendations, the names of those secretaries of the higher grades in the diplomatic service who, by efficient service, have demonstrated special capacity for promotion to the chiefs of missions. In order that this may be successfully accomplished the President orders that a careful efficiency record be kept of every officer of the diplomatic service.

Designs for the new postal cards to be issued by the government have been approved by Postmaster General Hitchcock. The cards will be furnished by the government printing office, in accordance with a contract effective on January 1, 1910. On the ordinary card the head of President McKinley will appear, as now, but a much better likeness has been selected. On the new small card, intended for index purposes and for social correspondence, a likeness of President Lincoln will appear. The 2-cent international card will bear a portrait of President Grant. An innovation has been made for the double, or reply, postal card. On the first half will appear a portrait of George Washington, while the stamp on the second, or reply, half will be a likeness of Martha Washington. The borders of the stamps on all the cards will be diversified in design.

In Europe apple, pear, and other trees are trained in espaliers on the south side of the wall where they get the full benefit of the sun and luxuriate there. But the north side of the same wall is practically useless for the same purpose, as the rays of the sun are cut off from it. Recently a number of experiments have been tried with glass walls which permit the passage of the sun's rays through to trees on the other side. The results show that pears which grew on the trees on the north side were almost as heavy as those growing on the south side and were smoother than those on the south side. The difference in temperature between the two sides of the wall is not very great, as the southern face reflects less heat and is therefore cooler than that of a masonry wall, while the northern side is warmed by the rays which pass through. Theoretically the masonry wall has one advantage over the glass wall, for it absorbs more heat during the day, and consequently gives off more at night. The cost for building the glass wall is about the same as that for building the masonry wall.

The lure of the white light by the wayside of railroads will no longer be held responsible for railroad wrecks. The white light as a signal for a clear track is to go. Dec. 15 the yellow light will be substituted for the white light on the Pittsburg and Lake Erie Road of the New York Central system. The entire Central system is preparing to adopt the plan all over the system at as early a date as the changes can be made. Engineers of fast trains have often been confused by white lights in dwellings and other places along the road, and have passed colored lights which were set. Accidents resulted when the set lights were passed. Roads throughout the country have agreed to the change.

Upon recommendation of the secretary of agriculture, Secretary Ballinger has withdrawn from all forms of disposition, except under the mineral laws, approximately 118,611 acres. This land is to be added to the Plumas national forest in California. About 10,000 acres of the area withdrawn are embraced within timber and stone entries.

Among the Magazines

BUSINESS MEN WANT PEACE.*

We want peace, first because we are men and are moved by the humanitarian instinct that rebels against the cruel butcheries of war, and, secondly, because our business is bound to be seriously injured by the interruption of the friendly relations between nations.

There is no need to go into other reasons; these seem sufficient. It has been said that some business men want war because it creates a demand for their products, such as guns, powder, foodstuffs, uniforms, etc. This is absolutely untrue of business men, though there may be a few abnormal beings who would willingly see their brothers slaughtered in order to add to their own commercial profits. Business men all want peace. Why are they, then, not more active in the peace movements of the world? The teachers, the preachers and other professional men have, in the main, carried the burden of peace efforts thus far. They have been the seers and the prophets. There are two principal reasons for this seeming apathy of the men of business: First, they have not looked upon these peace movements as practical in their methods; they have not appreciated the possibility of early realization of the hopes of peace so freely expressed. Secondly, business men have been so engrossed in their own affairs that they have, as a rule, neglected not only their opportunity, but their duty, to coöperate in this greatest cause on earth, in which, as before said, their humanitarian, as well as their selfish, interests, are so vitally involved.

What is there to warrant the men of business to change their view of the impracticability of the peace movement and its hopelessness? If they can be convinced that practical results are possible within a reasonable time, they will throw off some of the meshes of business detail now entangling them and, adding their systematic effort to the enthusiasm of the present forces, will hasten the day when the international court of justice will take the place of battleships in settling differences between nations.

What are the arguments to convince the men of business that peace is now a practical proposition?

1. The growing nearness of the nations through fast steamers, cable, wireless telegraph, rapid and general news exchange, the development of popular education all over the world and the closer personal acquaintance through travel, all tend toward universal brotherhood disregarding national boundaries.

2. The great advance in sentiment toward international arbitration during the last ten years, and the increased number of treaties between the nations that have been signed, surely augur great possibilities of general peace in the near future.

3. The terrible power of destruction now possible through modern war agencies and the still undeveloped air warships force upon all men the absurdity of "set-

ting" international differences by mutual annihilation.

Yes, the day of peace is in sight; it is not a dream any longer; now the dreamers, the far-sighted, the idealists, may at last be joined by hard-headed men of affairs whose daily cry is for results—results!

The merchants of the world have indirectly done much to bring about the improved relations between the various nations. Commerce has been a great educator and has broken down many walls of ignorance and animosity, but only incidentally, in the development of trade, not in the unselfish spirit of the peace societies.

Let these merchants now help finance the peace movements of the world and add unselfish practical coöperation in the great cause. If they do this the heavy burden of armies and navies, now becoming so alarming in the rivalry between European nations, will soon be removed and the immense sums now being used for defense and destruction will be converted to saner, constructive uses which will tend toward the elevation of the human race.—Advocate of Peace.

CHILDREN NOT CRIMINALS.

The State of New York has decided that no child under sixteen shall be called a criminal. It is simply delinquent. This is a step of progress, although not a long one. For many years a child has had no civil accountability until twenty-one, or, in the case of girls, in some States, eighteen years, up to which time he or she cannot acquire property, make contracts, or be held responsible in civil damages. One might suppose that the same restrictions would be placed in criminal law, but New York has gone only so far as to make sixteen years the crime limit, while at the same time it holds punishment in its own hands instead of turning it over to parents. The Chinese make the whole family responsible for the evil act of any member, and the results are astonishingly satisfactory.

It is admitted by students of sociology that our criminal code is crude, that our whole system of criminology is brutal and archaic, and that we must go a long way before we establish one which will really make for the betterment of social conditions. We now punish people without trying to reform them. We make professional criminals by refusing one who has been in jail a right to earn an honest living. Give a dog a bad name and hang him. And this is most illogical since the punishment is supposed to expiate the crime and make a clean sheet. At the same time, plenty of evil-doers, those who are known as such, are received in good society simply because they have managed to escape the brand of criminal conviction.

It is well enough to save children from this dread incubus, but the law has not gone far enough. Conduct is not wholly the result of a deliberately established system of individual ethics. We are affected by heredity, environment, and experience. Moreover, in this country we have forty-six bodies of criminal law—one in each State. What

*Address given at the Chicago Peace Congress in May last, by Marcus M. Marks, President National Association of Clothiers, New York.

is a crime in a given State is not always prohibited in one adjoining. Thus we have all sorts of crimes, with varying penalties, until it is no wonder that the average man is confused as to his own status. Few persons do from mere choice that which is ethically or legally wrong. Original sin, if there be such a thing, does not go so far. Our motives are generally good. Most persons prefer to live in amity with their neighbors, which means a respect for the rights of others and a tolerable performance of duties. But circumstances alter cases so much that we often feel called upon to violate the rights of others for our own salvation. We need the money, or we find ourselves losing in the struggle for existence and feel oppressed by those in power. We take our own chances and often with disastrous results.

Now it must be apparent, after all is said by philosophers and law-givers and prophets, that the conduct of life is based largely on experience. We accept admonition more or less, but learn most by actual contact with problems. It is here that the child fails. His store of wisdom and his experience are small. It is natural for him to gratify his own desires, and he chafes under restraint until a number of years of experience and parental training fit him to become personally responsible for his own acts.

It is gratifying that children under sixteen are to escape the prison mark and the criminal brand, but this is simply a confession that our whole system of criminology is on a false basis. It is well to begin reform with the children, who are perhaps the greatest sufferers and the least offenders, but the principle must be applied all the way up to the end that punishment may have the element of reform in it, so that society may profit. In a few States some progress is being made in this direction. It is one of the Twentieth Century problems to conserve society by making laws and enforcing them with regard to Twentieth Century knowledge instead of acting on the principles and practices of the Dark Ages.—November Lippincott's.

GIFFORD PINCHOT.

Writing of Gifford Pinchot is a difficult task to one who knows him—it is difficult to avoid apparent exaggeration—for Mr. Pinchot possesses in unusual degree all of the best qualities which make a man. Coupled with them he has a unique and ardent ambition to serve humanity; to exercise to the limit his remarkable abilities, his knowledge, which is unrivaled in the field to which he has devoted his life, and his resourceful personality, outside the pale of politics, wholly for the good of his country.

His name has been frequently and freely handled by press and public during the present controversy between the departments of Agriculture and the Interior, over the disposition of public lands, but though he is the responsible and active agency, in the center of the fight, it is noteworthy that not a derogatory word has been said of Gifford Pinchot. To question his integrity would be absurd. To doubt his patriotism, impossible. To criticise his ability and record needs but the reply, "By their fruits ye shall know them." To condemn his policy is to repudiate the vital principle more than anything else making for the safety and prosperity of the country for all time to come. There is no one who is more valuable to the United States today than Gifford Pinchot.

He was born to this work—born in Simsbury, Conn., not quite forty-five years ago, and created the department over which he presides and the office he holds. He is literally responsible for it all—and it is a monument worth

having. Incidentally, Mr. Pinchot was born to a large fortune which obliterated all necessity for further energy, but even while he was in college the passion had such possession of him that, while he found time to captain the football team and carry off several of the most coveted of the college prizes, he also won for himself the reputation of being "mad on trees."

Immediately after graduating from Yale he went abroad, and with ardent energy and thoroughness which are vitally a part of him, he made a complete study of forestry, in countries and localities where the mother of invention had brought the art of highest development. Thoroughly equipped, he returned to America, where, of all places, he was needed, but where there was no place for him until he made it. The public was peacefully sleeping upon convictions of the unlimited and inexhaustible resources of the country, while the lumber interests, coal interests, water-power interests, etc., were absorbing everything, denuding everything and arranging for a sad awakening of the public to general devastation in the near future. His first determined effort to accomplish something was in 1892, when he opened an office in New York, for consultation and advice to owners of timber lands. Sixteen years later, in addressing the great Conference on the Conservation of National Resources, held at the White House, where the Governors and delegates of forty-six States met with the Cabinet, the Supreme Court and the Inland Waterways Commission, President Roosevelt said:

"I want to say, here, that if it had not been for Gifford Pinchot this conference never would or never could have been held."

In a speech in Jamestown, Va., the year before, the President said:

"So much for what we are trying to do in utilizing our public lands for the public in securing the use of the water, the forage, the coal, and the timber for the whole public. In all these movements my chief advisor, and the man first to suggest to me the courses which have actually proved so beneficial, was Mr. Gifford Pinchot."

The story of the sixteen years between the private consulting office and these declarations sounds like a fairy tale. One fancies he must have held a magic wand to have accomplished the apparent impossibilities; but it is only the result of herculean industry and indomitable energy applied, without personal ambition, to one specific end. It was not more than ten years ago when he succeeded in forcing upon public attention the first glimmering consciousness of the ruin which the madness of private greed was working, and the salvation which method must eventually mean if honestly applied to national forestry and conservation of resources.

The United States Forest Service is Mr. Pinchot's own creation, from the inception up. First a Division of Forestry was created, and he was made its head. Then its scope was widened a little and called the Bureau of Forestry. Then the entire forest interests of the United States, which were divided between the Department of Agriculture and the Department of the Interior, were consolidated in the Forest Service, under the Department of Agriculture, and Pinchot was made Chief. Ten years ago he had eleven assistants. Now he has nearly two thousand. The territory under his control is more than five times the size of New England, and the vast machinery of the Forest Service is the best example of economical, energetic, effective and scientific work in the entire executive department of the Government. The House committee which investigated the expenditures, methods and results, a year ago, reported that the standard of the Forest Serv-

ice was fully on a par with the methods of the outside business world and superior to any other part of the public service. There is not another department like it in the world. Go there when you will, every floor of the Forestry Building is alive. Everything is rushing at full speed, but every one is working as though it was the highest joy of life. It is the atmosphere which surrounds Pinchot himself and every one under him. It is refreshing. You come away with a sense that you have been in the woods.

Without his eternal optimism Gifford Pinchot would never have succeeded, in spite of his energy and ability, for a better abused man, through the early stages of his efforts, and one better ridiculed, would be hard to find. By far the hardest part of his labor during the past ten years has been fighting, persuading, urging, educating and trying to adjust matters between the hostile private interests which were being curbed, the indifferent public, and a frequently antagonistic Congress, looking more to the present political interests than to the future public good. He is not an idealist. His policy has been to make all public lands available to the public, so far as they can be used without detriment to the future, by a simple administration which is prompt and effective—anything but bureaucratic. In the results he has seen enemies turn friends and friends become enthusiasts.

To rouse a nation, especially against its great money combinations, and accomplish the results already to his credit, in this short space of time, is almost beyond credulity. To understand it one must know the personality of the man and the spirit behind it. He is tall, but slender; nervously active and athletically self-reliant. Endurance and energy are stamped all over him. He has a handsome face, a high forehead capped with thick brown hair going gray. His eyes are quick and clear, full of fun and courage. He is a natural hunter, and next to any recreation which will take him into the forest he has a passion for deep-sea fishing. He is a leader of men because men like him, and when he convinces them that he is right they are glad to follow him. He has the finest regard for the feelings of others and is generous to a fault, but fortunately does not couple with it the usual quality of supersensitiveness which would have made his life an intolerable burden through several past years. He smiled as we were speaking of some recent attacks, a few years ago, and remarked:

"It really does not trouble me, all this criticism. It only indicates that at last people are thinking, and they cannot think long upon the subject without becoming converts."

Altogether he has one of the most attractive personalities, one of the most inspiring atmospheres and one of the best laughs extant. It is worth going up to the seventh floor of the Forestry Building just to shake hands with him.

He is the right man at the helm for the most momentous question before the nation today, involving as it does not only the exhaustion of our sources of prosperity, but the unjust absorption and unequal distribution without compensation. He is devoting his life to the conservation and replenishment of our natural resources and the equitable distribution of them, so that the people, the rightful owners of the public lands, shall not be ruinously deprived of them, or forever dependent for their homes, their minerals, their water-power and necessities of life upon a few monopolies.—The Independent.

TOADS AS BUG CATCHERS.

As high as \$25 a hundred is sometimes paid for live

toads by English and French gardeners. The toad is a highly appreciated personage in foreign gardens. Shelters are made for the toads—shallow holes in the ground covered with flat stones or boards. The toads will retire into these in the daytime and come forth at dusk for their nightly insect forays.

Prof. Hudge, of Clark University, estimated that every time the farmer's boy killed a toad he was destroying \$20 worth of stock on the farm.—Selected.

NATIONAL FARM LAND CONGRESS.

(Continued from Page 1213.)

the land," he said, "means independence and self-respect for the individual and safety for the nation. Every idle and jobless man that shuffles along a city street becomes a menace to free government and a liability to the community. A title deed to an acre of land is a guarantee of patriotism. Anarchy makes no recruits among taxpayers."

FACTS ABOUT THE PANAMA CANAL.

ESTIMATED cost of the Panama Canal, \$200,000,000.

Amount paid the French company for the title, \$40,000,000.

Amount paid Panama government for perpetual lease of canal lands, \$10,000,000.

Length of canal, 46 miles.

Canal width varies from 250 to 500 feet at the top, the bottom width being 150 feet.

There will be 5 twin locks of concrete masonry, each lock 738 feet long and 82 feet wide, with a lifting capacity of 30 to 32 feet.

Lake Bohio (artificial) covers 31 square miles.

Alhajuela Lake (artificial) covers 5,900 acres, and will furnish motive power for operating the locks and lighting the canal from ocean to ocean.

Distance from New York to Manila by present route via San Francisco and Yokohama, 19,530 miles. Distance from New York to Manila by Panama Canal via San Francisco and Yokohama, 11,585 miles.

Distance saved in a sailing trip around the world by the new route through the Panama Canal, 2,768 miles.—*Woman's Home Companion*.

Between Whiles

Necessary Precaution.—"Prisoner at the bar," said the portly, pompous, and florid magistrate, "you are charged with stealing a pig, a very serious offense in this district. There has been a great deal of pig-stealing, and I shall make an example of you, or none of us will be safe."—*London Daily News*.

ON THE SWEET GRASS

J. F. Appleman and wife, Plymouth, Ind., and R. E. Arnold, Elgin, Ill.

Glass Brothers Land Company, Big Timber, Montana.

Big Timber, Mont., May 8, 1909.

Gentlemen: I have taken several days in looking over Sweet Grass County, Montana, and have looked over your irrigation project. I have been careful in my investigation, looking into the grain, stock and fruit raising, and must say that I am more than pleased with what I have found and wish to recommend same to my friends; and I also feel that anyone looking for a home should not wait until tomorrow, but go now as these lands will surely be sold in a short time on the liberal terms you are offering settlers. The lands and irrigation works are far better than you have told me.

Thanking you for your kindness, and wishing you success, I am,

Yours truly,

(Signed) J. F. Appleman, Plymouth, Ind.

Formerly State Superintendent of the Mexico (Ind.) Old Folks' & Orphan Children's Home.

Glass Bros. Land Co., Big Timber, Mont.

Elgin, Ill., Oct. 18, 1909.

Gentlemen: It was my pleasure to spend several days investigating your lands and irrigation project in Sweet Grass County, near Big Timber.

The longer I looked the better I was impressed with the possibilities of the country. Alfalfa fields were the finest I ever saw. Oats, wheat and other grains were in abundance. I am fully convinced that apples will grow to perfection there. Wherever orchards were seen the trees were full of perfect apples and not a wormy one could be found.

Your irrigation system is well constructed and my opinion is that it will supply more than ample water for your lands.

I was so well pleased with the conditions and possibilities of the country that I purchased 160 acres and propose to put a tenant on it and improve it, and also expect to put at least 19 acres in apples in the spring.

Persons desiring to better their conditions should investigate your lands. Your terms of sale are very liberal.

With best wishes, I am,

Yours very truly,

R. E. Arnold.

We invite you to investigate the possibilities of these lands.

For price, terms, etc., address,

GLASS BROS. LAND CO.

BIG TIMBER, MONTANA.

The Story of the Life and Sermons of Elder James Quinter

By Charles Foster.

A Child's Life of Christ, printed in short, easy words. The language is so simple as to be easily understood by any child. The pictures illustrate the most important scenes. The events as related in the Four Gospels are not repeated, but the details of each event are placed in their proper order, thus making one full, complete and interesting account of the Life of the Master.

The value of this book to those who wish

to instruct the young in the truths of the Bible can scarcely be overestimated. Its very general use, and the sale of more than 180,000 copies is proof of its merit and popularity. Bound in fine cloth, stamped in gilt and colors; with ornamental design. One hundred and fifty illustrations. 366 pages.

Price, postpaid, 62 cents.

Price, by Mail, Prepaid.

Red Cloth, Embossed and Stamped in Black,25 cents
Red Morocco, Embossed and Stamped in Gold,35 cents

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

Gist of the Lesson, The

By R. A. Torrey

For the busy teacher. To be carried in one's pocket. Spare moments to be improved, on trains, at home, when calling, between business engagements, anywhere, everywhere.

Great in its smallness and compactness. As Marion Lawrance says, "Boiled down and pressed, skimmed, strained, yet full, generous, helpful."

"To those who have possessed and will need no commendation. It is not used former issues that for this year only handy in form, but wondrously complete in what is necessary to the understanding of the lesson and its spiritual teachings."

Price,25 cents

NEFF'S CORNER

Survey has now been completed of a fourth railroad into Clovis. Engineers report finding a better grade than they expected, so grading will probably soon begin. This road will connect us with the Dawson coal fields to the northwest. Construction work—grading, laying steel, building depots, etc.—is being rapidly pushed on the road coming in from Galveston. Rumor has it that the contract has been let for enlarging the Clovis roundhouse and shops and our business men think we will have a population of 10,000 in two years. I have a few lots there I will sell now at half what they will probably bring in a year from now. I suppose you wonder why I don't hold my property there if prospects are so good. Well, I have done well by selling at small margins, buying again and so turning my money often, and as I am now contemplating some investments elsewhere, I am offering you the handsome profit I think I would make by holding the property another year.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

CALIFORNIA HOMES

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. California appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"I have 20 acres in alfalfa, seeded March 1, 1909. I cut it May 1, 1910, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.

J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.

C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, rates for homeseekers.

CHRISTMAS CAROL

The earth has grown old with its burden of care,
But at Christmas it always is young;
The heart of the jewel burns lustrous and fair,
And its soul, full of music, breaks forth on the air
When the song of the angels is sung.

It is coming, Old Earth, it is coming tonight!
On the snowflakes which cover thy sod
The feet of the Christ-child fall gentle and white,
And the voice of the Christ-child tells out with delight
That mankind are the children of God.

On the sad and the lonely, the wretched and poor,
That voice of the Christ-child shall fall,
And to every blind wanderer opens the door
Of a hope that he dared not to dream of before,
With a sunshine of welcome for all.

The feet of the humblest may walk in the field
Where the feet of the holiest have trod;
This, this is the marvel to mortals revealed
When the silvery trumpets of Christmas have pealed:
That mankind are the children of God.

—*Phillips Brooks.*

Gist of the Lesson, The

By R. A. Torrey

For the busy teacher. To be carried in one's pocket. Spare moments to be improved, on trains, at home, when calling, between business engagements, anywhere, everywhere.

Great in its smallness and compactness. As Marion Lawrance says, "Boiled down and pressed, skimmed, strained, yet full, generous, helpful."

"To those who have possessed and will need no commendation. It is not used former issues that for this year only handy in form, but wondrously complete in what is necessary to the understanding of the lesson and its spiritual teachings."

Price,25 cents

NEFF'S CORNER

Survey has now been completed of a fourth railroad into Clovis. Engineers report finding a better grade than they expected, so grading will probably soon begin. This road will connect us with the Dawson coal fields to the northwest. Construction work—grading, laying steel, building depots, etc.—is being rapidly pushed on the road coming in from Galveston. Rumor has it that the contract has been let for enlarging the Clovis roundhouse and shops and our business men think we will have a population of 10,000 in two years. I have a few lots there I will sell now at half what they will probably bring in a year from now. I suppose you wonder why I don't hold my property there if prospects are so good. Well, I have done well by selling at small margins, buying again and so turning my money often, and as I am now contemplating some investments elsewhere, I am offering you the handsome profit I think I would make by holding the property another year.

Address me

JAMES M. NEFF,

Apartado 65, Culiacan, Sin., Mexico.

JANET AND HER DEAR PHEBE

By Clarissa Dixon.

Janet and Phebe are two natural, healthy little girls who love each other with that intense affection which so frequently exists between girls. Their hopes and fears are set forth in their talks, their letters and their poetry—all genuinely child-like, amusing and touching. A revelation of the child heart that will touch the feelings of every woman and recall to her the dearest memories of her youth. Artistic cloth covers.

Price,\$1.00

THE WONDERFUL BIRTH

RICHARD BRAUNSTEIN

THE hour when Jesus was born was an hour for which ages had been waiting. It was an hour that had been destined to have immeasurable influence on all future time, and to prolong its influence into eternity. It was an event toward which all great events looked and back to which all great events point. It is the highest mountain peak of history. From it we look backward to the beginning and forward to the end of all material things, a vision that sweeps the universe and reaches through time into eternity.

This story of the human life of the Son of God, is a simple one. Great things are always simple. They do not need ornamentation, nor elaboration. "*When Jesus was born in Bethlehem of Judea.*" Thus, in striking simplicity, begins the story which not only fills the Bible, but fills innumerable volumes and which age to age has increasingly told in book, in discovery, in invention, in art, in human progress and improvement, until the whole world is filled with the glory and power of that life which began its earthly manifestation in *Bethlehem of Judea*.

As an illustration of the simplicity of this story and of its greatness in its simplicity, compare the Bible story of Jesus with the stories of other distinguished religious characters. Compare it, for example, with the story of Mohammed. It is told for the serious consideration and belief of mankind, that at the age of two years, the young Mohammed was brought by his nurse to visit his mother at Mecca. After a short stay, under the pretense that the climatic conditions there were unfavorable for him, he was carried back to the tribe by his nurse. One day he had wandered with some of his companions into a valley, when, at mid-day, one of them returned home weeping, and besought the foster mother that she hasten in search of the youthful Mohammed for the reason, that a band of wonderful beings had descended from the sky, and snatching the child from them, had carried him to the top of a neighboring hill and were there cutting him open. Hastening to the rescue of the boy, they found

him without a mark of violence on him. In response to inquiries as to what had happened to him, he told this story: "Two persons had suddenly appeared to him, one bearing a sword of burnished silver, the other an emerald basin filled with snow. Conveying him to the hill, they laid him on his back and cut open his body. They then gently removed his intestines, placed them in the basin of snow, and having thoroughly washed them, replaced them in his body. Then one of the persons thrust his hand into the boy's chest, and took out his heart. This was laid open and from the center there was removed a black spot which was declared to be the *Seal of Satan*—the evil propensity, the original sin, and this was cast away. Thus they injected into the heart something which he was unable to describe, but which produced a more delightful sensation than he had ever known. Lastly they rubbed his body with their hands, completely healing the wound and leaving no trace of it, and leaving him spotless, and pure with no taint of sin."

Such is the story told of Mohammed when he was five years of age. Even a child can detect its improbability, and its falsity is plainly apparent. In contrast with this story, and with all other mythical stories of religious leaders and human prophets, how simple is the story of Jesus, how unadorned, how straightforward, how convincing, and how believable. Its truthfulness is evident. Mysterious, and yet not mythical; marvelous but not improbable, simple but not incredible; confirmed in his own day, and to his own generation, by his character and works, increasingly confirmed in all succeeding generations and more believed today than ever—is the story of Jesus Christ. God be praised for a religion which is not founded on a *cunningly devised fable*, but upon a historical fact, and upon a person whose reality, character, teaching, claims, deeds, and all the facts pertaining to whom are historical verities. Christianity, alone, of all religions, can be *proved* to rest its claims, not on a theory, nor a fancy, and a feeling, but on *fact* and *truth*.

The history of Jesus reaches backward from before

time. When he was born the story of his human life began, but Jesus claimed that he came from heaven. When he came to tell his own history, he declared that he was with God before the world existed. He had visited this world ages before he came to it in Bethlehem. In fact, this world was made through him. "In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. All things were made by him; and without him was not anything made that was made." Thus does John begin the story of Christ. He who was born at Bethlehem was none other but the Son of God. When Jesus was born the Maker of all worlds came to dwell for a few years in this world of man, the Creator of man came to earth in the form of man; the Son of God, became the Son of man; God veiled himself in human form that man might look upon him, the Word was made flesh, and dwelt among men, and man beheld his glory, the glory of the only begotten of the Father, full of grace, and full of truth. Thus when Jesus was born, there began a new chapter of his divine and age-long history.

So wonderful, this story, that it has been repeated in every land, in every language, in every form, for two thousand years, and is still being heard today with more interest and much joy. It is being told among the redeemed in heaven, by happy souls.

When Jesus was born, promises of God, which had waited thousands of years, were fulfilled. Many of God's people had ceased to believe in these promises. The cry of their unbelief was, "Where is the sign of his coming? For since the fathers fell asleep, all things continue as they were." But this was not so. Blinded by doubt, they did not see the changes going on. They forgot that with God a thousand years are as a day, and a day as a thousand years. God's promises were ripening to fulfillment. With God there is neither delay, nor haste. God is never in a hurry, and never late. He has made his own time and keeps it. Therefore, "*When the fullness of time was come, God sent forth his Son.*" He was born when God promised. Even the cruel and murderous Herod learns about the birth of Jesus through the recorded promises of God. The report of the great event coming to his ears, he is anxious to ascertain all about it. What is his method? Does he send his soldiers and servants through the land to find out? There is a quicker and surer way. He calls the men who are well instructed in the Scriptures and demands them to tell him where Christ is to be born. Most remarkable circumstances that, of this heathen ruler seeking accurate knowledge of this great event through the Scriptures. And the men who knew the Scriptures were able to tell him. "And they said to him, In Bethlehem of Judea." Are you sure? How do you know? "For thus it is written."

How surely and gloriously was the Word of God fulfilled when the infant Christ was born! So will it ever be. Are you fearful and doubtful? Are you afraid that the purposes and plans of God may be thwarted? Are you disturbed by the mocking unbelief of the world? In mysterious and trying experience does it seem as if God had forgotten; after long and painful waiting and much prayer with no apparent answer is there no sign of his coming and do all things seem unchanged? *Away to Bethlehem.* Go and stand by the manager cradle of the new-born Christ. Recall how wondrously and exactly the promises of God were fulfilled when he was born; remember that Jesus is the pledge of the fulfillment of every promise of God and that all of God's promises are in him *yea* and *amen*. And your faith shall be renewed and increased! Your heart will thrill with joy. Your lips will confess with confidence and gladness.

Froude, the historian, commenting on the difference between Christ and Cæsar says: "In the most despised of the Roman provinces, among groups of peasants and fishermen, on the shores of a Galilean lake—in the remote and humble region, a new life had begun for mankind. They had looked for a union of God and man. They thought they had found it in Cæsar. Divided from Cæsar by the whole diameter of society, they found it at last in the Carpenter of Nazareth. The kingdom of Cæsar was a kingdom over the world; the kingdom of Jesus was a kingdom in the heart of man." In truth, a new life came into humanity when Jesus was born. The distinction is not to be lost sight of, that Jesus not only came *to*, but that he came *into* humanity. He became part of humanity, not for the brief space of his earthly career, but forever. When he was born into human life he took upon himself humanity. He carried humanity all through his earthly life, and when he left the earth he took humanity with him into the life and glory from whence he came. Veiled in human form, he was as divine as before he appeared. And today, though he has laid aside the earthly form, he is as human in heaven as when he was on earth. He came into humanity to endow it with his divine life and lift it to God. He came that man might have more abundant life: He became the Son of man, that through him men might become the *Sons of God*. Here is a new *life* a new *hope* a new and divine *destiny* for humanity.

Heaven was opened toward earth when Jesus was born. Through heaven's outswinging gates there rushed a light brighter than the stars and more glorious than the sun. Heavenly messengers descended, bringing the message proclaiming God's good will to men, and his peace. The vision was repeated when Jesus was baptized. A voice was heard saying, "This is my beloved Son, in whom I am well pleased." The vision was again seen on the Mount of Transfigura-

tion. And again the vision when Jesus ascended: "This same Jesus, who is now taken from you into heaven, shall so come in like manner as ye see him go into heaven."

And John, the beloved disciple, he too had a vision. He beholds heaven open, and he sees Jesus enthroned in glory, preparing to come again to earth, and with him millions of triumphant souls chanting the praise of the Redeemer. When Jesus was born, heaven was opened to men; during his stay on earth, heaven remained open to men; and when he ascended he left it open. Millions are following him. They are going

over the same glorious pathway. Will you make one of them? You may be, for he has given his invitation. The message is COME. Let us at this Christmas season, make of our hearts another Bethlehem, and pray his Holy Spirit to be born within us. Thus can we, by faith look into an opened heaven and say:

"Heaven is opened for me and to me, for Jesus says, 'In my Father's house are many mansions: I go to prepare a place for you. I will come again and receive you, unto my self; that where I am, there ye may be also.'"

MISS MARTHA'S IDOL

HATTIE PRESTON RIDER

TWON'T be much of a Christmas in there," said Mrs. Hall, nodding her head toward the big brown house behind the dusky cedars.

"Miss Marthy don't know the meaning of Christmas," Mrs. Graves answered, grimly. "At least, as a time of peace and good will. She hasn't ever forgiven Reuben."

"It's the Channing pride," Mrs. Hall responded. "But she worshiped him. Everybody did. A stroke of lightning wouldn't a-been more surprise than when Austin Dean swore he saw Reuben take that money. Some said having to testify was what broke him down so he had to go away. I don't know."

"Reuben's time must be more'n out, ain't it?" Mrs. Graves remarked, interrogatively.

"A year ago last April," the other answered. "But he'll never come back here. Poor Miss Martha! No Christmas in her heart, and none in her home!"

A slight rustle among the cedars startled the loiterers. As they hurried guiltily on, Miss Martha herself crawled out from beneath the branches and passed up the walk to the porch, with a tiny cheeping sparrow in her hand.

The light she struck in the tidy kitchen showed a pale, unquiet face. It was not the first time she had overheard comments, friendly or otherwise, on her closet skeleton; but tonight, somehow, they carried a fresh sting. Reuben's face obtruded itself between her and her little patient, now bright and boyish, now crazed, hardened, as it had grown under her bitter reproaches. When the time of his sentence expired, she waited, shrinking but expectant, for his return. Then, as the silent months dragged by, there grew and settled upon her the sickening consciousness that he did not intend to come. The Channing pride died hard. Tonight, its misery was keenest upon her.

Resolutely facing the dreary evening, Miss Martha sat down to her sewing. But as she drew the first

thread, a loud knock sounded. Opening the door, she was confronted by a boy with a white scared countenance.

"There's a man out here jest dyin'!" he announced, excitedly.

Miss Martha's hand shook as she reached for her shawl. The catastrophe seemed a climax to her own wretched imaginings.

"How was he hurt," she asked, huskily, as they went down the walk together.

"He ain't hurt," the boy answered. "He jest lays there, gaspin'."

Reuben had had an attack of heart trouble, once. Miss Martha's own vital organ stood still as she recalled the fact. She quickened her steps, and presently came up with the little knot gathered round the unconscious sufferer, whom they had lifted to an improvised stretcher.

"Bring him into my house," Miss Martha commanded, her voice harsh with suppressed feeling; and the bearers obeyed.

When they had laid him on the spotless bed, Miss Martha, shrinking but resolute, brought a light and looked eagerly at the gray, unconscious face. The revulsion of relief was so strong it turned her faint. It was the face of an utter stranger.

The doctor came shortly. When he had made his examination, he shook his head.

"Heart failure, and poor living," he said.

All night long he and Miss Martha worked, the grimy stains on pillow and coverlet passing before the spinster's tidy eyes as things of naught. Ever confronting her mental vision hung a picture of Reuben in such pitiful straits, and at the mercy of strangers. As her hands performed their gentle offices, the softness at her heart grew, and she realized that the idol she had made unto herself was not, as her neighbor had said, the boy whom she had tended with a moth-

er's care all his young years, whose disgrace had broken her heart; but rather pride, selfish, unreasoning, blind, the pride that looked not at the worth of a precious soul, but cringed instead to the pitiless criticism of outsiders. Its dethronement was complete; and when the gray Christmas morning broke it brought peace undreamed-of to her once bitter, troubled soul.

The doctor had taken a cup of coffee, preparatory to starting on his rounds. As he turned back for a final glance at his patient, he called Miss Martha sharply. She came at once, peering past him in alarm. The look of the last great change had settled on the unconscious face, but bringing out another as well.

"Good God!" the doctor muttered. "He was so altered we did not know him! It is Austin Dean!"

He sat down stupefied. Miss Martha stood speechless, grown hot-red and then marble-white. The man whose testimony had convicted Reuben! And she had nursed him with an angel's pity!

Better thoughts came to her presently. Through them broke the doctor's voice:

"I must go, but I'll send over somebody. He mustn't be left alone a minute."

It was Squire Rogers who came, for years the business friend of the Channing family. But as the day waned, life ebbed also to its close, unconscious to the last. Then, as Miss Martha and the squire were making simple preparation of the body, a neighbor who had stepped in opened the bedroom door with a blank, perturbed face.

"There's a—a man out there wants to see the Squire," she stammered.

"Ask him to wait a few minutes," the squire answered.

Miss Martha followed the neighbor out, hospitably bent. At the sitting-room door she stopped short, a mist suddenly blurring her sight. The caller stood before the fire, clad in a long ulster, his cap in his hand, and between his fingers a wisp of yellow paper like a telegram. There were streaks of gray in the little curls above his temple, and a deep line at the corner of his clean-shaven, firmly-molded lips. But it was no mocking vision. Miss Martha gave a gasp as he turned expectantly, and their eyes met. In that one look the heart-hunger of each flashed to sight of the other. With a glad cry, Miss Martha flew into her boy's outstretched arms; and the neighbor, as one who had beheld a miracle, betook herself speechlessly to the kitchen.

"Reuben! O Reuben!" Miss Martha was sobbing like a girl on the ulster shoulder,—“I believe I've—suffered all I—deserve, even! Can you ever—forgive me?”

The big boy smoothed her ruffled hair with unsteady fingers. He still held the yellow slip.

"No doubt you had reason to feel hard, Aunt Martha."

She shook her head.

"Nothing should ever set us against our own," she declared, tremulously.

She slipped back, as the bedroom door opened and Squire Rogers stepped nervously out, carrying a handful of papers. He stared blankly for an instant, for he had clean forgotten the caller. Then a glow lit his face. Crossing the room with great strides, he caught the young man's hand in a crushing grip.

"Reuben. The Lord be praised!" he cried. "What good angel's visit is this?"

A gleam of his old merry self flashed across Reuben's face; but a shadow followed.

"Few would consider it that, sir," he answered.

"Then so many would be correct," the Squire finished, promptly. He paused a moment, and then added, as if puzzled still:

"Was it you, then, that wished to see me?"

"I came in response to this," Reuben replied, handing him the yellow slip.

The Squire looked it over.

"‘To Reuben Channing, Andover,’" he read aloud. "‘Go at once to Benj. Rogers, Warren, and receive important paper.’ Unsigned. Hum!" A great light broke suddenly over his rugged face. "Great heavens! Is it possible here is the very thing?" Eagerly, he sorted over the papers he was still holding, and selected an envelope with its seal intact. By the fading light Reuben read his own name upon it, and underneath, the Squire's.

"I found it only a moment ago, in the pocket of the man who lies dead yonder," the Squire answered his look of amazed questioning. "No doubt, he was bringing it to me, when his illness overcame him. Read it, boy!"

Reuben opened the sheet. It was brief, but he read it twice, thrice. Then it fluttered to the floor, he sank into a chair, and burying his face in his arms, broke into great, shivering, tearless sobs. White as death, Miss Martha reached for the paper, and together she and the Squire read. Though so short, it was witnessed and sealed with a notary's seal.

"Before God, in whose presence I shall soon stand, I swear that I, and I only, committed the crime of which Reuben Channing was convicted through my false testimony, and for which he was sentenced to prison.

(Signed) Austin Dean."

"A coward to the last, in that he dared not meet you face to face!" the Squire's stern voice cut the silence that followed. "But—the evidence clears you, Reuben."

It was late, but Miss Martha and her boy still sat beside the fire. From near-by steeples the Christmas bells were pealing joyfully for the evening service, and

waking a hundred sweet echoes in Miss Martha's soul. Presently she slipped her worn hand under the strong one lying on the arm of her chair.

"Reuben, dear," she said, softly, nodding her head toward the closed door, "I feel, somehow, as if he had found forgiveness, over yonder, on account of that last—thing he did; don't you?"

Reuben smiled somberly back at her, defying the pain that flitted for an instant across his face.

"He righted the wrong of his doing, Aunt Martha, as well as could be done at this late day," he answered.

Miss Martha's eyes shone.

"There is peace and good-will, at last," she said, reverently; adding, as if some memory recurred to her:

"And, we,—O Reuben! We have Christmas in our hearts and our home forever, now!"

SUCCESS.

AMANDA TETTER BJELKSTROM.

"THE greatest joy of all joys is the joy of going on"—or in other words the joy of a successful life. It is estimated that one man in every ten wins in the fight for success.

That tenth man wins because self-appreciation and the estimate he has of his own capabilities won't let him stop. He knows he can and therefore does. The other nine stay at the foot of the ladder or mount only a few rounds because—like Lot's wife—they turned and looked backward. Onward, upward are the watch-words.

There are many essentials to a successful life. The one essential without which all others become valueless is that "something within" which tells us we can—that inmost conviction that we will succeed—that inner determination that positively will not be downed.

We all have that power that can,—it is inherent in every mind, is just as natural as life itself. But so few learn to use it. When we become conscious of the power within us—have aroused the power that can, this not only gives *capacity* to succeed but also a *desire* to succeed.

By doubting we suppress the power that can. Doubt must be removed before success can be attained.

Success is for every one. Any man may succeed if he will bring out *all* that is in him.

Another essential and second to none is *faith*, a word which few of us understand; yet it is one of the greatest words in existence; a power through which all things become possible. When we have faith in our powers we feel still greater powers and thus become ambitious which is necessary to keep us going on.

"You can not fail so long as you are growing in power, ability and practical efficiency; so long as you are growing in the power of desire to succeed, in the power of ambition to succeed, and the power of

determination to succeed. And all these things become stronger and greater the more real positive faith you have in everything that is contained in your life." All real abiding faith is calm and strong.

We must have an ideal, an aim. The higher the aim, the higher we reach. We must use all our forces of thought and imagination in working up to our ideal and train all our faculties to focus their activities on the goal we wish to reach. "Hitch your wagon to a star."

The great Power of which we are a part will work with us. "I and God never fails; I alone, seldom succeeds."

Another essential is ability. Yet those of greatest ability are sometimes confused and depressed with so much doubt and fear that not a single faculty gives expression to more than a fractional part of its inherent power. Consequently they fail while those of lesser ability surmount the ladder and reap rich reward because they know they can. There must be something back of ability to push it to the front. Of course we should work in the field in which we have a natural aptitude,—work where the heart is and our success will be many times greater. We may be forced to work elsewhere through adverse circumstances, usually lack of money. This we can use as a "winding up process,"—use our spare moments in preparing to work in the desired field. All this time we must keep within a persistent desire, a striving for, a determination to win at some time. We will reach our field wound up and so much the better prepared.

And always we should keep a deep feeling of calmness and strength. The greatest forces in the universe work in absolute stillness—and it is only the force that is calm that can build.

Neither can we run away from difficulties in our race for success. We will continue to run against them until we meet them face to face and *conquer* them,—not by passive endurance but by battle whereby we are the conquerors.

Honesty and industry are rounds in this great ladder; honest in our dealings with others as we would have them be to us.

The accumulation of wealth is not a requisite of a successful life. We get our necessary portion as a result of success in our special field,—for this is one of the things that shall be "added unto us." The most successful Personality since the creation made no effort to accumulate this world's goods yet he was never in *want*.

To me he is most successful who at eventide can feel he is nearer his goal than at dawn, who has lent a helping, uplifting hand to some needy one, who has strengthened his powers until he knows he can take yet greater strides on the morrow, who has filled with a desire to be truer, purer and more courageous all with whom he came in contact. We are bound to thus succeed for we are joint heirs with—Perfect Success.

Historic New England

T. H. FERNALD, BELFAST, MAINE

Chapter VI.

IN 1691 ten squaws received the hospitality of the citizens of Dover, New Hampshire, and were lodged in fine garrisoned houses. The people had no suspicion of their treacherous intentions. In the night the squaws, two in each house, arose and unbarred the doors, admitting the savages who were outside, and a terrible massacre followed from which only three persons escaped.

A band of Indians attacked Haverhill, Mass., in March, 1697, killing twenty people and carrying away many of the women and children, who later suffered death. Mr. Dustin, who was working in his field, realizing the cause of excitement, leaped upon his horse, and rode with all his speed to aid his wife and children. He bid his little flock "run ahead" and retreated slowly, keeping the Indians back with his gun, bringing his children off in safety. His wife, being unable to escape, was dragged into captivity, and after marching many days through the forest reached an island in the Merrimac River, where she resolved to escape. A white boy, who had been taken prisoner some time before, found from his master at Mrs. Dustin's request, how to strike a death-blow and how to take a scalp. Having learned these, in the night she awoke the boy and her nurse, and arranged their parts, and the task was soon accomplished. Each seized a tomahawk and killed ten of the sleeping Indians, only one escaping, and scalped them to prove their story upon arriving home. They then hastened to the bank of the river where they found a canoe, descended the river and were soon with their own family.

Another strange paragraph in the history of New England is the Salem Witchcraft. We are at times obliged to turn from the stately progress of affairs to the occult movements of the human mind, and note its diseases and delusions, and mark the crimes which it is capable of committing during these periods of delirium. Over two hundred years ago the fathers of New England were subject to that strange intellectual and moral disease which caused the terrible deeds of the Salem witchcraft. This broke out in a part of Salem village, Massachusetts, known as Danvers, and was traced to the hatred of a minister named Samuel Parris against a former pastor of the church, George Burroughs. Parris brought the charge of witchcraft

against several of the friends and adherents of Burroughs and they were imprisoned and tried before the Deputy—Governor of the colony—Stoughton. Parris, who was in correspondence with several Boston pastors, secured the help of the celebrated Cotton Mather in prosecuting these alleged witches. Mather undertook the cause and was the most responsible for the horrors and crimes that followed. Twenty innocent persons, including many women, were put to death, and forty-five others tortured into confession of abominable falsehoods. One hundred and fifty others lay in prison awaiting their fate. Still two hundred others were accused or suspected, and ruin seemed to hang over New England. The terrible mania spread. Committees of examination were appointed and trials held. Most improbable stories were believed. To express a doubt of witchcraft was to indicate one's alliance with the evil spirits. Clergymen, magistrates, and even the governor's wife, were implicated. After fifty-five people had been tortured and twenty hanged, the people came to their senses. The belief in witchcraft had by this time become universal. Sir Matthew Hale, a most enlightened judge of England, tried and condemned persons who were accused. Blackstone later declared that "to deny witchcraft was to deny Revelation." Cotton Mather, the minister who was active in rooting out the supposed crime, published a book of the most ridiculous witch stories imaginable. One judge who took part in the persecutions, was afterwards so deeply penitent that he observed a day of fasting each year, when he would rise in his place in the Old South Church (Boston) and in the presence of the congregation, hand to the pulpit a written confession of his error and pray for forgiveness.

It is in the nature of such atrocities—diseased as they are—to cure themselves by reaction. The reaction came at the very height of this delusion, and the people arose and righted themselves. Mather cried against it, yet the witch tribunals were overthrown. In October the General Assembly convened and the court appointed by Gov. Phipps to sit on these cases, was at once dismissed. The spell was broken; the thralldom of public mind was broken; reason shook off its terror; and the prison doors were opened and these poor

victims of superstition, malice and delusion were once more free.

The General Court of the Colony of Massachusetts in 1636 appropriated between \$1,000 and \$2,000 to found a college at Newton. Plymouth and Salem helped the enterprise as did the settlements in the Connecticut Valley. John Harvard, a young minister of Charlestown, in 1638, at his death, bequeathed his library and nearly \$5,000 to the institute. The school, in memory of its benefactor, was called Harvard College, and in honor of the place where many of the leading men of Massachusetts were educated, the name of the town was changed from Newton to Cambridge.

In 1638 Stephen Daye, an English printer, came to Boston with his outfit and the following year set up his press at Cambridge. His first publication was an almanac for New England, and in 1639 Thomas Welde and John Eliot—two ministers at Roxbury—and Richard Mather of Dorchester, translated the Psalms from the Hebrew into English verse, and published their work in a volume of three hundred pages—which was the first book printed in America.

The population of New England was now increasing very rapidly. Nearly fifty towns and villages dotted the country. It was estimated that one million of dollars had been spent in settling and developing this country during the first twenty years from the founding of Plymouth. Manufacturers, commerce, and the arts soon began. A ship-builder, John Stephens, who came in 1629, built and launched an American vessel of four hundred tons burden, and before 1640 about two hundred and ninety-eight ships had anchored in Massachusetts Bay. This year showed a population of 21,200.

Early in the history of New England practical measures were taken (1639 and 1643) first in the Massachusetts Assembly, afterwards in the neighboring colonies, looking to the union of all. The act was adopted by the Massachusetts Bay, Plymouth, Connecticut, and New Haven Colonies, which united in a confederacy, called the United Colonies of New England, the chief authority being vested in a General Assembly composed of two representatives from each colony, chosen annually at an election, by all the free-

men voting by ballot. The Colonies being under the general authority of the King of England, no president was provided for, other than a speaker of the Assembly, and he was without any executive powers. The local governments were retained by vote of each colony, and all subordinate questions of legislation were referred to the individual members of the Union.

The people of Massachusetts were not attached to the King's party, but were attached to the Republican and Parliamentary cause. The throne was in fear of peril from those in the English House of Commons who were in alliance with the colonists of New England, many of their friends having become members

of that body. American Puritans by voice and sympathy sustained the revolutionary party during the civil war in England. The feelings of the colonists, however, were modified by distance, and when Charles I was brought to the block those whose fathers had been exiled by his father preserved the memory of his virtues and lamented his tragic fate.

Cromwell, who understood the temper and sentiment of the people of New England was always their true friend, as they were his favorite people. He was bound to them by all the ties of political and religious sympathy. For more than ten years his hand rested heavily upon the English people, and he might be called their oppressor, but Cromwell remained the benefactor of the English in America.

The friends of Roger Williams at Boston led a movement to have him recalled from banishment but the Boston ministers opposed the proposition, on the grounds that his "teachings and principles would subvert the Commonwealth of Massachusetts," and the proposal was rejected.

A company of exiles arrived at Rhode Island in 1638, led by John Clark, William Coddington, and Mrs. Ann Hutchinson who left Massachusetts to found a colony on the Delaware River. They were welcomed by Williams (who had returned) and Henry Vane, Governor of Massachusetts at that time, and induced Minatonomo, Sachem of the Narragansetts, to make a gift of the island of Rhode Island, upon which they planted a colony. Here they first founded Portsmouth. This little party took ancient Israel as a model of their constitution; established a theocracy and made William Coddington judge. It seems strange to see an attempt to revive a form of society upon an island in Narragansett Bay, that had perished three thousand years before.

In a short time the Israel of Narragansett Bay proved a failure, but the colony did not fail, but multiplied and grew stronger. In 1641 they established a civil government, and the style of civil affairs was called a "Democracie," or government by the people. The whole body of freemen were supreme authority, and freemen with them referred to everybody. On the seal of the State was written:—*Amor Vincit Omnia*—Love will conquer all things.

Rhode Island was not allowed to unite with the New England Union. The people of Rhode Island becoming alarmed at the refusal and the claim made by the

Plymouth colony to jurisdiction over the prosperous settlements of that region, determined to secure their existence by obtaining a royal charter, for which purpose Roger Williams was sent to England. He was received by Henry Vane, his old friend, who assisted him in obtaining a charter. Upon returning to Rhode Island he was received with great rejoicing.

The future of Rhode Island was full of promise and prosperity. The people secured from King Charles II through the agency of Geo. Baxter, the confirmation of their charter, and were firmly established as an independent, democratic state.

At the close of the century Sir Edmond Andros arrived, and breaking the seal of the colony, broke up their government, and appointed an irresponsible council and left the little "Democracie" in ruins.

King James and his royal governors passed away together in 1689, and on May 1, 1690, liberty was restored to the people of Rhode Island, their democratic institution was revived, and Walter Clark re-elected governor, but he refused as did Gov. Alny. Henry Bull, a Quaker, was finally chosen, and the little State began to prosper. The colony rested in peace for fifty years, and the principles of the great founder became in a large measure the principles of the State, and remain the same to this day.

CHARACTER STUDY WITH HAWTHORNE

OTHO WINGER

I. Ethan Brand.

ETHAN BRAND lived a solitary and meditative life among the hills of Old New England. His work was that of a lime-burner. Day after day, and night after night he sat by his kiln and kept the fires aglow that turned the mountain stone into lime. He was a close student of human nature, and it was "with reverence that he had looked into the heart of man, viewing it as a temple originally divine, and, however desecrated, still to be held sacred by a brother." He had a reverence for God whom he constantly recognized as the kind and loving Father of the universe.

In the course of time his constant habits of study resulted in great intellectual development. But he also grew cold in his reverence for God. His sense of brotherhood with man grew weaker as his intellect grew stronger. He engaged in philosophical meditations on abstruse subjects. His chief thought was concerning the unpardonable sin. He became desirous

of knowing what it was. It was said that night after night he called forth an evil spirit from the red-hot furnace, and with him he held long conversations, endeavoring to discover some sin that the infinite mercy of heaven could not reach.

Not being able to find the object of his search at home and in the hearts of those he knew, he started out into the world to enlarge the sphere of his observation. He searched in many lives and prompted many to sin for no other purpose but his own investigation. The object seemed to operate as a means of education. He acquired such knowledge that the philosophers and universities of the earth were glad to acknowledge his merit and pronounce him great.

"So much for the intellect! But where was the heart? That, indeed, had withered,—had contracted,—had hardened,—had perished! It had ceased to partake of the universal throb. He had lost his hold of the magnetic chain of humanity. He was no longer a brother-man, opening the chambers of the dungeons

of our common nature by the key of holy sympathy, which gave him a right to share in all its secrets; he was now a cold observer, looking on mankind as the subject of his experiment, and, at length, converting man and woman to be his puppets, and pulling the wires that moved them to such degrees of crime as were demanded for his study."

In Ethan Brand a wonderful transformation was wrought. From a simple-hearted, loving man he was gradually changed into a fiend. His intellect had grown but his moral nature had ceased to keep pace; rather, under the blighting influence of his unnatural ideal, all the better part of his nature had become so dwarfed and hardened that he was no longer susceptible to any good influences. Having chosen to reject and desecrate the good things of God's creation, he lost the capacity of the healthy feeling that he once possessed.

In his wide search he coldly observed and experimented with the blackest sins known to man; but in no heart could he find a sin that seemed to be unpardonable. However, little by little, the truth came to him, that he was to find that dreadful thing. Where was it? In the heart of a murderer? In the life of the profane man? In the vile life of the robber? No, not there; but in his own heart. It had grown within his own breast. "The sin of an intellect that triumphed over the sense of brotherhood with man and reverence for God, and sacrificed everything to its own mighty claims; the only sin that deserves a recompense of immortal agony!"

Having achieved his purpose he returned to his native land. He found another lime-burner, Bartram, at the place where he and the fiend, twenty years before, had held conferences concerning the unpardonable sin. The word quickly spread to the neighbors that Ethan Brand had returned. They came at a late hour in the night to see the almost forgotten wanderer. He cared nothing for their greetings and they were as little attracted toward him; the younger children instinctively recoiled from the sight of the unnatural man. Amid the rambling conversation and the exhibition of some pictures by a wandering, German Jew, a very laughable event occurred. An old dog seemed suddenly possessed with the idea of catching with his teeth his short, stubby tail. Around and around he went with the tail always a little in the lead. This performance continued amid the yells of the laughing villagers until the cur was out of breath.

There was one spectator, however, who saw in this ridiculous affair quite a different analogy from what appeared to the rest of the company. It was, to Ethan Brand, a very likeness of what his own foolish search had been. He had spent a score of years in chasing that which was in his own heart. Seated upon the log, at this strange hour of the night, he broke forth

into an awful laugh—an expression of his own inward being, but to the merry crowd it undoubtedly seemed to be as the laughter of Satan as he was made sure of one more angel.

The crowd scattered to their homes at once. At Ethan Brand's request he was permitted by Bartram to watch the kiln through the night. Then in the awful solitude he recounted to himself his early life; the beginning of his strange desire; the various and foul means by which he had sought it; his loss of sympathy and love for his fellow-men; and his terrible situation now that he had attained it. This consciousness of his condition was too great to endure. He rushed to the top of the hillock overlooking the kiln, and there at his feet he viewed the fiery furnace where dwelt the fiends of long ago. A few words commending himself to the deadly element, a terrible laugh that rolled forth through the nightly air, and all was quiet again.

In the morning when Bartram came to his kiln he found that the fire had gone down, that the lime was burned enough, only there was half-a-bushel more than he expected to find. There lay a human skeleton, thoroughly converted into lime. "Within the ribs—strange to say—was the shape of a human heart."

This stony heart is to be found in the breasts of many men today. Must you go to the murderer's cell, the dismal room of the "white slave," or to the hidden retreat of the robber in order to find it? You may not even find it there. Where then? It may be within the breast of the college graduate who has scaled the heights of intellectual eminence. He may be a far-famed teacher in a modern university, the president of a modern trust; or a member of our national Congress. Whatever his acquired ability, if his heart has lost its tenderness and has ceased to throb with the great pulse of humanity, and if his conscience no longer causes him to recognize the authority of the divine law, he too, like Ethan Brand, is engaged in a vain pursuit. He is becoming more and more an unneeded person in the world. Disgusted with himself, spurned by his fellows, rejected by God, he is a fit candidate for the abode of devils.

IN some way the first and second columns of page two of last week's INGLENOOK became transposed after the forms reached the press room, and in reading the first-page article it is necessary to read the second column before the first on second page.

CAN anything be sadder than work left unfinished? Yes; work never begun.—*Christina G. Rosetti.*

"A MAN in anger is like a chariot without a driver, a ship in a storm without a pilot, a scorpion which stings itself as well as others."

NATURE STUDIES

SILKWORMS.

JOHN H. NOWLAN.

THE raising and manufacture of silk are among the very ancient arts. Where did they originate? The Chinese claim this, just as they claim every other invention.

We are told that the Empress Si-ling-Chi was the inventor of the industry. 4559 years ago (2650 B. C.) she taught the people to reel and weave silk, for which she was placed among the Chinese divinities as "Sien-Thsan," which means, "The first promoter of Silk Industry."

When the first settlers came to America they soon looked to the raising of silk worms as an industry of great promise. And why not? The climate was suitable, the people were as skillful as others who had made a success at the work, and mulberry trees were plentiful. All these attempts have been failures. Why? The reasons were not climatic, for the ventures extended the whole length and breadth of the land—from Maine and Florida to California. The reason is not to be found in the time of establishing the industry, for the attempts date from colonial times to the present. The chief factor has been and is yet the cost of labor. In Europe wages run from eight to twenty-five cents per day, while in Asia laborers are paid as low as two cents per day.

Just before the period of wildest speculation (from 1837 to 1840) the Cheney Brothers were interested in the raising of silk worms and later in the sale of mulberry trees. Both of these enterprises failed, but in 1838 one of them started a small plant to make sewing silk at South Manchester, Conn., in which he was later joined by his brothers. From this modest beginning has grown a vast industry. This pioneer firm is still in operation, employing thirty-six hundred operatives.

The last estimate of the world's production of silk is given by French authorities as 33,091,000 kilos. A kilo equals about 2.2 pounds. China, Japan and Italy are, in the order named, the greatest producers of raw silk, and China, United States, France, Japan and Germany are the leading manufacturers of raw silks.

Silk is the product of cocoons made by the silkworm which is reared in Asia and Europe. The food of the worms is almost exclusively the leaves of the mulberry tree, though there are certain coarse, wild silks

such as the tussahs, found in China, Korea, Japan and India, the worms of which live on the leaves of a certain species of oak.

The cocoons vary much in color. Most of the European are bright yellow, though some are white. On the other hand most of the Asiatic cocoons are white, while a few are yellow. The wild silks are for the most part ecru color, though some are pale green. As I write, on the table by me are samples showing the colors, ranging from the ecru tussah and bright yellow Italian to the pure white Canton filature. This color, in all but the wild silks, is due to the gum with which the fibres are stuck together, and which is removed by boiling in soap and water before the silk is dyed.

Like all insects of its class the silkworm passes through three stages. The first is the caterpillar or larva, the second the chrysalis, and the last is the perfect insect or imago.

Let us begin with the egg. This is round, slightly flattened, and much resembles a turnip seed. When the egg hatches the worm is scarcely an eighth of an inch long, covered with black hair, and possessed of sixteen small legs. In this stage they are fed on the leaves of the mulberry tree, cut finely, not bruised. At first the worms can only suck the sap of the leaves, but soon are able to eat the tender portions.

The larva has a cylindrical body composed of twelve segments. The black spots on its sides are the breathing tubes, or rather the openings of them. They are known as spiracles.

The worm has four molting seasons, at each of which it sheds its skin and gets a new one. In this the old skin breaks at the nose, the head is pushed out, and the worm wiggles its way out of the skin. A liquid is secreted between the old skin and the new one which assists in the operation of molting.

For some time after each molt the worm remains in a semi-torpid condition, known as a "sleep." During this time changes take place in the appearance of the worm, its body losing the shiny aspect. When fairly over its molt it eats continuously till time for the next change, and rapidly increases in size.

After the completion of the fourth molt its appetite is greater than ever but the worm soon loses its appetite altogether. In this stage it is about three

inches long and prepares to spin its cocoon. It loses about an inch in length, grows nearly transparent, and acquires a white, green, or pinkish hue, according to the race, seeks a quiet place and prepares to spin its cocoon. In about seventy-two hours it has completed its cocoon and is concealed from view. After four or five days the skin breaks and the insect issues from its old covering as a chrysalis.

Although apparently asleep, this is a period of great activity, for the entire anatomy of the insect is transformed. The wings, antennae, legs, etc., are developed and at the expiration of eighteen or twenty days the complete insect emerges from the cocoon.

This will ruin the fibre for unwinding, so to prevent its escape the cocoons are heated by steam to kill the chrysalis, after which they may be kept indefinitely.

The moths begin to lay their eggs in a few hours, which is usually completed in two or three days, then in from six to twelve days the mother moth dies.

The time from the hatching of the egg to the death of the moth is about sixty-five days. Only one brood a year is produced here, but in China they have developed breeds having several generations in a year.

Mulberry Grove, Ill.

THE WONDERFUL ZAPUPE.

At Chihuahua, Mexico, an American merchant sold me a coil of rope that I desired to have used in cording a trunk. The rope, I was informed, was made of the fiber of the zapupe plant, and this meant that it had two qualities not possessed by rope constructed of the usual material, hemp and cotton; it would not kink, neither would it mildew when exposed to water.

This information aroused both my interest and my curiosity, and I forthwith set out to learn all that I could of the wonderful zapupe. My researches but strengthened the conviction I had before entertained that Mexico is indeed a land not only of astonishing but of most valuable products.

Like the henequen plant of Yucatan, the zapupe has long been known to the Indians as producing a fiber of great value in the making of bags, lariats, cordage, and especially of fish nets. The first rope made from the zapupe gave such satisfactory results that it has now become an article of extensive manufacture. Unlike the rope made from henequen, it will run freely through pulleys and through ship-blocks, never kinking. It has been found, too, that it is most durable, as it long withstands the action of water.

The zapupe plant is similar in appearance to the henequen, which grows so abundantly in Yucatan. The leaves, however, are longer and thinner, and there is more fiber. "It is white," says an authority, "when properly extracted, and is very resistant and flexible."

Large plantations for the cultivation of the zapupe plant were set out some five or six years ago in Mexico,

two of them very near to Tuxpam, are now proving the source of considerable revenue to their owners. Each plant when three years old begins to yield two and a half pounds of fiber annually, which increases to four pounds by the time the plant is five years old. One peculiarity of the plant is that the leaves must be cut every ninety days, otherwise the life of the plant is shortened.

From a most interesting article published by the American consul at Tuxpam, Mexico, we learn that if the leaves of the zapupe are not cut regularly, the plant will, at the end of its fifth year, begin to throw upward from its center a long stem which, at the end of the plant's seventh year, reaches a height of eight feet. When this stem arrives at maturity, the plant will shortly thereafter cease to produce leaves and will die. On the other hand, if the leaves are regularly cut, the zapupe will continue to produce fiber of satisfactory quality up to its eighteenth year.

From its fifteenth to its eighteenth year, branches develop at the summit of the stem. These become detached and take root in the ground. Thus many vigorous young plants, sometimes scores of them, are found growing about the old plant. These young plants are reset into other plantations thus a zapupe grower is at no additional cost in procuring young plants, as he has a volunteer nursery constantly at hand.

The zapupe resembles very closely the century plant. The edges of the leaves, however, are more sharply serrated, while the needle-like thorn at the end of each is longer and of more penetrating force. The plant is shunned by stock and does not require fencing.

In making rope from the fiber of the zapupe, on the plantations, modern machinery is used. The fiber, when ready for the market, brings eight to nine cents a pound. I understand that the demand far exceeds the supply, and that zapupe planting is fast coming to be one of the best paying industries of Mexico.—*Young People*.

F. FRITZ has discovered that the domestic cat possesses a peculiar organ of sense, consisting of a few long and stiff bristles, or feelers, which spring from a region of the skin richly furnished with nerves in the vicinity of the wrist joint of the foreleg. These organs, called "carpal vibrassæ," had previously been found in numerous animals, including rodents, edentata, carnivora, the lower quadrumana, and *Hyrax*. They are found chiefly in animals which hold their food with their forepaws, or which crawl and climb. Thus, they are wanting in the ungulata, with the exception of *Hyrax*, and also in the apes and monkeys, which possess, in their fingers and palms, much more delicate tactile and prehensile organs. It is remarkable that they are also wanting in the dog.—*Scientific American*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE wish all our readers a most joyful Christmas.

SOME people think they are observing Christmas when they are simply paying their respects to their selfishness.

THE Christmas spirit is the spirit of "good will toward men." An observance of Christmas is inseparable from an outflow of love, and the material things with which it is expressed, to men.

IT is natural that New Year's resolutions should follow closely after Christmas. Being possessed of the Christmas spirit, realizing the full significance of the day, one naturally desires to turn over a new leaf,—to undertake many improvements.

ONE of the blessed things about Christmas time, if one lives up to its full meaning, is the recognition of the common brotherhood of man. There is no rich and no poor, no great and no small as all together we lean over the lowly manger of Bethlehem. The haughty, caste-making world needs nothing more than it needs this spirit, for out of it grow the virtues that would heal society of most of its diseases.

WITH OUR READERS.

IN a recent issue we published a very interesting article on the "Literary Style of Nathaniel Hawthorne." Those of our readers who are interested in the study of literature should give the article a careful reading; if they have already read it, a second reading will do no harm as the article serves as a very suitable introduction to a series of character studies from the writings of Hawthorne which we have the good fortune to give our readers. Professor Otho Winger, of

Manchester College, is giving us these character studies from Hawthorne. The first one of the series is appearing in this issue, and there will be others to follow.

Writing in regard to this series Professor Winger says: "Of late years I have become a very ardent admirer of Hawthorne, believing him to be one of the very best writers for young people. I find too that many young people know comparatively nothing of his works. He has many very unique characters."

Many of us know only too well of the ignorance of our young people not only with respect to the writings of Hawthorne, but of real literature in general. They have no time to *study* literature at all in their feverish endeavor to keep peace with the "best sellers." It is to be hoped that all our readers, young and old, will follow these articles closely and become somewhat acquainted with a great author and take to heart the lessons which he so beautifully and so forcefully portrays.

In each of these character studies Professor Winger will first sketch the story from which the study is made so that those not acquainted with Hawthorne's writings may have no difficulty in following the study and getting the full benefit of it.

"LIFE IS DUTY."

RECENTLY Thomas P. Gore, the blind Senator from Oklahoma, noted among his colleagues for his oratorical power, addressed a large audience in Chicago on the subject of "Social Duty." He quoted the familiar lines,

"I slept and dreamed that life was beauty;
I waked to find that life is duty."

and based his address on their truthfulness. We here repeat, for the benefit of our readers, some of the very good things he said on the subject:

"Life is duty, and duty performed or duty slighted makes our pleasures or our miseries. We cannot escape from its presence or fly from its power. It is with us from the cradle to the grave.

"The greatest social duty is the brotherhood of man. We do not always understand just what it is, but if this brotherhood is to be a fact instead of a fancy the needy must have relief, grief must be comforted, the fallen must be rescued, the weary and the heavy laden must receive the kindly word and helping hand. Oh, what might be expected if his duty was universally performed by mankind. And why is it not more generally observed? Because of human selfishness, the root of every evil. Selfishness is the very cactus in the human soul, just as fraternal love is the tree of life in the human heart.

"Man's first duty to society is to himself. He must prepare for the discharge of his duties. He must develop his mental and his physical powers to their

utmost, but nature has set a limitation on these, and he must develop his moral character that the others be not vain and unavailing.

"The next duty is to family. Social duty regards the home as a sanctuary and the family as a divine institution. Without performing his duty to his family a man who poses as fulfilling his social obligations is a hypocrite.

"But all of these duties are limited. The universal duty, the greatest duty, is charity. Faith has waged war with faith, conflicting hopes have covered the earth with courage, but charity never harmed a single soul. Charity is humanity; it knows no limitations. It exists because man recognizes in his fellow-men the image of the self-made Creator."

It is unfortunate that the word duty has so generally come to stand for that which is disagreeable or unpleasant. If our duties were looked upon as privileges, and they *are* privileges, and discharged with that spirit, there would need to be little preaching done on the subject of faithfulness to duty.

INFORMATION WANTED.

JOHN WOODARD, of Columbia, Mo., who is giving our readers some excellent articles pertaining to farm life and up-to-date farming would like to have as many of our readers as can to help him get at the real facts as to why so many of our country boys and girls go to the city. He would like the information to cover the following points as nearly as possible:

1. Age.
2. The reasons given for leaving the farm.
3. The conditions of the home: whether both parents were living, or one or both dead, and whether the parents were harsh or indulgent.
4. The condition in the country: the social life of the young; whether there was much visiting among the young and whether the one in question was included in this social visiting or not. Also what forms of amusement there were in the neighborhood, either good or bad, and what they could or could not attend. When prevented, was it because of parental objections or because of natural conditions, as being too far away, etc.?

5. It would be best to have the names of those reported so as not to count anyone twice if reported by two persons. Of course the names would not be used in any way, as they are wanted simply for the reason given. Any reader is at liberty to report for several with whose case he is familiar and who would otherwise not likely be reported.

We earnestly urge our readers to take hold of the matter and help Mr. Woodard to secure the information he desires. With a number of reports from the wide territory covered by the INGLENOOK much light may be thrown on conditions that should be remedied.

WHEN MARY THE MOTHER KISSED THE CHILD.

When Mary the Mother kissed the child
And night on the wintry hills grew mild,
And the strange star swung from the courts of air
To serve at a manger with kings in prayer,
Then did the day of the simple kin
And the unregarded folk begin.

When Mary the Mother forgot the pain,
In the stable of rock began love's reign.
When that new life of their grave eyes broke,
The oxen were glad and forgot their yoke;
And the huddled sheep in the far hill fold
Stirred in their sleep and felt no cold.

When Mary the Mother gave of her breast
To the poor inn's latest and lowliest guest,—
The God born out of the woman's side,—
The Babe of heaven by earth denied,—
Then did the hurt ones cease to moan,
And the long-supplanted came to their own.

When Mary the Mother felt faint hands
Beat at her bosom with love's demands,
And naught to her were the kneeling kings,
The serving star, and the half-seen wings,
Then was the little of earth made great,
And the man came back to God's estate.

—Charles G. D. Roberts.

ONCE UPON A TIME.

My little child comes to my knee,
And tugging, pleads that he may climb
Into my lap and hear me tell
The Christmas tale he loves so well—
A tale my mother told to me,
Beginning, "Once upon a time."

It is a tale of skies that rang
With angel rhapsodies sublime;
Of that great host serene and white,
The shepherds saw one winter night—
And of the glorious stars that sang
An anthem, once upon a time.

This story of the hallowed years
Tells of the sacrifice sublime;
Of one who prayed alone and wept
While his a-wearied followers slept—
And how his blood and Mary's tears
Commingle once upon a time.

And now my darling at my side,
And echoes of the distant chime,
Bring that sweet story back to me
Of Bethlehem and Calvary,
And of the gentle Christ that died
For sinners once upon a time.

The mighty deeds that men have told
In ponderous tones or flowing rhyme,
Like misty shadows fade away—
But this sweet story bides for aye,
And, like the stars that sang of old,
We sing of "Once upon a time."

—Eugene Field.

THE HOME WORLD

THE MERRY CHRISTMAS TIME

MARY C. STONER

On the sacred wall of mem'ry
Is a picture hanging there.
Go with me behind time's curtain,
That the happy childhood veils:
View the plastic years of pleasure
When the heart was free from care,
When the home-nest held its treasures
From the blast of win'try gales.

See the merry-hearted children,
At the early bedtime hour,
Gather 'round the great old hearthstone
For some story mother tells.
'Tis the time when pure white snowflakes
Give to earth their beauteous dow'r,
When the story of the Christ-child
In the thought of mankind dwells.

Listen to the merry prattle
That the cheery household fills.
Childish voices, gleeful frolics,
Through the old brick walls do chime.
Safe are they, these little children,
Guarded by parental wills:
Ah, how happy is that fireside,
At the joyous Christmas time!

How they greet its blest returning
Through the swiftly fleeting years,
Fond of kindly gifts and pleasures,
Of their peace and earth's Yuletide.
How they grow from youth to manhood,
Still so free from anxious fears!
Others fill the outgrown cradles,
Share the happy Christmas time.

Then the youthful hearts so bravely
Go to meet the world's stern care;
In the battle sorely wounded
Long for home's sweet Christmastide;
For the balm that comes with healing
And the blessings they may share;—
Troubled hearts with homesick yearnings
Hail the blessed Christmas time.

Father, mother, honored parents,
Welcome home their children fair;
Joined in heart and aim and purpose,
All the joys and woes confide.
Manly sons and youthful daughters,
Children small, all kneel in prayer
'Round the blessed family altar
At the sacred Christmas time.

Ah! the years so swiftly vanished
With the home nest empty now
For the infants grown to manhood
In their far-off homes abide.
Father, mother sweetly trusting.
Silver, crowns their noble brow
But the great hearts fill with blessings
At the Hallow'd Christmas time.

But so gent'ly slipping from us
At the Savior's loving call
One by one we miss the loved ones
That go out upon the tide.
But beyond the mists and darkness
That the lonely hearts appall,
Sainted souls shall wait in glory
For eternal Christmas time.

North Manchester, Ind.

THE NEVER-LIGHTED FIRE

ELIZABETH D. ROSENBERGER

"I see their unborn faces shine
Before the never-lighted fire—"

—Tennyson

"THERE'S not one of us can hold a candle to Priscilla
when it comes to doin' battenberg work. Now I just

want you all to see if you could tell this piece from real
lace?" And Aunt Viny spread a piece of beautiful
battenberg work on her table for all the other members
of the sewing society to see.

"How do you do it?" inquired Mrs. Adams despair-

ingly. Mrs. Adams prided herself on her ability to do drawn-work and the monograms on her new napkins had been pronounced perfect, but she never dreamed of being able to compete with Priscilla.

"You must dream it out somehow," said one lady. "These stitches are too shadowy to be real."

Priscilla only smiled. She was used to their admiration and she always had done fancywork so easily that she never could imagine how any woman would labor over fine stitches and intricate patterns unless she enjoyed it. "You can have the pattern and I'll show you the new stitches," she said to Mrs. Adams.

"Thank you, but I'll not need them. I can piece a Rose o' Sharon quilt, but I can't do your kind of work," and Mrs. Adams went on patching a sleeve in a little jacket, content that the ordinary things of life were within her reach. And was it only fancy or did Priscilla look wistfully at the little torn jacket?

Priscilla lived alone since her father's death. And she could not bring herself to take some one to live with her as her friends all advised. "I believe you do this work to keep from being afraid," said one woman who owned up to being a coward.

"No," answered Priscilla slowly, "I am not afraid, only once in a while I get lonely."

"No wonder," replied Mrs. Adams sympathetically. "Your house is too large and old Hannah is deaf; whom do you talk to?"

"To Hannah, or rather she talks to me," replied Priscilla. They meant well, all of these women, but how could she confess to them her bitter loneliness. With one accord they would urge her to marry the pastor of their church. He was a widower with one child, and Priscilla had refused him. The strange thing about it was the fact that no one had even dreamed that he admired her. He had not been in the church a month until all the older women had, in a spirit of the most childlike confidence, urged him to marry Priscilla. And without exciting the faintest suspicion he had acted upon their suggestion. Of course there was but little sentiment in the proposal. But Priscilla had colored and faltered in her reply; she was so afraid of hurting his feelings. But he understood that she desired to live alone and did not feel capable of being the wife of so important a personage as himself, and he accepted his defeat calmly and silently.

That evening Priscilla sat down before her grate fire and asked herself if she were indeed lonely. Mrs. Smith scarcely knew what a leisure hour was. And yet Priscilla knew that Mrs. Smith felt sorry for her. And Priscilla herself wondered again as she had wondered many times how it would be to have little children playing around the fire. The sea that breaks ceaselessly along the great shore of the years left her shipwrecked—alone. One for whom she had watched

and waited never came. And Priscilla never whispered her disappointment to any one. Now the pastor had asked her to make a home for him, but she had said "no," with a half question in her mind,—should she always be alone? You know faith is as much the key to happiness here as hereafter. With the bit of battenberg in her hand she sat long over the fire, till it had died and fallen to ashes, her face buried in her hands, her heart sick within her.

With the morning life began again for Priscilla.

"I am going for a walk," she told Hannah.

"I am goin' to bake the fruit cake for Christmas this mornin'; shall I put plenty citron in?"

"Put just as much in as you like," replied Priscilla, and Hannah was pleased.

Priscilla walked out in the country to a small house on the edge of the woods where a distant cousin lay dying of an incurable disease. The silvery greenness of the maple was gone, the leaves at her feet were brown and withered. The sturdy oaks, unyielding to the winds and to the frosts were struggling, against the approaches of winter; the beeches had yielded to the December gales and the ground was covered with the scattered glories of their summer strength.

When she came to the house in the clearing as the neighbors designated it, she found several persons there. Her cousin lay white and still. "She died a half hour ago," volunteered a kind woman who was taking charge of things.

After a little, Priscilla, who had been wondering dully what she could do to help, timidly said, "If there is anything I can do, I am ready to assist in any way."

The capable woman paused for a moment with a broom in her hand: "If you'd take Sereny with you, it'd help. The child needs cloe's fur the funeral too."

Sereny herself came into the room, a forlorn little figure that mutely appealed to Priscilla, only she had never thought of taking a child into her home. What would Hannah say? Hannah who always was in a state of warfare with the bad boys of the town. Then Priscilla realized that the woman only meant for her to take Sereny till the funeral was over. "If she were older some of us'd adopt her but she is too little to do much work; reckon we'll put her to the orphanage."

Sereny went home with Priscilla. Hannah scowled, but said nothing. However, she had a plate on the tea table for Sereny and she brought out a plate of small cookies and placed them before the child.

"Can you find some clothes about the house that Serena can wear?" asked Priscilla. Hannah nodded grimly and Priscilla was forced to be content.

That first night Priscilla sat long with the little girl in her arms, telling her stories and crooning old songs until the child was asleep. Hannah with a tender awkwardness disrobed her and put her to bed. When she came downstairs, she said, "She's a likely baby,

peart an' pretty." And Priscilla knew that Hannah was willing to keep Serena.

After the funeral Serena came home with Priscilla. On Christmas eve the two watched the lights and shadows of the fire burning in the grate. Serena was glad with a sort of solemn joy; she was going to have a real Christmas tree, and some toys. The wonder of it and the anticipation of something so new and delightful and so little understood made her ask many questions of Hannah and Priscilla. After she was asleep and the Christmas tree was in place, Priscilla sat down in her low rocker to dream dreams. There was a tender regret for the one who never came to claim her, then she thought of Serena, and the dancing firelight reflected a peaceful, happy face. "The never-lighted fire," she said, "may warm her and myself."

CHRISTMAS LIKE IT USED TO BE.

Christmas like it used to be!
That's the thing would gladden me;
Bells a-jingling down the lane,
Cousin Tim, and John, and Jane,
Sue and Kate and all the rest,
Dressed up in their Christmas best.
O, for Christmas, like it used to be!
It's been a long, long time since we,
Wished (when Santa Claus should come)
You a book and I a drum,
You a doll and I a sled
Long and swift and painted red.
Wouldn't it gladden your heart to see
A good old fashioned Christmas tree
And everything as it used to be?

—Richard Braunstein.

A CHRISTMAS CHAT.

THERE is perhaps no time of the year when shopping is more fascinating than at Christmas time, and no time when it is so hard to keep sane and self-controlled in our buying. The stores are full of pretty things so alluring that they almost coax the money out of our pocketbooks in spite of us. But unless we have money to spare, it is not very safe to buy an attractive thing thinking it will do for "somebody." Unless we have in mind a particular person, such purchases have a way of being "left over." Who of us has not gone home laden with spoils from a Christmas sale, only to find when we try to fit them to the people for whom we want gifts, that none of them are exactly suited to a single person on our list? We do not want to give anyone a gift simply for the sake of giving, without regard to whether it is what that one would like or not. When we do not know precisely what we do want, it is a wise plan to make a trip or two through the shops just for the purpose of seeing what is to be had there, and then sit down quietly to think it over and decide in some measure what we will buy. Then when we go shopping we will have a definite purpose, and may be

better able to steel our hearts against what we do not really want. While this way might seem to take more time, it is likely to save it in the end as well as prove more satisfactory.—*Selected.*

TOO MUCH VENEERING.

"WE appear to think that our girls need more veneering than solidity." We want them to shine in outward appearance without much regard for the stability of what may be within.

"This is giving us, through the fault or carelessness of over-indulgent fathers and mothers, a mighty useless class of girls. They have the appearance of good things without being able to produce them. We pinch and scrimp to give them a seminary or college education, so-called, where more attention is paid to the whiteness of their hands, their dress, and their company manners, than to the solid virtues of practical knowledge, prudence, thrift, and womanliness.

"A womanly girl is deep in her emotions, and capable in her actions. She has a purpose in her life, but the veneered girls that both poverty and wealth are giving us, have neither emotion nor capability. They are neither child-bearers, home-keepers, nor love-guardians.

"The old-fashioned American girls were born gentle and democratic women, and where they lacked in poise and graciousness, the experience of the family and community life supplied the want. Finishing schools have come up since the American democratic ideal has begun to go down."—*May Warwick.*

THE POOR CHINESE WOMAN!

EDWARD W. BOK, in an editorial in the *Ladies' Home Journal*, emphasizes an important point in the following way. A woman not long ago listened to an eloquent missionary address on the Chinese women, in which special stress was laid upon the "barbarous dress" of the women of China; particularly their "bound feet." At the close of the address the woman was so impressed with the necessity of "doing something" for the Chinese women that she contributed ten dollars and said to a friend, "Isn't it awful?"

Next to this woman sat her daughter, a girl of seventeen. She wore a tight high collar, in which she could hardly turn her head; a lingerie shirtwaist was so thin that it fairly beckoned one to look at the overtrimmed underwear beneath it; her eyes looked out from under a veritable life-preserver of hair, the source of which she had no idea; she wore two combs bejeweled with cheap rhinestones; her waist was screwed into a "Number 19," and her feet were pinched into a pair of high-heeled shoes which the girl herself confessed were "all right for anything but walking!" And yet the mother of this girl is, as the world would say, a

very good mother! But for which one—the American girl, the Chinese women, or, perhaps, the American mother—should the missionary fund of education and relief have really been raised?

THE VIRTUES OF BUTTERMILK.

THE virtues of buttermilk are claimed to be manifold. Among other advantages, it possesses a large share of the acid which destroys the incrustations which form on the arteries, cartilages, and valves of the heart, and it is asserted that a constant use of it would free the system from troubles which inevitably cause death between the seventy-fifth and one hundredth years of man's life.

Buttermilk may be used freely and to good advantage by every one. Another point in its favor: Churning, the first process of digestion, is gone through with, making it one of the easiest and quickest of all things to digest. It makes gastric juice and contains properties which readily assimilate with the digestive organs. It prevents indigestion, foul stomach, headaches, aids action of healthy bowels, and saves doctor bills.—*Exchange*.

To make smooth, thick starch, free from lumps, and which never needs straining, out of the common bulk variety, take amount of starch required, a small lump of lard, and a little borax dissolved in water and sufficient cold water to dissolve starch. Have ready your kettle of boiling water, half of which add to the starch. Place over the fire and stir until it thickens. Add gradually the rest of the water, stirring vigorously until smooth. Boil two or three minutes.

The Children's Corner

FRISKY'S CHRISTMAS.

DANNY and Olive came in from school. They could hardly wait to see Mamma.

"Mamma," said Danny, "Miss Ray told us something to do." Miss Ray was Danny's teacher. "She said that at Christmas we ought to give something to somebody who couldn't give anything to us. We want you to help us think of somebody to give to."

"Suppose you try to think of somebody," Mamma answered.

Olive put her head in her hands, as if she were thinking very hard, indeed. Danny looked out the window. As he looked a squirrel scampered behind a tree.

"I have it," he cried. "We will help make Christmas for the squirrels."

Danny and Olive lived in New York. In Central

Park there are many families of squirrels. They are so tame that they are great pets.

"Oh, yes," cried Olive, "we will."

"What do you want to do for the squirrels?" asked Mamma.

"We want to trim one of their houses, and give them a Christmas dinner," Danny answered. "Last year ever so many of their houses were bea-u-ti-fully decorated."

"We must have pop corn," said Olive. "I will get the popper out."

"Squirrels must have nuts," said Danny. "I will go to the store for some."

So Olive and Danny went to work.

Olive made long strings of white pop corn kernels. Danny fastened nuts together with red and blue ribbons.

"We must have some Christmas greens, too," said Danny. So he broke some sprays from an evergreen tree.

They packed a basket. Mamma gave them some cake and candy to take. The afternoon before Christmas Mamma, Olive and Danny started for the park.

There were ever so many people at the park. They were feeding the squirrels and trimming the little homes, too. There were troops of squirrels running about. Danny threw a nut. A squirrel caught it and sat up on his hind feet while he cracked it in his white teeth.

"There are so many people here," said Olive. "Let us go back among the trees where there is no one else."

So Mamma led the way. At last they found the house they wanted to decorate. It was made of sticks and bark and set in the crotch of a tree. It was so low that Danny could climb up to it.

String after string of pop corn and nuts were hung about the little home. A plate of cake and candy was set right on the front door step. Then Mamma had a surprise ready for Olive and Danny. She took from the basket some gilt letters. They spelled "Merry Christmas." She had the hammer and tacks ready so Danny could tack the letters over the door.

Olive clapped her hands. "A Merry Christmas to the squirrels," she cried.

Then the children went a little way off and waited to see Frisky Squirrel come home.

Soon a squirrel whisked up the tree trunk. He stopped to nibble the cake on the door step. Then his sharp teeth went into a nut on one of the strings.

"Frisky will soon have his decorations eaten," laughed Mamma.

"It will be all the merrier Christmas for him," said Danny.

"And we have given to some one who can't give back," said Olive.—*Little Chronicle*.

THE QUIET HOUR

THE BIRTH OF JESUS.

D. Z. ANGLE.

'Twas not in a palace of marble,
'Twas not in a kingly home;
But 'twas from a common manger,
Came the heir to heaven's throne.

Mary the mother pure and spotless;
Joseph the husband kind and true;
Born of the Spirit by God implanted,—
Jesus the Savior for me and you.

Long had the Jews in patience awaited,
The Lord to redeem his promise once given;
To send earth his Son to atone for his people,
Cleanse and prepare them for a home in heaven.

Yet when he came, they unexpected,
That he would appear from place so obscure;
A Nazarene born in a lowly manger!
Could they accept and his teachings endure?

No! their proud hearts with envy were hardened,
Herod had heard of the Wise Men's great search;
Feared that his scepter from him would be taken,
And crimsoned his people with infantile blood.

But 'twas not meet that the Babe be thus offered,
He who must teach his Gospel to men;
Powers of earth are no match for heaven,
Jesus escaped to Egypt's fair clime.

Angels from heaven sang their glad anthems,
Shepherds and prophets gave praises to God;
A Savior is born in the City of David,
Bringing peace and good-will to children of men.

Peace to the Christian doth come like a mantle,
His sins have been lost in the crimson stream;
Christ is his model, a perfect ensample,
Good-will to all—he came to redeem.

Mt. Vernon, Ill.

THE ETERNITY OF RIGHTEOUSNESS.

PAUL MOHLER.

DID you ever see so many unbelievers? Did you ever see so many men of influence denying the truth of the Gospel? If you have, you are an older man than I am. Thousands of men, many thousands of those who should be the defenders of the Faith, are indifferent if not directly opposed to the religion of Christ. It is out of style to be pious; it takes a pretty bold Pharisee to stand on the street corner and pray in these days.

I suppose you have seen and thought about all these

conditions, haven't you? Are you too losing faith? Does it seem like a hopeless fight? Does it seem like all those smart critics **MUST** be right? Wouldn't you just like to be able to stand right up and show them all? Don't you wish you could perform a miracle or something and confound all doubters once and for all? Isn't it about time somebody is propping up the Rock of Ages?

I suppose everybody who loves the Lord feels that way sometimes, but there is no call for it. No need to worry about the Lord or his Gospel. If you are going to worry about anything, worry about the poor fools that say "there is no God."

After all, I wonder if this is really the worst time that ever has been. Might it be possible that unbelief was more general at other times than now? How about the days of Noah, or Abraham, Elijah, Jeremiah, John the Baptist, Jesus Christ, Wesley, or Moody? Every one of them came upon the stage of action in worse times than our own; and yet our time is bad enough. These are the times that try men's souls, truly; but in these times men have less excuse than ever before for losing faith. There never has been a time when Isaiah 51:6 was more clearly proven.

Do you know what Isaiah says? "Lift up your eyes to the heavens, and look upon the earth beneath; for the heavens shall vanish away like smoke, and the earth shall wax old like a garment; and they that dwell therein shall die in like manner; but my **SALVATION SHALL BE FOREVER**, and my **RIGHTEOUSNESS** shall not be abolished." Isaiah wrote that thousands of years ago; and Isaiah had never seen what we have seen. Evidently he was not judging by what he had seen, but was moved by the Holy Spirit to voice God's marvelous promises. But today we can bear witness that his salvation still endures, yea, it abounds, and everywhere that men call upon his name, he delivers them. The vilest drunkard, the foulest blasphemer, can be saved today, saved to the uttermost!

The righteousness of God, Isaiah never saw. Sinless men were unknown. It is likely that the best men Isaiah ever saw would make sorry church-members today until given the Gospel of Christ. The righteousness of men is only comparative, it is never absolute. A literal observance of the law, and faith in the prom-

ises of God, was the ideal of the Jewish church. The marvelous purity of the life of Christ was beyond the highest aspirations of the holiest men of all the ages. How could men be righteous!

But the righteousness of God is not that of men; it is the righteousness that is in Christ Jesus, the righteousness which is imputed unto us through faith in him. That righteousness is eternal, and it is ours if we are his. Thank God there is something better than we have seen! What a glory will be ours when we are clothed with his righteousness; when we are in him! That righteousness endures forever; it shall not be abolished; it can not be defiled.

But even today, I see the righteousness of God shown forth; imperfectly, indeed, and scarred by error, but the righteousness of God just the same. For "in these latter days," God has poured forth his Spirit upon his servants, and they are truly living in him; those who are "transformed by the renewing of their minds that they may prove what is the good and acceptable and perfect will of God."

Have I lost hope? I have not! The righteousness of God shall yet cover the earth as the waters cover the sea. It is in righteousness that God delights; it is righteousness that his Spirit brings forth. That Spirit is calling men and women all over the world, and they are responding.

Let critics rail,
And weaklings wail;
God cannot fail!
His righteousness must prevail.

Bethany Bible School, Chicago.

GROWTH THROUGH EFFORT.

WE were watching the plumbers as they worked on the new home. One with a simple little cold-chisel had, by dint of numerous brisk taps in a circle around it, cut in two a large iron pipe. Another was busy with a similar chisel cutting in halves a large piece of lead.

"Easy work," I said, as I watched the latter drive the chisel into the soft material.

"Yes," he replied, "but this work spoils the chisel."

"Lead is not hard enough to spoil a chisel," I insisted.

"No," the workman replied, "but it takes all the temper out of it, so that it is good for nothing else. To cut much lead will spoil the finest cold-chisel."

Soft seats, easy tasks and pathways strewn with roses, take the temper out of character, and produce good-for-nothing lives. Difficulties impart their own splendid fiber to those who master them.—*Selected.*

THE MYSTERY OF PRAYER.

It is sometimes urged that prayer is mysterious. So is everything, if we stop to think about it. Force is a mystery. Nobody knows what force is. Gravitation is a mystery. Nobody knows what gravitation is.

Nobody knows what takes place when we drop a lump of sugar into a cup of coffee. Whether the change is mechanical or chemical the very wisest men are not able to say.

We know just one thing, that by dropping a prayer into a day we sweeten the day. How that is brought about we do not know. Who has sight so keen and strong that it can follow the flight of song or flight of prayer?

Why should we not be as reasonable and practical in our religion as we are at the dinner-table?—*Charles E. Jefferson.*

WE RECEIVE AS WE GIVE.

WE receive from others exactly that which we send to them—love for service, blessing for ministry. As we gently take the trembling hand which seeks our guidance, virtue comes forth from it to make us rich and glad. There is no good deed which is interred with our bones. No kindly act can ever die. It flows from heart to heart, and makes the whole world richer. Stretch out your hand in loving-kindness, and a hundred will grasp it. Sing one song of trust and hope, and a hundred will take up the melody and send it down the years. Do one real deed of Christlike service, and it will not only prove a gift of bread, but of seed corn which shall produce a harvest after its own kind. We receive as we give, only in richer measure.

"There are loyal hearts, there are spirits brave,
There are souls that are pure and true;
Then give to the world the best you have,
And the best will come back to you.

"Give love, and love to your heart will flow,
A strength in your utmost need;
Have faith, and a score of hearts will show
Their faith in your word and deed.

"Give truth, and your gift will be paid in kind,
And honor with honor meet;
And a smile that is sweet will surely find
A smile that is just as sweet.

"For life is the mirror of king and slave,
'Tis just what we are and do;
Then give to the world the best you have,
And the best will come back to you."

—Robert P. Downes, LL. D.

ECHOES FROM EVERYWHERE

As agricultural commissioner of the Russian government Theodore Krystofovitch will establish a permanent office in St. Louis for the study of American agriculture for the benefit of Russian farmers.

The Carnegie Steel Company of Sharon, Pa., has announced that it will give preference to total abstainers in promotions. Also notices have been posted. Its employes are forbidden to drink in saloons on or off duty.

Interest in the question of home rule for Ireland was revived recently when Herbert Henry Asquith, the British prime minister, promised that in case he was returned the liberal party would grant self-government to Ireland. He also said the government would demand the limitation of the power of the House of Lords.

Representative Mann's bill looking to the suppression of the white slave traffic in the United States makes enticing a woman from one State to another for immoral purposes a felony punishable by a fine of \$5,000 or five years' imprisonment. The penalty is twice as great if the enticed person is under the age of 18 years.

Addressing the Iowa State Horticultural society, Dr. Samuel Bailey of Mount Aire, a member of the National Medical society, declared that apple-eating would kill the taste for cocktails and other strong drinks. He said it was the meat eaters who become addicted to strong drink and advocated fruit eating as a solution of the liquor problem.

It is said that the costs of the entire Texas litigation, criminal and otherwise, in which the Waters Pierce Oil Company and its directing officials have been involved, have cost the company practically \$2,500,000. The defense made by H. Clay Pierce in the criminal suit is presumed to have cost \$100,000. His leading Texas counsel received \$25,000.

An event of the greatest importance to the cotton trade is the expiration of the patent rights held in Germany on the large class of goods known as mercerized. American manufacturers of these goods hitherto have paid large royalties to the German owners of the process. American mercerizers can now go in for the oriental trade on an even basis with the Germans.

M. Bleriot, the French aeroplaneist whose flight across the English Channel was one of the most remarkable achievements of the year and who has had more narrow escapes from death than any other aviator, has met with another serious accident. He was giving an exhibition in the presence of an immense crowd in Constantinople when his aeroplane collided with a house. He was injured on the left side, and, it is feared, internally hurt.

The College Prohibition Movement is now thoroughly organized and at work in seventeen States and in 129 colleges, universities, theological seminaries, law schools and other institutions of higher education. Last year 50,000 college men and women were reached through this movement and many of them enlisted in the cause of prohibition. The organization is not in any way a party movement, but one of education for the accomplishment of the general welfare.

A library of over one score volumes treating on the banking and monetary systems of all the civilized nations is to be published during the coming year under the auspices of the national monetary commission. The works have been prepared by leading authorities in America, England and Europe and they supply information concerning the modern development of the financial systems of the world that at present is absolutely lacking in English banking literature.

Finnish statesmen look upon the appointment of Grand Duke Nicholasevich, a cousin of the Czar, as governor-general of Finland as the most overt action yet taken by Russia in her scheme of crushing out the last vestige of Finnish autonomy and of "Russianizing" the grand duchy. The Finns now realize that unless pressure from other powers is brought to bear there will be no way of checking Russia's plan and they have about given up hope of European intervention.

Notice has been served on jewelers that gold and silver coins must not be converted into jewelry, as it is a violation of Revised Statutes No. 5459 because the coin's identity is not completely destroyed. It is customary for jewelers to smooth coins and engrave monograms on the mutilated side. Edward J. McHugh, secret service agent, conferred with United States Assistant District Attorney Daves in regard to several cases discovered by him where coins had been smoothed on one side for engraving purposes.

The postoffice department has received notice from Great Britain, Rhodesia, Orange River Colony, and the Transvaal that hereafter they will not accept mail which bears upon it the Red Cross holiday stamp which is sold so extensively in this country at Christmas time for the benefit of consumptives. The stamps, it is alleged, cause confusion in the foreign offices. The State department is to take up the matter with these countries. Germany has agreed to admit the stamps, provided they are on the other side of the letter or package from the regular postage stamps. In Germany, Denmark, Sweden and some of the other countries such stamps have long been in use. Japan makes use of them, too. This action, however, will not greatly impede the sale of the Red Cross stamps, as most of them are used on letters sent to addresses in this country.

For the purpose of destroying the bugs and worms which are attacking crops of farmers in Mexico, Miguel Diebold, local consul for Mexico, has purchased for his government five tons of arsenic. The poison will be distributed through the Mexican agricultural department. It is the largest shipment of arsenic ever made in the United States, the wholesale druggists claim.

In order to stop the continued decrease in the population of France, Deputy Gauthier de Clagny advocated a bill to encourage parenthood by giving a bonus to mothers. The pro-Catholics lay the blame for the depopulation of France to the separation of church and state and the absence of religious instruction in the public schools. Statistics for the first half of the present year show 28,000 fewer births than during the corresponding period last year.

In the hope of checking the powers' plan to reform its methods of dealing with the Kongo natives, the Belgian government has hinted to Germany that it will not participate in an international conference on Kongo affairs. Belgium's move is cleverly taken, inasmuch as nothing in the way of reform can be accomplished without a revision of the Berlin treaty of 1885, which specifies that another change in its provisions must be approved by all the signatories. Belgium is thus in a position to block reform.

Emperor William opened the reichstag or imperial parliament at Berlin Nov. 29, and read a speech from the throne. Government money matters, said he, were improving; the German colonies were getting to be more nearly self-supporting, and it was now planned to extend the railway system in German East Africa to the great mountain of Kilimanjaro. The "dreibund" or triple alliance (Germany, Austria and Italy), he said, was still a strong combination, always on the watch to protect the interest of its peoples and yet maintain peace.

Sixty saloons will be put out of business in Siskiyou County, California, as a result of a special election which resulted in an anti-saloon majority of 165. The incorporated towns of Yreka, Fort Jones, Etna, Eisson, Dunsuir, Montague and Dorris are not affected. Plumas County, Sutter County and Yolo County, with the exception of Woodland and Washington, have recently voted "dry." All expenses of the election were defrayed by the Anti-Saloon League, the board of supervisors agreeing to be governed by the expressed will of the majority of the voters.

Secretary of the Treasury MacVeagh has issued a statement for the guidance of the officers of more than 400,000 corporations, which fall within the corporation excise tax provision of the new tariff act. The statement interprets the intent of the law, defines "net income" and "gross income," classifies corporations into six groups and sets forth just what the government expects. It says that some of the returns will doubtless be inaccurate, due to two causes—honest error or wilful intent to defraud—and it issues the warning: "Where fraudulent purpose is discovered, vigorous prosecution will follow."

The Astronomical and Astrophysical Society of America, through the chairman of its committee on comets, Professor George C. Comstock of the University of Wisconsin, has just issued a statement to astronomers throughout the country in regard to the observation of Halley's comet. A long and continuous photographic campaign, in

order to secure the best possible picture of the interesting visitor to the solar system is urged by the committee. As there is no observatory with proper facilities for photographing the comet in the large area of the Pacific Ocean, the committee is about to send an expedition to the Hawaiian Islands to photograph the comet during its greatest brilliance, which will be in May.

Nobel prizes of \$40,000 each are awarded annually to the persons who are considered to have conferred the greatest benefit on mankind during the preceding year. The prizes are provided by the will of Alfred Bernard Nobel, a Swedish engineer, who died in 1896. The winners this year are: For physics, divided between Mr. Marconi and Prof. Ferdinand Braun, of Strausburg; for chemistry, Prof. Wilhelm Ostwald, of Leipsic; for physiology or medicine, Prof. Theodore Kocher, of Berne; for literature, Selma Lagerlof, the Swedish authoress. The "peace" prize, has not yet been awarded.

After three months' work the special commission appointed by the President has completed a bill amendatory of the interstate commerce act. The bill provides for the creation of a commerce court whose decisions shall be final. Telephone and telegraph companies are made common carriers. The court may review and suspend or modify rates. It also, despite the Sherman anti-trust law, authorizes railroads to unite in fixing published rates. No road is allowed to buy or own stock in a competing line. Any officer assenting to the issuance of forbidden securities may be fined \$10,000 or imprisoned three years or both.

"The Beast in the Jungle" is seeking the blood of its author. Judge Ben B. Lindsey, author of the serial now running in Everybody's Magazine, is put on the defensive, being made defendant with Harvey J. O'Higgins, who collaborated with him in the preparation of the article, in a damage suit for \$50,000. Knowing that the famous founder of the juvenile court does not possess \$50,000, or any considerable part of it, the plaintiff in the suit, who happens to be tax agent for the tramway, asks that the judge be imprisoned for a year in the county jail. The suit against Lindsey is brought in the name of W. G. Smith, who alleges that he has been cruelly libeled.

Among the important recommendations, the President's message, which contains about 19,000 words, lays emphasis on the work that is being done by the administration to curtail federal expenses, recommends the immediate establishment of postal savings banks without waiting for the report of the National Monetary Commission, advocates the passage of laws to suppress the white slave traffic and the appropriation of \$50,000 to prosecute offenders, asks for an inquiry into our judicial system with a view to simplify it and making litigation less expensive, urges limitation of the powers of Federal courts in injunction cases, suggests that magazines be required to pay a higher rate of postage than is charged for newspapers, recommends that candidates for the House of Representatives and for other offices involved in elections over which Congress has control be required to file statements with the government showing their campaign expenses, suggests that Alaska be given a legislative council, to be named by the President, and which shall have power to make laws for that territory, urges the passage of a ship subsidy bill and recommends the admission as States of New Mexico and Arizona.

Among the Magazines

SAVING THOUSANDS A YEAR BY TRUSTING YOUNG THIEVES.

In the days before we got our Detention School, any boy sentenced to the Industrial School at Golden had to be returned to the jail to wait until a deputy sheriff could "take him up." I found that the deputies were keeping the boys in jail until there were several under sentence, and then making one trip and charging the county mileage on each boy. Petty graft again! And conditions in the jail were such as I have already described.

I tried to make the deputies take the boys separately, immediately after sentence; but I did not succeed. The grafters were protected by the politicians, and I was powerless. "Very well," I said, "I'll see whether I cannot send these boys to Golden alone, without any guard, and cut out your fees entirely." And I succeeded.

I took each boy into my chambers and told him that I wanted him to go to Golden. "Now," I would say, "if you think I'm making a mistake in trying to save you—if you think you're not worth saving—don't go. Run away, if you feel that way about it. I can't help you if you don't want to help yourself. You've been a weak boy. You've been doing bad things. I want you to be a strong boy and do what's right. We don't send boys to Golden to punish them. We do it to help them. They give you a square deal out there—teach you a trade so you can earn an honest living and look anybody in the face. I'm not going to bring a deputy in here and handcuff you and have you taken away like that. Here are your commitment papers. Go yourself and go alone—or don't go at all if you don't think I'm trying to help you and sending you there for your own good."

And invariably the boy went. In eight years, out of 507 cases I had only five failures. One of these was a boy who thought he was being followed and who ran away instinctively "to beat the game." Another was a boy who confessed that he couldn't "make it" because the route to Golden led him past his old "stamping grounds"; and when I gave him tickets over another route he made the trip successfully. A third was an hysterical youngster who got as far as the railroad station with an older lad, but broke down there and could not go on. None of the failures was outright; and none of the boys was lost. (During these eight years I am told the police lost forty-two "breakaways" who were never recovered.) And we saved the county several thousand dollars in mileage fees. —Judge Lindsey in December Everybody's.

HOW COLUMBIA GETS ON WITHOUT FOOTBALL.

It is four years since football was abolished at Columbia, and there are now no undergraduates left there who have known or seen the demoralizing influence of intercollegiate football. It is the unanimous testimony

of Columbia professors that the autumn weeks have now, for the first time, become quiet, orderly, and abundant in work. Previously serious academic work began after Thanksgiving. Football dominated everything until that day. The tone of the student-body has improved, and now on the university exercising ground, South Field, there may be seen every afternoon hundreds of young men actively engaged in sports, in games, and physical exercise, where, during the football period, there were but twenty-two rushing and tearing at each other, while a few score or few hundred stood on the side lines watching and cheering.

Football makes athletics impossible. Athletics cannot flourish until football is gotten out of the way. The rational and regular participation in outdoor sport by hundreds of students is an end devoutly to be wished for. It cannot be obtained, however, so long as the body of the whole student interest is focused on the gladiatorial struggle between two trained bodies of combatants, leaving to the students as a whole nothing to do but to watch. The alternative is between the real and the vicarious. Football for the mass of American students is a vicarious participation in athletics.

It is deplorable that Columbia's example has not been followed by other large institutions. President Eliot talked and thundered against football, but Harvard did not uphold him. Other college presidents have gone to the length of defending football as a moral agent. One hardly knows how to deal with men who take such an attitude. Columbia has gained for itself a proud pre-eminence by an act of conspicuous moral courage, good sense, and high intelligence.—From "Effects of Football Reform at Columbia," in the American Review of Reviews for December.

THE PRESIDENT'S IDEA OF A COLLEGE LEADER.

President Taft gave utterance to his ideal of the college president when he assisted the other day at the induction of Wesleyan's new executive. He was frank in going counter to a widespread notion that a college president should primarily be a good business man. This was not to be taken in disparagement of business men, he explained, but as pointing to some inherent incompatibility in the order of mind of the man of affairs and the scholar. It was business enough for the college president to see that his college should fulfil its function as a teaching institution. President Taft, who already had a personal acquaintance with this educator who comes to the East from a similar Western post, was present at the inaugural exercises in Middletown, Conn., on November 12, and said this:

"Dr. Shanklin, I am one of those 'who have advice and nothing else to offer.' I congratulate Wesleyan upon its new president. I have known of colleges thinking that

they need a business man for a head, a man who knew the value of a dollar and who knew how to get it. I am glad this is not the ideal for a college president. This is not an attack on business men, but it must be admitted that one who is a business man has limitations and these ought to exclude him from being a college president. The first requisite for a college president is that he must be a teacher. That is primarily his profession, and combined with that he must have executive ability, to possess the power of properly selecting men for the work of the institution. If he does not possess these qualities, he is not fitted to build up an institution, and a faculty for its work. I congratulate the Wesleyan upon their president, believing that in Dr. Shanklin they have found one who will fill to the fullest measure the requirements which I have described."

A similar line of thought was taken by Prof. William North Rice, the professor of geology, who, during the interregnum since ex-President Raymond ceased active leadership, has guided the university's career. He is reported by the daily press as saying:

"Whatever other influences may be felt in the life of college students, the primary and essential character of a college is that it is a teaching institution. The relation of teacher and pupil is the foundation upon which the whole fabric of the college is built. When the old universities of Europe kindled anew the light of learning in the Dark Ages, it was the fame of great thinkers and great teachers that caused the ardent youth to throng by thousands to those centers of learning. Vast endowments and stately halls were a secondary development. And today the title of a college to the love of students and alumni and to the support of the public rests upon the intellectual activity, the high scholarship, the aptness to teach, the loyalty to truth and to all high ideals, of the members of the faculty. Secondary to these are stately buildings, rich museums, and even well-furnished libraries and laboratories; and without these the college is dead—a body without the inspiring soul."—Literary Digest.

FEDERAL ECONOMY.

Lives there a man with memory so green that he can recall the time when party platforms did not pledge their candidates for office to promote economy in the administration of government. We doubt it. And yet economy, as the average man defines the word, has been as foreign to our government as an Eskimo is to the tropics. Neither promises or demands have been partisan; all the parties have promised and all of the people have united in the demand. The tendency all of this time has been to greater and greater extravagance. Congressional appropriations have grown faster than the nation has. In 1904, they amounted to 464 million dollars, in 1905 they were 467 millions, in 1906 they were 489 millions, in 1907, 549 millions, in 1908, 555 millions, and in 1909, 627 millions. Their revision, like that of the tariff, has been habitually upward. Up to 1894 our revenue was always in excess of ordinary expenditures. Since 1894 the revenue has exceeded the expenditures on six annual occasions and on nine occasions there have been annual deficits. In the years of 1881-4, inclusive, the total revenues for the 4-year period exceeded total ordinary expenditures by about \$483,000,000. In the last five years, 1904-8, inclusive, the total expenditures have exceeded the receipts by about \$12,000,000. So heavy have been the expenses in recent years, or since the early 90's, that the early excess of revenue over expenditures has been nullified and we find

total receipts of the government since its beginning, amounting to \$20,741,630,749 more than offset by a total of expenses aggregating \$20,825,050,821.

This result has in part been due to our loose system of adjusting the revenues. The executive and the legislative departments have each sought to place the responsibility on the other. Departmental chiefs have made their estimates of probable expense higher than was necessary because they expected congress to cut them and desired to save enough to provide a working margin. Our right hand consequently has never known what our left hand was doing. There has been no co-operation. And "in this way," as Secretary MacVeagh says, "the government arrived at the farthest extreme from a responsible budget." But we have at last reached the point where expenses are so greatly in excess of revenues that there is no prospect of making ends meet unless economy of the strictest sort is practiced. We have been sliding down hill for so many years that the present administration is unable to avoid economizing without involving itself and the government in disaster. And so—we might as well recognize the fact now as later—the great work of the Taft administration, the work on which Mr. Taft will go before the people as a candidate for re-election in 1912, will be the reduction of government expenses.

Economy is the watchword in Washington at last. And the best feature of it is that the foundation is being laid for permanent economy. Departments are being reorganized, old methods of transacting business are being overturned, provision is being made against duplication of work, and extravagance, waste, inefficiency and poor administration are being weeded out. The dollars thus earned are not only saved this year, but the saving continues as long as the system remains in force. The foundation laying is in the hands of an expert in business methods—a man who has been employed by many of the great corporations. He has only just begun his investigations and they will probably not be completed for two or three years, but step by step, bureau by bureau, department by department, he is progressing, wielding the pruning knife as he goes. This news is almost incredible, we confess, but whether we can bring ourselves to believe it or not, long accustomed as we have been to governmental waste and extravagance, it is nevertheless true. With our approval, or without it, the work goes steadily on and by next campaign time we may reasonably expect to find government economy a rival of conservation of national resources for honors as the "paramount issue" of the hour. —Woman's National Daily.

OREGON'S NATURAL ICE HOUSE.

IN Cook County, in the central part of the State, there is a cuplike formation in the earth at the bottom of which ice forms a floor of an area of some fifteen square feet. At one side of the chamber is a small tunnel, and if you crawl through this you will find yourself in another chamber of about the same size in which the ice likewise forms the floor. It is not muddy, dirty ice, either, but is nice and clean and wholesome, and a company mines it just as one would mine salt, and sells it in the neighboring town of Bend. At the top of the cuplike hole the temperature in the summer time often stands as high as 105, but about fifty feet down the freezing point is reached. It used

to be that cattlemen would dig the ice out and lift it to the surface, where it was melted for the stock, for the cave is in a very arid, volcanic region where water is scarce, but now a thriving business is done in mining the ice in great blocks.

Just what the process of manufacture here in nature's ice plant is is not known to man. The geological and geodetic surveys have made an investigation and have presented their theories, but it will never be positively known how the work is done until some one digs through the ice and the rock which subtends it and examines the condition of the earth deeper down; and this the owners of the ice mine are not likely to permit as long as they wish to make anything out of it, for just as a spring can be lost by digging into and around it so the ice laboratory might be put out of business. Blocks of ice weighing from 200 to 500 pounds are daily taken from the floors of these chambers, and by the same time next day the space is filled with the congealed water again.—*The Pathfinder*.

HOW THE CHIMES RANG

AN old legend says that there was in a city in Germany an old church in whose belfry were the most beautiful chimes in the world. No man or woman living had ever heard them ring, but each one had heard his father or grandfather tell of their wonderful beauty.

There was a belief among the people that the chimes would ring on Christmas Day if they brought their most precious gifts and laid them on the altar of the church. The king appointed the next Christmas for every man, woman, and child in the city to bring his gift.

First came the king and laid his crown upon the altar. The people gazed in wonder and sat waiting expectantly; for surely no gift could be more precious than the king's crown. But the chimes did not ring. Then a soldier came and laid his sword upon the altar, but the chimes did not ring. A woman brought a beautiful dress, all of her own weaving and laid it by the soldier's sword, but there was no sound from the old belfry. A maiden brought flowers, planted and watered by her own hand, but still the chimes did not ring.

Now there was in a distant part of the city a little boy named Peter, who for weeks had been saving a few small coins for his gift. It had been very hard to save them. But at last he was on his way with these, his most precious gift, to lay on the altar. He had nearly reached the steps of the church when a whine made him look down on the sidewalk. There in a doorway crouched a little dog with a broken leg. What should Peter do? It was getting late. If he waited to take the dog home and bind up his leg, the church would be closed and he would lose his little chance to

make the beautiful chimes ring. But another whine came from the dog. Peter took his hand from the pocket where the hard-earned money lay, picked up the dog in his arms and ran home as swiftly as he could. As he came to the door he called to his Brother Hans. "Hans, quickly, take the money and run back to the church. Quickly, Hans! it may be closed and the chimes have not been rung."

Then he set to work binding up the dog's leg. His little brother ran to the church. The western sunlight was throwing long shadows down the aisles as the people sat waiting, discouraged, hoping against hope as one gift after another was laid upon the altar and still the chimes were silent. Just as a few left their places to pass out, giving up hope, a tiny boy came panting, breathless, up the steps, down the long aisle, straight to the altar where he laid a few small coins.

Suddenly from out the long, silent belfry broke the most wonderful music—filling the church, the air, the city, with glorious harmony. People fell upon their knees in joy and thankfulness, men who had not prayed in years praised God, mothers held their little children more closely to their hearts. The whole city seemed caught up in heavenly melody and held close to the heart of God.

And from a window in a distant part of the city little Peter's face looked out, its great longing changed into great peace. His own small gift had made the chimes ring out at last.—*Selected*.

Between Whiles

A High Financier.

Little three-year-old Elner received a dime for taking a dose of castor-oil. The next day her big brother Fred asked her to pick up a basket of cobs.

"How much will you give me?" she asked.

"A nickel," replied her brother.

"Humph!" said Elner, "I can make more than that taking castor-oil."—*The Delineator* for November.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED.—Buyers for some good well improved farms near the following (Brethren's) churchhouse, Rockingham, Wacanda and Bethany, in Ray Co., Mo. Write me.—J. H. Shirky, Norborne, Mo., R. 4.

ON THE SWEET GRASS

J. F. Appleman and wife, Plymouth, Ind., and E. E. Arnold, Elgin, Ill.

Glass Brothers Land Company, Big Timber, Montana.

Big Timber, Mont., May 8, 1909.

Gentlemen: I have taken several days in looking over Sweet Grass County, Montana, and have looked over your irrigation project. I have been careful in my investigation, looking into the grain, stock and fruit raising, and must say that I am more than pleased with what I have found and wish to recommend same to my friends; and I also feel that anyone looking for a home should not wait until tomorrow, but go now as these lands will surely be sold in a short time on the liberal terms you are offering settlers. The lands and irrigation works are far better than you have told me.

Thanking you for your kindness, and wishing you success, I am,

Yours truly,

(Signed) J. F. Appleman, Plymouth, Ind.

Formerly State Superintendent of the Mexico (Ind.) Old Folks' & Orphan Children's Home.

Glass Bros. Land Co., Big Timber, Mont.

Elgin, Ill., Oct. 18, 1909.

Gentlemen: It was my pleasure to spend several days investigating your lands and irrigation project in Sweet Grass County, near Big Timber.

The longer I looked the better I was impressed with the possibilities of the country. Alfalfa fields were the finest I ever saw. Oats, wheat and other grains were in abundance. I am fully convinced that apples will grow to perfection there. Wherever orchards were seen the trees were full of perfect apples and not a wormy one could be found.

Your irrigation system is well constructed and my opinion is that it will supply more than ample water for your lands.

I was so well pleased with the conditions and possibilities of the country that I purchased 160 acres and propose to put a tenant on it and improve it, and also expect to put at least 19 acres in apples in the spring.

Persons desiring to better their conditions should investigate your lands. Your terms of sale are very liberal.

With best wishes, I am,

Yours very truly,

R. E. Arnold.

We invite you to investigate the possibilities of these lands.

For price, terms, etc., address,

GLASS BROS. LAND CO.

BIG TIMBER, MONTANA.

Words of Help and Cheer

Only a faint idea of the beauty of these cards is conveyed by the accompanying illustration. The text matter is attractively arranged and printed on a hand-made three-ply ripple board and artistically decorated in water colors by hand in violets or clover as designated in list. A plain white envelope of antique paper to match, is furnished with each card. Size of each card, 7x9 inches. Order by number.

Price, postpaid, each,25 cents

Read and Learn OF THE Great Future for Miami Valley in Apple Culture

ENORMOUS APPLE CROP

Cimarron Citizen—

While the apple crop in Colfax County this year is extraordinary heavy, it is not as great as it has been for several years past, still it is a fair average, and the apple output from the various orchards in Colfax County will be enormous. The orchard of M. M. Chase, north of town, is the largest in Colfax County, and it is estimated that he will raise this year the sum of 18,000 boxes of the finest apples grown in the southwest. Each apple box contains about a bushel of apples and sells from \$1.00 to \$1.75. A carload of apples consists of six hundred boxes, and from this it will be seen that Mr. Chase will produce thirty carloads of apples.

Mr. Charles Springer will have about three thousand boxes, and other orchards around Cimarron are doing equally well proportionately.

You may conclude from this what is the future in store for Miami Ranch when her orchards come into bearing.

Other crops do equally well.

At the Colfax County Fair held at Springer, New Mexico, October 22 and 23, Miami Ranch won first prizes on onions, cabbage, water melons, pumpkins and tomatoes.

One grower displayed three onions which grew together from one set, the total weight of which was 4 lbs. 7 oz. Eleven onions weighed ten pounds. Another displayed a radish which was 20 inches long and 19 inches in circumference.

Sugar beets now being shipped from Springer are netting the growers 50c more per ton than in the Arkansas Valley, because of the very high percentage of sugar. They are testing 16.6% while the average test in the Arkansas Valley is only 12%. This showing will hasten the building of a factory in this community.

You should own a farm in Miami Valley.

Write us and learn when you can get cheap excursion rates to Springer, New Mexico, via A., T. & S. Fe Rwy. to see Miami Ranch.

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.'"

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

No. 4922½.—Same as 4922, only holds 300 cards. \$1.50

CALIFORNIA HOMES

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. California appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"The Alfalfa shown above was cut five times this season, as follows, May 20, yield 8 tons, July 1, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.

J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.

C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, rates for homeseekers.

One Dollar Per Year

NEW YEAR SONNET

L. U. HULIN

Old Year, farewell and welcome to the New,
A loyal hand I freely offer you,
That willingly will strive to do and dare
When in life's conflict soldiers true are rare;
A hand that will the right assist,
A hand that will the wrong resist,
The weak make strong, the hungry feed,
The needy aid, the erring lead.
Within the saddest heart is room
For joy and love can banish gloom,
By every action point to Christ above,
Whose work on earth is wrought in deeds of love.
So may I strive that when my race is run,
To hear the welcome plaudit of, "Well Done."

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel.

THE TWIN FALLS COUNTRY

¶ The Twin Falls Country has the largest irrigation ditch in the United States, with practically an unlimited supply of water. ¶ The soil has proven to be of remarkable fertility and produces fruits, grains, alfalfa and garden truck with extraordinary success. ¶ The lands adjacent to Twin Falls are under the Carey Act, which of itself is of immense advantage to the homeseeker.

¶ The various projects in the Twin Falls Country contain over two million acres, as follows: The Twin Falls South Side project, 240,000 acres, The Twin Falls North Side project, 225,000 acres, the Salmon River project, 80,000 acres, the Kings Hill project, 20,000 acres; the Wood River project, 150,000 acres; the Goose Creek project, 50,000 acres; the West End project, 50,000 acres; the Twin Falls Shoshone project, 10,000 acres; the Dietrich project, 50,000 acres; the Twin Falls-Bruneau project, 1,000,000 acres; the Bruneau project, 80,000 acres; and the Minidoka Government project, 160,000 acres; all of which will be irrigated and which will be tributary to the City of Twin Falls.

Fruit and Sheep Ranch on the Banks of the Snake River, a Few Miles from the City of Twin Falls.

¶ Write us for printed matter giving full particulars about Idaho, and its possibilities, climate and other attractions. It will pay you to investigate.

No. 52.

"THE GRAND OLD MAN" OF ENGLAND

DALLAS B. KIRK

WILLIAM EWART GLADSTONE was born in Liverpool, England, of Scotch parents, December 29, 1809. This was the year that Robert Peel entered Parliament at the age of twenty-one. Young William attended his first school at Seaforth, and entered Eton in 1821, when eleven years old.

Roderick Murchinson said, "Gladstone was the prettiest little boy that ever went to Eton." Gladstone's closest friend here was Arthur Hallam, and among his other friends were Alexander Kinglake, James Bruce and Charles Canning.

Young Gladstone was an active athlete and a good debater in the Eton society. He was also editor of the *Eton Miscellany* which he had helped to start. He left Eton at the close of 1827. Next he studied under private tutors until October 28, 1828, when he entered Christ Church College, Oxford.

Gladstone founded and named the Oxford Essay Club, then often spoken of as the "Weg," from the founder's initials. He was secretary, and afterwards president of the Union Debating Society. He studied long and hard and did much reading before bedtime. He said of books: "Books are delightful society. . . . They seem to tell you that they have got something inside their covers that will be good for you, and that they are willing and desirous to impart to you. Value them much. Endeavor to turn them to good account."

Gladstone was a close student of the Bible and of Hebrew while attending college and noted for his regular attendance at church which he kept up during his busy life. He graduated with high honors in 1831, gaining a noble distinction in classics and mathematics.

He now spent six months in Italy. Gladstone was elected to Parliament by the Conservatives in 1832. This was the commencement of his public career. The Reform Bill of this year took the power away from the rich and placed it into the hands of the common people. In 1834 Gladstone was appointed Lord of the Treasury by Sir Robert Peel. About this time he

published his first book entitled, "The State in Its Relation With the Church." It shows the author's view on this vital question and proves that he was always on the lookout for new fields of labor.

Gladstone was married to Miss Catharine Glynne in Hawarden Castle, July 25, 1839. The following year, February 10, the English queen, age twenty-one, was married to Prince Albert of Saxe-Coburg-Gotha.

Gladstone was made vice president of the Board of Trade 1841. In 1842 some great fiscal reforms were inaugurated; some being traced directly to Gladstone. In the winter of 1845 he injured the first finger of his left hand by the exploding of his gun while he was loading it. The finger had to be taken off and always afterward he appeared with a black ribbon around his hand.

Gladstone and Peel worked together for the repeal of the Corn Laws but it cost Gladstone his seat from Newark. He delivered a retiring address in 1846, but appeared again in the House of Commons in 1847. With the exception of one and one-half years he sat continuously in the House from 1832 to 1895. In April, 1850, Catharine J., daughter of Mr. and Mrs. Gladstone died, aged about five years. This was the death angel's first visit into this happy household and he left very sorrowful hearts. Now Gladstone and family went to Naples, which resulted in the publishing of the *Neapolitan Letters* (1850) which stirred the civilized world. Sir Robert Peel died this year, aged only sixty-two. In 1851 Lord Palmerston was dismissed from office and when he died in 1865 it left Gladstone in full power. Gladstone became Chancellor of the Exchequer in 1852. The statesman made use of quotations from Homer, Dante, Schiller and Goethe, adapting them to carry his arguments. Macaulay, the historian, and Edward Bulwer, the novelist, were members of the House at this time.

The remarkable ability of Gladstone as a financier was shown when he attacked Disraeli's Budget of

1852. This was the beginning of a lengthy Parliamentary duel between the Earl of Beaconsfield and Gladstone, which lasted until 1876 when the Tory government was defeated. Gladstone began life a Tory and slowly turned into a Radical while his opponent turned in the opposite direction.

Educationally these two men were extremely different. Gladstone studied to learn something of everything, while his rival did not try to possess such a varied knowledge. Disraeli made use of much sarcasm while Gladstone's replies were serene and dignified. Disraeli is noted as a novelist; his speeches could be likened to a meteor, while visible, of great brilliancy, but soon forgotten. He died in 1881.

Gladstone delivered a speech at the unveiling of a statue to Peel in 1853. In 1854 war was publicly announced between Crimea and England. Gladstone was opposed to this war. He intelligently opposed the Divorce Bill of 1857. To listen to him was to imagine one's self listening to a theological discourse by some divine.

Gladstone's "Studies of Homer" appeared about 1858. He became at this time High Commissioner Extraordinary of the Ionian Islands. Gladstone and Bright did much toward the reforms now as well as later. John Bright was a staunch supporter of Gladstone in and out of Parliament. Being of Quaker descent he opposed war and large standing armies, and was an enlightened statesman for his time.

The Northern States were greatly disappointed during the American Civil War, when Gladstone in a speech favored the South although he had not such a wide knowledge of America as Bright, Mill and Cobden. However he acknowledged his mistake after a standing of five years. He was a supporter of popular suffrage. In 1868 the abolishing of the Compulsory Church Rates was due to Gladstone. He became a premier this year on the Liberal side. Victoria was the first constitutional sovereign who acted upon the advice of the Prime Minister, Gladstone. The taxes on education were repealed about this time. Gladstone denounced the Bulgarian Atrocities, the Afghan War, and the Anglo-Turkish Treaty during Lord Beaconsfield's tenure of office. During his Midlothian Campaign he delivered a speech, "On the Domestic and Foreign Affairs of England." This oration is worth a careful study. His speeches both in and out of Parliament were pronounced by his opponents as "wonderful and awe-inspiring." Gladstone ranks with the distinguished list of statesmen which includes our Henry Clay and Daniel Webster.

He opposed the annexing of the Transvaal Republic and thought that the English nation had no right to interfere with the industrious Boers.

Gladstone's second Irish Land Bill became a law in 1881 and the year following "A Prevention of

Crimes and Arrears Act" for Ireland was passed. He became converted to the Irish Home Rule Bill in 1885. The next year Gladstone again came into power over Lord Salisbury. He resigned on March 2, 1894 at the age of eighty-five. Stephen G., a son, is a minister. Gladstone addressed a meeting in Liverpool for one and a half hours on September 14, 1896. But he was not able to go to London and take part in the Queen's Jubilee held there in 1897.

January 5, 1898, there appeared in the *Daily Telegraph* a lengthy article entitled, "Personal Recollections of Arthur Hallam." It was nearly four columns long, and was a reprint from *The Youth's Companion*, Boston, Mass. The statesman was a highly valued contributor to this American paper. "In Memoriam" by Tennyson was also dedicated to Hallam. The fact that Gladstone and Tennyson each paid a loving tribute to their departed friend shows the lasting impressions that Arthur Hallam had made upon the greatest statesman and the greatest poet of the Victorian age.

A portion of Gladstone's last days were spent at Cannes, on the Riviera. But he finally returned to Hawarden Castle where he died on Ascension Day, May 19, 1898, at the advanced age of eighty-nine.

He was buried in Westminster Abbey with a state funeral, May 28, 1898. John Hay, representing the United States, was there. December 29, 1909, marks the one hundredth anniversary of Gladstone's birth.

Our reverence for his memory as a true, noble and upright statesman and a Christian father is unbounded.
Rockton, Pa.

HALLEY'S COMET.

S. Z. SHARP.

COMETS constitute one of the three classes of the heavenly bodies which adorn the sky on a cloudless night. They are peculiar in form and varied in times of appearance. Before their nature was understood and the law of gravitation discovered by Newton which controls them as well as every other heavenly body, it was supposed that they were signs of some great public calamity and brought terror and consternation on nations as well as on individuals. So great was the fear of these harmless visitors that sometimes great armies were demoralized and wars abandoned. When the law of gravitation was discovered by Sir Isaac Newton in 1667 or rather was demonstrated by him, then it was made possible to prove that comets were not wild untrammelled wanderers, let loose among the other heavenly bodies, but like planets, had their regular orbits around the sun, around which they made their periodical visits and then went back into unfathomable space to return again at their regular time.

A comet is considered as having three parts,—the *nucleus* or bright dot in its head, the hair like mass that surrounds the nucleus and is called the *coma*, and

the *tail* which is but the continuation of the coma in a more rarefied form, always on the opposite side from the sun and sometimes extending millions of miles in length.

It was in December, 1681, that Prof. Edmund Halley set out to make a tour through Europe and when near Paris he discovered the comet which since bears his name. By the demonstration of the law of gravitation made by Sir Isaac Newton, Prof. Halley was enabled to calculate the orbit of this comet and predicted its return. So elated was Halley over the laws which Newton had formulated that, at his own expense, he published Newton's "Principia."

Halley was born near London, England, Oct. 29, 1656, and died near Greenwich, Jan. 14, 1742. He was graduated at Queen's College, Oxford. As a student he distinguished himself as a mathematician and an astronomer. He discovered the variation of the magnetic needle, published his method of finding the longitude at sea, and drew up tables for computing the places of the planets. He filled the chair of astronomy at Oxford and carried on the observations in the Observatory at Greenwich. He was regarded as one of the foremost astronomers of his age as well as a philosopher, a naturalist, and an all-round scholar.

According to Halley's Calculation, this comet reappears in about every seventy-four or seventy-five years. Its last appearance was in 1835, seventy-four years ago. And by referring to history it will be seen that such a comet had appeared a number of times at such a distance apart or in 1456, 1531, 1607, 1682, 1758, 1835, leaving no doubt as to the correctness of Halley's predictions.

Exact astronomy has calculated its speed at this time at 60,000 miles an hour and by April it will have reached a speed of 100,000 miles an hour. It will then have approached within 13,000,000 miles of the earth, being about its nearest approach and should not give any one much of an alarm. Even should it strike the earth, the comet would get the worst of it. It is claimed that in 1864 the earth passed through the tail of a comet and many will remember that during the months of July, August, and September of that year there was a haze in the air much in appearance like smoke. It is claimed that the tail of a comet is composed of very minute meteoric particles which have the quality of being repelled by the sun; though following the nucleus they are always on the side farthest away from the sun.

In 1858 when all great astronomers had trained their large telescopes upon that part of the heavens where it was supposed the comet would first appear, all striving for the honor of making the first discovery, they were greatly chagrined when a Saxon farmer, George Palitch by name, by means of his small tele-

scope saw it on Christmas eve of that year and announced his discovery.

Halley's Comet was first seen this year at Kiel, Germany, on Sept. 11, and photographed by Wolf at Heidelberg on the night of Sept. 11. Sept. 12, 13 and 14 it was seen and photographed at the Lick Observatory. Prof. E. B. Frost, director of the Yerkes Observatory, Chicago, states that Halley's Comet was observed visually on Oct. 24. As the comet approaches it is steadily brightening and on the night of Nov. 5 it was discovered at Goodsell Observatory as a small round object and was also photographed. During November the course of the comet has been steadily westward along the north boundary of Orion to the Hyades. In the first days of December it will pass through the Hyades and during the rest of the month and through January, February and March it will continue to move westward, through Taurus, the head of Cetus, and Pisces.

It is not certain just when it will be visible to the naked eye, but not likely before February or March. In this respect the writer is favored above the readers of this article. We happen to have in Fruita a mechanical genius in the person of Dr. J. M. G. Beard who not only made his excellent automobile, constructed a number of first class X-ray machines and secured patents for improvements on them, but has constructed a powerful telescope and mounted it with all its delicate fixtures. By the doctor's courtesy we expect to watch the approach of the comet, and if the Pope will not issue a bull against it and we see there is danger of a collision with the earth, we expect to give the readers of the INGLENOOK due notice. Better get your friends to subscribe for this paper that they may be informed of any approaching danger. It seems almost certain that the earth will pass through the tail of the comet on May 18. And for several mornings before and several evenings after that date the comet will be a magnificent object in the heavens.

To find the place in the heavens to look for the comet, take the middle star in the belt of Orion, draw a line to the left through Taurus, the head of Cetus and Pisces. Any map found in a book on popular astronomy will help you.

Fruita, Colo.

MAPS MADE OF JEWELS.

THE jeweled map of France, owned by the Emperor of Russia, is a rare mosaic of precious stones that has no equal anywhere. In it Paris is represented by an enormous brilliant, Marseilles by an emerald, Bordeaux by an opal, and so on, each town or city being indicated by a gem of the average value of 30,000 roubles. Each province or department of the republic is shown by a special stone, the entire map presenting a glittering array of gems of every hue.—*San Francisco Argonaut.*

Historic New England

T. H. FERNALD, BELFAST, MAINE

Chapter VII.

THE Colonists were all Protestants, but the intolerant religious spirit of the earlier days had somewhat moderated. The people had become truly American in manners and customs. Massachusetts, Rhode Island, and Connecticut had chartered governments while New Hampshire was directly subject to the crown. Agriculture was the main dependence of the people, although manufactures had at this early period received some attention. Hats, paper, shoes, household furniture, farming tools, and coarser kinds of cutlery were made to some extent. Cloth weaving had been introduced, the most thrifty people weaving their own cloth. For many years money was scarce. In 1635 musket bullets were made to pass in place of farthings (English money being used wholly), the law providing that not more than twelve should be used in making one payment.

Most of the books of these days were collections of sermons. The *Boston News Letter* was the first permanent newspaper published (1704). The first stage route was between Providence and Boston and took two days for the trip. A postoffice system had been established and mail was started in 1672 between New York and Boston via Hartford. The round trip was made once each month. The *New England Courant*, a newspaper, was soon after published by James and Benjamin Franklin. It was a free-thought sheet and exposed rascality wherever found. Benjamin Franklin, one of the first postmaster-generals, made a tour of the country in his chaise, perfecting and maturing the postoffice plan. His daughter Sally accompanied him, sometimes riding by his side in the chaise, and at other times on an extra horse which he had with him. The rounds were made in five months. At the present time they could be made in less than five days.

As shipbuilding was now well established (1738) there had been more than forty-one sailing vessels, with an average tonnage of one-hundred and fifty tons, built and launched in Boston. We all know this was done against the orders of the "Mother Country."

New England had now become the seat of the principal manufacturing interests, but the British Board of Trade checked everything of this kind, and the restrictions acted as a damper on all colonial

thrift and enterprise. A young and prosperous company of New England men would just get established in an enterprise when this "Board" would interfere and success would be impossible. England became jealous of the American Colonists and the success of any Colonial enterprise before the Revolution was against the will of Great Britain.

In the Massachusetts Colonies a man who did not bear a good reputation and own property could not keep a tavern. All drunkards' names were published in the alehouses and keepers were forbidden to sell to them. By order of the Colony of Connecticut no person under twenty years of age could use any tobacco without a physician's orders; and no one was allowed to use it oftener than once a day, and then not within ten miles of any house. Articles of dress were also limited by law. No person whose estate did not exceed two hundred pounds could wear gold and silver lace, or any lace above two shillings per yard. The selectmen were required to take note of the apparel of the people, especially their "ribbands and greate boots."

The severe Puritanic laws of Connecticut were called Blue Laws, and were as near as we are able to ascertain, as follows:

"The governor and magistrates convened in general assembly are the supreme power, under God, of the independent dominion. From the determination of the assembly no appeal shall be made.

"No one shall be a freeman or have a vote unless he is converted and a member of one of the churches allowed in the dominion.

"Each freeman shall swear by the blessed God to bear true allegiance to this dominion and that Jesus is the only King.

"No dissenter from the essential worship of this dominion shall be allowed to give a vote for the electing of magistrates or any officer.

"No food or lodging shall be offered to a heretic.

"No one shall cross a river on the Sabbath but authorized clergymen.

"No one shall travel, cook victuals, make beds, sweep houses, cut hair or shave on the Sabbath Day.

"No one shall kiss his or her children on the Sabbath or feasting days.

"The Sabbath Day shall begin at sunset Saturday.

"Whoever wears clothes trimmed with gold, silver or bone lace above one shilling per yard shall be presented by the grand jurors and the selectmen shall tax the estate three hundred pounds (\$1500).

"Whoever brings cards or dice into the dominion shall pay a fine of five pounds (\$25).

"No one shall eat mince pies, dance, play cards or play any instrument of music except the trumpet, drum or jewsharp.

"No gospel minister shall join people in marriage. The magistrate may join them, as he may, do it with less scandal to Christ's church.

"When parents refuse their children convenient marriages, the magistrate shall determine the point.

"A man who strikes his wife shall be fined ten pounds (\$50).

"A woman who strikes her husband shall be punished as the law directs.

"No man shall court a maid in person or by letter without obtaining the consent of her parents; five

would float upon the water, and he told of many animals which were evidently related to the jabberwok.

In the Colonial days the titles "Mr." or "Mrs." were given only to the gentry, and ministers and their wives. "Goodman" and "Goodwife" were the titles given to others who were above servitude.

Carpets were hardly known before 1750 and the pride of each housewife was her white sanded floor.

Many of the customs which came from the Dutch at New York still remain with us, such as the New Year calling, the Christmas visit of "Santa Claus," colored eggs at Easter, and doughnuts, crullers and New Year's cookies.

The Puritans prized education next to their religion. Boston when only six years old made an appropriation of \$2,000 to the Seminary at Cambridge, now known as Harvard University. Some years after each family gave a peck of corn or a shilling in money to support it. Common schools had been provided at even an earlier date, and in 1665 every town had its free school, with a grammar school in towns containing over one hundred families.

In 1700 ten ministers having previously agreed, brought a number of books, saying as they laid them down: "I give these books for founding a college in Connecticut." This was the beginning of Yale College, which was first established at Saybrook, but in 1716 was removed to New Haven. It was named for Gov. Yale who had befriended it most generously.

In Connecticut every town that did not hold school for three months was heavily fined. The

"town meetings," as they were called, were of great value in creating democratic ideas. Old and young, rich and poor, met there on a perfect equality for the discussion of local questions. In Hartford, every free-man who neglected to attend town meeting was fined sixpence, unless he could give a good excuse.

New England from the first had led in this great principle. Free schools were found in every village and hamlet from the Penobscot to the Hudson. Each town or district furnished its own facilities for this purpose. So complete and universal were the means of education that there was said not to be an adult born in New England who could not read and

West Brookfield, Mass. The Old Indian Burial Ground—1640.

pounds (\$25) penalty for first offence, ten pounds (\$50) for the second, and for the third imprisonment during the pleasure of the court."

These were not really laws but selections from the decisions of the judges. They were printed on blue paper and from this got their name.

It is claimed that these "Blue Laws" never really existed. The story of these laws was first told by a Tory refugee in London, Rev. Samuel Peters, who delighted in horrifying the British with tales of wholesale tarring and feathering by the patriots of the Revolution. Dr. Peters reminds one of Baron Munchausen as to his truthfulness. He declared that the river at Bellows Falls flowed so fast that iron crowbars

write. If the narrowness and bigotry in religious matters of the Puritans was great, its record on the question of education should be written in letters of gold. It is true that the general education of the people situated as they were during the first half of the eighteenth century, was simple as compared with the universal instruction of such people as now inhabit these same States.

The Colonists believing "every man's house is his castle," resisted the power of English petty custom-house officials to enter their homes and stores at will and search for smuggled goods, with warrants from the King, as a violation of their rights, and brought the matter before the general court at Boston, where James Otis, advocate-general, came out boldly for the Colonists, exclaiming: "To my dying day I will oppose, with all the powers and faculties God has given me, all such instruments of slavery on the one hand and villany on the other." "Then and there," said John Adams, who was present, "the trumpet of the Revolution was sounded."

The people agreed not to use any article of British manufacture. The newspapers of the day gave names of many wealthy people who conformed to this agreement. On one occasion between forty and fifty young women, calling themselves the "Daughters of Liberty" brought their spinning-wheels to the house of Rev. Mr. Moorehead in Boston, and during the day spun two hundred and thirty-two skeins of yarn and presented them to the pastor. "Within eighteen months," wrote a Newport, R. I., gentleman, "four hundred and eighty-seven yards of cloth and thirty-eight pairs of stockings had been spun and knit in the family of James Nixon of this town." In Boston and Newport the ladies, at their tea-drinkings used the dried leaves of the raspberry instead of imported tea, and this substitute they called "Hyperion." The class of 1770 at Cambridge took their diplomas in homespun suits.

Associations of "Sons of Liberty" were formed to resist the Stamp Act in 1765. Delegates from nine of the Colonies met at New York and framed a Declaration of Rights, and a petition to the King and parliament. November 1, when this act was to take effect, was a day of general mourning. Bells were tolled, flags put at half-mast, and business suspended. At Portsmouth, N. H., A coffin inscribed "LIBERTY, aged CXLV years," was carried to an open grave. With drums muffled and solemn tread, the procession moved from the State House. Minute guns were fired till the grave was reached when a funeral oration was pronounced and the coffin lowered. Suddenly it was proclaimed that there were signs of life, and the coffin was raised. A new inscription, "LIBERTY REVIVED," was appended. Bells rung, trumpets sounded, men shouted, and a jubilee followed.

The English government became frightened and repealed the Stamp Act, but declared its right to tax the Colonies, and new taxes were levied upon tea, glass, paper, etc. A Board of Trade was established in Boston to act independently of the Colonial assemblies. British troops were sent to enforce the laws. The "Mutiny Act," so-called, aroused burning indignation in the Colonies by its attempt to enslave them. "It was bad enough to be enslaved but to feed and house their enemies was unendurable." The Massachusetts Assembly sent a circular to the other Colonies urging a union for redress of grievances. Parliament, in the name of the King, ordered the assembly to "rescind its action," which was unanimously refused.

New England contributed to the original thirteen colonies Massachusetts, Rhode Island, Connecticut, and New Hampshire. Massachusetts at the time of the breaking out of the War for Independence contained more than 200,000 people, and was the strongest of the Colonies.

In New England, especially Massachusetts and Connecticut, the principles and practices of the Puritans prevailed, and were universally recognized as the foundation of good society. Though the church was the power over secular society, yet its tyranny was not so absolute and galling as it had been. The general bearing of society was against the Moravians, who were, like the Quakers, made objects of persecution, especially by the Catholics of Connecticut. They were charged with inciting the Indians to hostility, and other alleged crimes were made against them and they became hated and abused. They refused to take an oath on religious scruples, which was made an excuse for passing laws prohibiting any person living in the province who refused being bound by such laws. The Moravians were attacked in the most inhuman manner and with blows driven from their fields, their homes, and workshops. Intolerance did its work, and bigotry was increased to the insecurity of society.

A BEAUTIFUL LEGEND.

LUELLA G. FOGELSANGER.

A BEAUTIFUL legend is told about the great canyons in Switzerland. On the side of a mountain Nature in a playful mood formed with rocks the features of a great face. The features could not be seen distinctly except at a distance, when they would stand out clearly, and appear majestic and godlike. The people in the valley grew to love this great stone face. They attributed the fertility of the valley to its kindly beaming aspect. One little boy was peculiarly impressed by it. As he sat on his mother's doorstep he could see the kindly visage beaming upon him from the distance. The boy loved the face, and he imagined it returned his affection. The face seemed to him to be the glow of a

great warm heart. It was so tender, kind, noble and lovable thought the little boy. Thus pondering on the attributes the face seemed to express, his soul gradually became good and noble. His own face came to have the same expression as the gigantic one in the distance.

A story had been murmured by the mountain streams and whispered by the winds, that some day a child would be born in the valley who was destined to become the greatest and noblest man of his time. Many times the village folk were deceived by men who returned to their native village, great in the eyes of the world, but small in the eyes of God. Their names were great, but their souls were small.

The little boy who had seen so much sympathy, kindness and love in this face, grew to manhood with the majestic features ever before him. He was a quiet, unobtrusive boy, and much loved by his neighbors and friends. One day as he was, in his simple manner addressing a crowd of people, his face became illumined by his emotions, and some one cried, "Look, he is the very image of the great stone face." Sure enough, there in the distance was the Titanic face, and here before them was the very image of it.

Hawthorne heard this legend and its spiritual significance appealed strongly to him. He has given us the beautiful story in matchless English, entitled *The Great Stone Face*. It is an American masterpiece. Every boy and girl should read this tale for its excellent style, and for the spiritual truth it contains.

What we think, what we read, what we hear, has much to do with the forming of our characters. We are forming a mould into which our minds are cast. If our thoughts are pure and noble, if we read choice literature, if we talk about the good and beautiful, our souls will become more beautiful each day. Our lives will be the outward expression of our meditations.

So may our faces reflect souls that may be an inspiration to others, even as the Great Stone Face was an inspiration and ideal to little Ernest. No one can become purer and stronger without influencing many others, so in realizing our ideals we are making all life better. Owen Meredith has said, "No life can be pure in its purpose and strong in its strife, and all life not be purer and stronger thereby."

Elizabethtown, Pa.

SOME AMERICANS OF ACHIEVEMENT

O. H. KIMMEL

Dr. Samuel Francis Smith.

WE all sing "America." We do not remember when we learned it, but like Dodd Weaver with the A B C's, we always knew it. It has been sung in the home and in the school, at church, at entertainments, at celebrations—sung everywhere ever since we can remember, and who is there in all America who does not love this song? It is a song that is sung in the primary school and in the high school. A song for the Southland, for the snow-capped Northland, for the traditional East and the golden West of our great stretch of country. It is an anthem for any occasion, for all occasions. It is a song as simple as nature, yet broad and classical enough in its scope for the most technical. In fact it is a song for America, and for all that America stands for, and no matter where the strains of "America" are started, soon a chorus is singing:

"My country! 'tis of thee,
Sweet land of liberty."

The author of this song, Dr. Samuel Francis Smith, was a minister and educator in Massachusetts who gave some of his time to the composition of hymns. He was born in Boston in October, 1808. He studied at Harvard and Andover, and for a time was professor

of modern languages at Waterville, Maine. In 1842 he removed to Newton, Massachusetts, where for a period of seven years he conducted the *Christian Review* and wrote hymns.

Dr. Smith was an earnest worker and a good man whose greater energies were bent on his life's work. He wrote quite a number of hymns, but this work was done in his recreation hours when he listened to the muse. So, we remember him, not for the work which took his great energies, and consumed his vitality at last, but for the work he did in response to the call of the muse. We think of Dr. Smith when the stirring lines of "The Morning Light Is Breaking" are being sung in revival service, but we think of him most when that little classic, "My Country 'tis of Thee," is being sung, though this was composed while he was yet a student at Andover, in 1832. This is the little work that has made the name of Dr. Smith immortal. It is this little anthem that is sung all over this country, and it is this little anthem that follows the stars and stripes all over the world. It is said that an American traveling in a foreign country who has forgotten to carry along the American flag to look upon when he hums America is lonely indeed. It is this little song

that follows us in our national life wherever we may drift.

An enthusiastic reception was given the author in Music Hall in Boston April 3, 1895. On that same day the school children in all America sang "America" in his honor. This just praise was given him in glad refrain which was heard throughout the land. The nation formally showed its appreciation for the life in song that he had given to it. And it did not act too soon, for on the sixteenth of the following November the grim reaper came and claimed him as his own, and Dr. Smith was given over to the ages.

Some people are wont to criticise this anthem. Some say that it is not wholly American, that in part it was copied from a European air, which is true. Others say that it is not as attractive either in phrase or music as our national air should be, while still others say that it is entirely too plain and simple to express all that a national air should express. But while the critics are talking the great mass of the people sing the song and love it in its plainness and its natural simplicity. The critics criticise, but they produce no song that will take its place. Some songs have been written and sung which were designed to take its place, and though they were beautiful songs, the great mind of the nation soon tired of them and went back to "America," where in all probability it will stay. It is true that it is not wholly original, and that it is not wholly American. Of course it is not. Nothing is wholly original, and no music in America is wholly American. America is too young in national life as yet to even have national traditions and national characteristics. It has no original literature independent of Europe; it has no complete line of thought and philosophy independent of Europe; it has no governmental traditions entirely independent of Europe; and it has no music entirely given over to its own developing traditions, so that criticism is surely hastily given. An any rate, whatever the critics say, the people are singing "America" with greater enthusiasm, and "America" is recognized as a classic in literature and song, for, after all, classics are made by the people and not by the critics. And such is "America."

This anthem stands as the crowning work of Dr. Smith. It stands as a living monument, beaming out as a silver crown of all his work here on earth. It is an expression of simplicity and patriotism, of loyalty and love to one's country that cannot be imitated, that has not been improved upon and that will never die in the hearts and minds of the American race. As this nation shapes its traditions and characteristics, it will shape them around this song and under the stars and stripes of our national banner, and through it all the name of Dr. Smith will stand as immortal because it was he who composed this anthem.

America.

My country! 'tis of thee,
Sweet land of liberty,
Of thee I sing;
Land where my fathers died!
Land of the Pilgrims' pride!
From every mountain side
Let freedom ring!
My native country, thee—
Land of the noble free—
Thy name I love;
I love thy rocks and rills,
Thy woods and templed hills;
My heart with rapture thrills
Like that above.

Dr. Samuel Francis Smith.

Let music swell the breeze,
And ring from all the trees,
Sweet freedom's song;
Let mortal tongues awake;
Let all that breathe partake;
Let rocks their silence break,—
The sound prolong.
Our fathers' God! to thee,
Author of liberty,
To thee we sing;
Long may our land be bright
With freedom's holy light;
Protect us by thy might,
Great God, our King.

SILK MANUFACTURE.

JOHN H. NOWLAN.

AFTER the chrysalids have been killed the cocoons are sent to the reelers or filatures. A number of cocoons are placed in a basin of hot water which softens the gum that sticks the threads together. The operator brushes the cocoons with a small broom to the threads of which the fibers become attached. After the outside fibers are removed and the thread runs free, just as you would unwind a ball of yarn, the ends are collected together and wound upon a reel. As the silk cools and dries the gum hardens and fastens the fibers into one smooth thread, the size depending upon the number of cocoons used. The finest sizes reeled are but little coarser than a spider's web. Three thousand cocoons will yield about one pound of silk fiber which would reach seven hundred miles.

The silk in this state is known as reeled or raw silk. It is wound into hanks or skeins of 400 French ells—520 yards. The size is denoted by the denier, $533\frac{1}{3}$ deniers being equal to one ounce. An 8-10 denier silk runs 491,000 yards to the pound, or a pound would stretch 297 miles. It is seldom reeled coarser than 28-30 denier which runs 150,000 yards per pound. The number of deniers that one hank weighs is the count of the yarn.

Very little raw silk is produced in the United States. The writer has known quite a number of persons who have gone into the silk industry, but can not now recall a party who made a second attempt.

We import most of our raw silk from Italy, China and Japan. It is handled first by the throwster, who winds it from the skein and makes various kinds of threads for the different purposes.

Raw silk wound on spools in a single thread and called singles is often used to make warps (the threads running lengthwise of a piece of goods) for piece-dyed goods, which are woven with the gum in the silk and afterwards boiled out and dyed. In very thin goods singles are sometimes used as filling, which is the threads running across the goods.

For yarn-dyed goods organzine is usually used. These goods are made of yarn which is dyed before weaving.

Organzine is raw silk wound, then twisted in the singles, two or more strands put together, twisted in the reverse direction, then reeled into skeins for dyeing.

Tram is used for filling of either yarn or piece-dyed goods, and also in piece-dyed goods it is sometimes used for the warps. Tram is raw silk wound two, three or more threads put together and twisted, usually rather slack.

Crepe yarn, used in making crepe, in chiffon and other purposes, is a hard-twisted thread, generally tram, from forty to eighty turns to the inch.

Floss silk is a very slack-twisted tram composed of a large number of singles.

Embroidery silk is made by winding the raw silk, putting a large number of ends together, giving them slack twist, doubling and twisting in the reverse direction with a slack twist.

Sewing silk is made by winding and doubling the raw silk, twisting into tram, hard twisted, doubling and twisting in the reverse direction, drawing the thread tight at the same time that it is twisted. Machine silk is the same, only three strands are used instead of two.

Perhaps you think that there would be much waste in the course of the manufacture of the various threads. All the cocoons from which the moth has emerged by breaking the fibers at one end of the cocoon, the fibers taken from the cocoons in the production of reeled silk and the waste in manufacture are used to make spun silk. The waste silk is ungummed, that is, it is boiled in soap and water, after which the chrysalids are picked from the cocoons.

The silk is then combed, lapped, put through a number of drawing frames to get the fibers even, next to the roving frames where it takes the form of thread, and then to the spinning frames where it is twisted. It is now singles. If two or three ply yarn is to be made, the singles are doubled, twisted again, run through a gas flame to remove the loose fibers, the knots and lumps are taken out (controlled), and then reeled into skeins for dyeing, or spooled.

The system of numbering used most in this country is the English method. The hank is 840 yards and the count of the yarn is the number of hanks in a pound avoirdupois. Thus, No. 50 thread has fifty hanks to the pound, each hank being 840 yards, or 42,000 yards to the pound.

Weaving of silk is the same as of any other goods—by means of a loom. Ribbons are woven several pieces in one loom with a separate shuttle for each piece.

Teachers who are teaching commercial geography can at little cost secure samples which will be both interesting and instructive.

Mulberry Grove, Ill.

THE ONLY EASY PLACE.

HENRY WARD BEECHER once received a letter from a lad, asking him to find "an easy place." This was his reply: "You cannot be an editor; do not try the law; do not think of the ministry; let alone all ships, shops, and merchandise; be not a farmer nor a mechanic; neither be a soldier nor a sailor; don't work, don't study, don't think. None of these are easy. Oh, my son, you have come into a hard world. I know of only one easy place in it, and that is the grave.—*The Methodist Protestant.*"

NATURE STUDIES

THE DOGWOOD FAMILY.

M. E. S. CHARLES.

THE dogwoods, or dogwoods and cornels, form a very attractive family group of plants which consists of herbs, shrubs and trees. The trees are small and sometimes play at being shrubs; the shrubs now and then try to be trees; and the herbs are woody at base as if they hope some day to be trees.

Recent botanists have placed the two trees belonging to this group into a family by themselves; but as so many of their characteristics are identical with the other members of the family, I like to think of them, with the others, as composing one harmonious family.

The winter aspect of this group is no less interesting to an observing person than when nature is at her floodtide of growth and beauty.

Beginning with the trees, the largest members of the family, we find there are two species, both small; the one with which we are familiar being rather larger of the two; and one very similar which grows west of the Rocky Mountains. The most noticeable difference between them being that instead of the leaves of the involucre of the western species being notched at the apex, they are more or less pointed, and do not meet at the base, thus leaving the cluster of flower buds naked.

The striking thing about the dogwood tree in winter is the alligator-skin appearance of its gray, checkered bark. This identifies it in any stretch of woodland without further aid to the observer. One notices, too, the grayness and the platformed stratification of its bushy top, from whose larger branches the twigs rise with curious bendings so as to hold their clustering buds into the light. The tree has a picturesque waywardness of habit in the woods; it crouches in the shadows of larger trees and leans out to reach the sunshine that sifts through the forest cover. The twigs are thick set with buds, formed in midsummer, for the flowering dogwood is a thrifty, far-sighted tree. The slim leaf buds are inconspicuous among the squat, four-cornered buds that contain the flowers.

I need not tell any one how beautiful a dogwood tree is when the thick cloud of white or pink-flushed blossoms covers its bare branches to their utmost twig. It is a sight to be remembered to the end of one's days. The beauty of the tree is not in its flowers, but in the

four petal-like scales, or bracts, that surround the greenish bunch of small, tubular flowers. They are the outer envelopes of the little flattened buds. In spring these bud scales do not fall but grow at an amazing rate. Only the very tips of them are too dry to grow. They form the peculiar notch at the apex, and give the bract an artistic, if irregular, twist.

These bracts are merely leaves changed for the special purpose of notifying the little mining bee and other insects of like appetites, that there is nectar in the flower tubes they guard. Leafy in texture, though white and delicately tinted, these bracts develop before the flowers, and last beyond their fading; so we enjoy the dogwood bloom for weeks in spring instead of days, merely. This is the fact that counts after all, and the added one that we may go out again and again and bring home sprays of the flowers, and yet leave the tree in better state than it was before, if only we cut judiciously, where the top is thickest. Dogwood trees suffer from lack of pruning; their flowers are stunted by crowding.

The grace and beauty of the leaves, with their channeled, curving, parallel veins, must strike one in summertime. Before they change color the clustered fruits, standing where the flowers grew, gleam bright against the leafy background. These shining, waxy berries are never lost to view, even when the foliage takes on shades of crimson and scarlet.

The winter coloring of the shrubby cornels or shrub dogwoods, is equally as interesting as that of their larger relatives. They all bear their flowers in flat cymous clusters, one to three inches across. The individual flower is a four-pointed star with four exerted stamens. The only flowering shrubs with which the cornels could be confused are the viburnums, but their flower is a star with five rounded divisions and five stamens. If it is remembered that the cornels are always in fours and the viburnums always in fives, the difficulty is removed.

The fruits of this family come in assorted colors; they range from bright scarlet, dark blue, pale steel blue, bluish white and pure white. In flavor they vary simply in degrees of unpleasantness, all being more or less acid, bitter and aromatic, and the bitter is of a particularly persistent and pervading kind. An extract from the bark is often used as a medicine.

Another family characteristic is the brilliant stems of many of the species. The blue cornel is a tall shrub, that with its profusion of bloom, red-stemmed, blue fruit, and autumnal coloration of its leaves, is a striking form most desirable in any situation.

The rough-leaved cornel is a shrub of wet soils. The bark is thick, fissured and of dark reddish brown. The twigs are slender, light green and hairy at first, soon becoming red-brown. Its fruit is white and in large clusters.

Clumps of the red-osiered cornel burns in the spring woods with stem and bursting leaf buds all of the same deep garnet, and near by are masses of dull purplish-red, where the silky cornel stands, still unprovided with green leaves large enough to hide its stems.

The most marked example of winter coloring among the cornels is the white-fruited dogwood of Siberia, which is the species usually cultivated in our gardens. The blood-red twigs and stems which glow throughout the winter, and deepen and flame as winter merges into spring, are well known, especially in the eastern States.

But an extensive and pleasing range of winter coloring can be had by means of our native dogwoods alone.

The single species of the dogwoods that is classed with herbs is a small plant, but it does its best to attract attention by surrounding its clusters of small flowers with a decorative involucre in imitation of its largest relative—the dogwood tree.

IDEAL TREATMENT OF ANIMALS.

A LARGE part of the energy of civilization has come out of the bodies of the great four-footed races. The horse, the ox, the mule, the elephant, the camel, the reindeer, the water buffalo, the yak, the dog, and the donkey—on the powerful and patient backs of these patient beings civilization has been borne for unknown hundreds of years. The power and nobility of these races have enabled man to carry out enterprises he never could have dreamed of undertaking single handed. Without horses or other beings able and willing to wield the great implements, agriculture, the most basic of human industries, would be almost impossible.

In the ideal state man treats the races of beings affiliated with him not as objects of pillage, but as beings with rights and feelings and capabilities of happiness and misery like himself. He is kind to them and ever mindful of how he may gladden and enrich their necessarily meager lives.

He gets real pleasure by simply seeing them happy and realizing that he has in some measure contributed to that happiness. He provides them plenty to eat, comfortable homes, vacation days in which to rest, opportunities for pleasure and pastime, an education, and infirmaries for times of misfortune and decline.

He does not drive them until they are ready to drop.

He does not abuse them until they are so nervous and soured that they have to be muzzled to keep them from biting at passersby. He does not cut off their pretty tails nor rein up their heads into horrible positions in the interest of an illiterate vanity. He does not go around with a stick or a whip with which to attack them whenever he does not feel well or things go against him at home.

He talks to them. He treats them as the Arab treats his horse. The Arab regards his steed always as his comrade, as one whom he delights to please, taking him into his own tent if necessary, and putting his arms around his neck, and looking into his beautiful eyes, the assurance of true love and fellowship.

In short, man, when he acts ideally, treats these beings at all times as associates, not as slaves or machines; as his best friends and most faithful and valuable allies. They, on the other hand, come to recognize man as their true guide and benefactor.—*Chicago Tribune*.

WAYS OF EMPEROR PENGUIN.

VISITORS to the Auckland Museum now have the opportunity of inspecting an interesting memento of the recent antarctic expedition, presented by Lieutenant Shackleton, in the shape of a specimen of the emperor penguin, the largest and finest and in other respects the most interesting of all known penguins. It was obtained at Cape Royds, at the base of Mount Erebus, and has been kindly forwarded to the museum by Professor David of Sydney, at the express request of Lieutenant Shackleton. Considering the circumstances under which the specimen was obtained and preserved, it is in good condition, and has been excellently mounted by Mr. Griffin. The emperor penguin is absolutely confined to the shores of the ice-covered lands within the antarctic circle, and is remarkable for breeding during the middle of winter, when the sun is below the horizon, and when the temperature often falls to 50 degrees below zero. Only one egg is laid, which is supported in the closely placed broad flat feet, and partly concealed in a kind of pocket in the dense coating of feathers on the lower part of the body, the bird standing bolt upright on the ice-covered ground. If disturbed, the penguin moves away with a succession of hops and jumps, still keeping the egg on its feet. The young bird is fed by the parent until it is old enough to swim, when it is led to the sea, and left to find its food for itself.—*Auckland News*.

In a deep cut near Spokane, Wash., a scientist has found a ginkgo leaf, which he says proves that Japan and America were once united. The ginkgo is distinct among plants, and is now found only in Japan.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE may not undo our misdoings of the past, but we may use them as warnings to keep us out of the way of danger in the future.

THE Sixty-first Congress has been sitting for more than two weeks in its second session and should be well started in its business of law-making. However, the people have learned from past experience not to be too sanguine in their expectations in this direction. Sometimes individuals in the business world become noted because of a lack of attention to the business they profess to follow. And, unfortunately for those whose welfare depends on prompt and wise legislation, the same thing is sometimes true even of august legislative bodies.

AND yet there is little apparent reason why this session of Congress should make itself "noted" in this way. There is so much legislation needed that would clearly benefit the majority of the people concerned and the greater part of the country that a fine opportunity is open for Congress to make the session renowned rather than merely noted. President Taft is helping to broaden the opportunity by recommending a number of important measures for legislation in his regular message and he promises to bring other very important matters to the attention of the legislators later on.

TRUE, wise legislation demands the turning down or blocking of some measures as well as the prompt enactment of others. What is wisely to be turned down or wisely to be placed on the statute books must be determined according as it does not or does work out for the ultimate good of the large body of people whom the lawmaker represents. This is the test for the true lawmaker, and this is the point on which the people today have a quarrel with their legislative bodies. They feel that the men to whom they

have for the time delegated their power have turned things about and are looking after the interests of a favored few who offer attractive and speedy returns for their services. And there is much evidence to support this feeling; it cannot be ignored or passed over lightly. An awakened, intelligent, determined people means circumspect, faithful, earnest lawmakers. The sarcastic flings now indulged in by the people at the expense of legislators prove that the people are awake. It is the lawmakers' turn to move.

THIS week we are publishing a brief biographical sketch of one of the last of the long list of men and women born in 1809 whose lives are stamped indelibly on the pages of history. So much have these men and women had to do with the history of the last century that one cannot imagine what the world, and especially our part of it, would be like if they had never crossed the stage of time. And from this thought we turn to the question, What of the year that is passing? Has it given us possibilities that shall develop into powerful uplifting agents, molding the future into a world after the Father's will? It is for us to see that that which we control is so directed. A hundred years hence the world may look back and marvel over what we now consider a simple, insignificant (?) duty.

RESOLVING ANEW.

NOTWITHSTANDING the witticisms of the funny man and the sarcasms of the critic on the making of resolutions at this season of the year, there is, in fact, little that can be said against the custom and much to be said in its favor. People are so constituted that they like the idea of a change—of new beginnings. Whether it is simply an illusion, as in the case of the new year which after all is only a continuation of time, or a fact, as the beginning of a new book, the pleasure is the same and the happy results also.

We shall say nothing on how these resolutions shall be made or entered upon. We wish simply to encourage a hopeful beginning of the new year which will naturally breed a determination to make the period a witness to marked advancement toward one's ideals. The hope itself is born of the thought that the new year stands out from the years preceding and those following, in a sense independent, and therefore offering inducements for new beginnings and for beginning anew.

The thought of "another chance" has often called into use all of a man's powers and won for him the success he had long strived to gain. He had the power to win all along, but the vision of a clean slate—a new trial—put the spur to his endeavors and landed him at the coveted goal.

And so the new year will find many of us welcom-

ing its beginning with new hopes and increased energy and enthusiasm, resolving with a blare of trumpets or in the secret chambers of our being to surpass all previous accomplishments.

With this spirit ruling, we can with the greatest earnestness give voice to the greeting, A happy New Year!

PUTTING IT TOO STRONG.

If one reads the advertisements of various articles in magazines and circulars, he knows that no one undervalues what he has to sell. If he has a remedy to sell, it is good for nearly every disease to which flesh is heir. If it is a piece of machinery, it is perfect. If it is land that is to be sold, it is a rich soil, no rocks, no swamps, adapted to any crop a man may want to raise. The same holds good if a horse or a cow is to be sold: the animal is strictly all right, and it is only because there is no other way that it is let go.

And this is true of printers, as well as of other people. Each office does the best work in the town, carries most advertisements, has the largest circulation, gets out altogether the best paper. The railroad has the most direct line, the best service, the grandest scenery. The steamer makes the best time, has the most comfortable staterooms, sets the best table, takes most precautions against danger. The college has an ideal location, a faculty that cannot be excelled, takes every care to guard its students from moral and physical sickness, gives more for the money than any other school does; and all this is done just because the management are so interested in young men and women that they must do something for them. There is no selfish purpose, no desire to get gain—philanthropy pure and simple.

Then the way stores advertise! Not long ago we were looking over the advertisements of the dry goods houses in a paper. We were surprised to learn how many there were that carried positively the largest and best and cheapest stock in the city. None of them carried any goods that were not all wool, a yard wide, and the colors warranted not to run in the wash." Each one had the best suits, the best boots and shoes, the best hats and caps and gloves. How many best watches there are—perfect time-keepers. There are several large packing houses which furnish the best beef, ham, bacon, lard. There are numerous best brands of whiskey and beer and wine. No one knows how many tobacco houses furnish the best chewing and smoking tobacco, the best cigars and cigarets, the best snuff.

There is scarcely an article or an occupation which is not excessively praised by those interested in it. This has been done so much and so long that we do not believe what we read about anything, unless we have some other evidence than the advertisement. And

thus it comes about that we fail to believe many things which are of vital concern to us, and which are not advertisements. The habit of exaggerating is a bad one—a shorter word describes it better. Most of it is done with a selfish purpose in view. Whether what is said is true or false, is not a matter of great concern.

We do this of ourselves perhaps more often than we do of what we have for sale; for we are before the people all the day, every day. Defects are carefully hidden by paint or padding. Moral defects are covered by an assumption of the virtues which are just the opposites of the defects to be hidden. We pose as public spirited, when we are utterly selfish; as generous, when we are miserly and covetous; as not seeking office, when we would give almost anything to secure a certain position; as honest, when we are only afraid of the results if we are dishonest.

Isn't it time to stop and consider? Haven't we gone far enough in this business of deception and self-deception? Wouldn't it be better to be really honest and true? Such a change as that would be a revolution; but not all revolutions are to be dreaded; some of them have in the end brought great blessings to mankind, and we believe this one would be most beneficent of all. Of course, we are afraid to try it. We are sure to be laughed at if we start out on such a line; for we shall be alone at first. But isn't it our business to be true in spite of the world, the flesh and the devil? Will not our truth help others to be true? Suppose we try it for the rest of our life, and see.

We have been putting our merits and those of our wares pretty strong for a good while. It hasn't really paid: it will pay a great deal less in the end. It is the time of the year when new leaves are turned over; let us not forget to turn this one over. Let us not overvalue what we have and are. It is a poor policy, and is wrong.

SONG OF THE RYE.

SELECTED BY A. J. SMITH.

"I was made to be eaten,
And not to be drank;
To be thrashed in a barn,
Not soaked in a tank.

"I came as a blessing
When put through a mill;
As a blight and a curse
When run through a still.

"Make me up into loaves,
And your children are fed;
But if into drink,
I'll starve them instead.

"In bread I'm a servant,
The eater shall rule;
In drink I am master,
The drinker a fool."

Ware, Texas.

THE HOME WORLD

YOUNG MAN, GET A HOME

J. G. ROYER

EVERY young man who begins to think and plan for himself, looks forward to a time when he shall have a home he can call his own. He may not have a definite notion as to what that home shall be in style and furnishings, but he has within him a longing for a spot that shall be his. Such longing is a soul impulse implanted by nature, and it should be cherished and encouraged in every laudable way; for every young man who has passed the "majority mark" should aim at having a home of his own as soon as possible. If he is practically wise and frugal he will in due time have one. The sooner a young man makes up his mind that he will have a home of his own, the better it will be for him.

I am sure young men are aware of all this, and many a one feels it keenly; but he does not have the money necessary to set up a home according to present-day social demands. Therefore he cannot marry and have a home. He may form an engagement, but he must put off marriage and be without a home until he has acquired a sufficient amount of money to secure the home. Such is a misconception of the real aim and purpose of life; and it is a lowering and degrading of womanhood. Think of a young man commencing life alone, fighting its battles alone, winning if possible, by years of arduous toil a competence alone, and when the conflict is over, the toil is past, and the victory is won, then he can have a wife and a home. If he fails in getting the money alone, he cannot have a home. What folly; what nonsense, this modern idea of home-making!

Another home-ruinous custom of present-day society is for young people to marry and take up their abode at some boarding house. It is right that they should marry, but they should at once establish a home of their own, even though they cannot own the rooms or house in which they live. It is intended that husband and wife shall constitute a sufficient society for the enjoyment of life. If they are only two members of a large boarding house family in which they have no special control or interest, the exclusive enjoyment of

each other's society is continually disturbed. Besides, those who thus defer establishing their own home any length of time, seldom succeed afterwards in making one to their liking. The reason for this is plain. They have become accustomed to enjoy the comforts of life without trouble on their own part. They have been waited upon and received hospitality without returning it, and afterward when the more sane and natural life is attempted in their own home, they almost invariably find themselves too old to learn.

If possible young people should begin a permanent home in the outset, instead of settling down in one of a temporary character with the intention of building a "grand house" when the "better times" come. The better times are when youth and health and love join hands and set out upon life's journey together. Yes, better build a home now, even though you must begin with only a room or two beside a kitchen. Those who do so will find that the seasons will come and go, bringing their gifts of improvement and comfort; and in twenty years your home will be a far more lovely and enjoyable abode than any "grand new house" can possibly be. Those who have begun in this way and afterward attained to the possession of wealth, always look back to those days of "small things" with peculiar delight and satisfaction. They speak of those days as the "golden age" of their hearts, if not of their purses as well.

I am not here to praise poverty. No one ought to remain poor if he can help it; yet poverty certainly has its compensations. We say the man who has no money is poor; but surely the one who has nothing but money is poorer. Many of the greatest benefactors of the world began with very little money. Many of them were poor. And they who now are afraid to marry because they have but little money and so deny themselves the pleasures of the home, because their house must be small, and their furniture plain, do not deserve to be happy. Let young people begin according to their means, however small, and honestly live within their income,—if possible not quite up to it, by

no means beyond it—and be content with what they have. To be content, but not satisfied with what they have will cause every added comfort to be appreciated, and if wealth be attained later on, it will be enjoyed.

The social sentiments of today may not agree with the home-getting and home-making sentiments here expressed. There are those who say they are proud of not having married until they saw their way clear to a "good living." To all such I take pleasure in saying that there is an infinitely larger company of us who are equally proud that we "fell in love like the birds, and like them mated with as little fear of being able to find our daily crumbs." Did not the good God make us to love and to live? Why then should we be afraid to do either? History shows that if you do not marry when you want to, you will not be likely to do so when you wish to.

Mt. Morris, Ill.

"HOME, SWEET HOME."

LILLIAN M. WIRE.

OH! what is home without the "loving words"? We can manage very well without the "low of cattle and song of birds." And even without the "health and quiet." But unless we have the "loving words," it is not home. It is simply a place in which to eat and sleep and to shelter us from the storm.

When the warmth and friendliness are gone, it is a lonely place. No amount of costly furniture can take the place of *love*. I have entered homes that were rich in upholstered furniture and beautiful pictures but there was a chill. While in a *real* home, though it was poor and tiny, how the atmosphere seemed to cheer one, the moment he steps inside the portals. "Ah!" you say to yourself, "this is home."

I see such a difference in going about. Some women have a knack of making everything look home-like. But remember, it is the "ornament of a meek and quiet spirit" that goes farthest in making home pleasant.

"Mid pleasures and palaces
Tho' we may roam,
Be it ever so humble,
There's no place like home."

Although John Howard Payne was homeless, who has written more tenderly on the subject than he?

Where love reigns in the home, surely

"A charm from the skies,
Seems to hallow us there."

Happy is the one who has such a habitation. But we have the assurance of having "a house not made with hands, eternal in the heavens." And the beauty of our heavenly home will far exceed anything "of earth, earthy." For with the home in heaven, "the Builder

and Maker is God," "and eye hath not seen, neither hath the ear heard the glories that God has prepared" for us.

DREAMS.

Of all the mysteries, sweet and rare,
That the years, as they come and go, unfold,
There is one ever fresh to the young and the old—
One sweeter than ever the others are;
'Tis the happiest thing, in this life of ours—
The dreams that we dream in our waking hours.

Ah, some may be wise, and scornfully say,
"No room for the dreamer on life's stern field;
The sword is for war, and the sceptre to wield,
And work is our motto from day to day."
Let them practice and preach; let them toil and fret,
But women and men will be dreamers yet.

And the dreams? Ah, well, no friend may know
Where the spirit wanders, unfettered and free—
What sunny skies and gardens fair there be
In the mystical land where our fancies go;
We pity the builder, so prosy and plain,
Who builds no beautiful castles in Spain.

'Tis true that the waking may bring but care,
And the fairy structures may tumble and fall
At the sound of war, like Jericho's wall,
Because, forsooth, we've been building in air.
But 'tis better to see one's castles fall
Than never have known a castle at all.

"For women will dream:" Aye, women and men
Will dream and dream, 'till the night comes on;
Dream after life's fever and fret are done;
Nor waken to find their dreams are vain
If, perchance, the best dreams that our hopes can build,
In the "after-while" we shall find fulfilled.

—M. I. Bliss, in Fireside.

KEEPING STEP.

It began when Hilda was in the second grade. The diacritical marks first called Mrs. Hunter's attention to the need of keeping step with her children through school courses. Hilda had already begun to bring her "work" home, and, of course, mamma helped her.

"Oh, it isn't broad a; it's short a, with a breve. Mamma, you don't know," the little maiden cried pettishly.

Mr. Hunter looked up from his paper. "That is not the way for you to speak to mamma, Hilda. She was a teacher for several years, and I think she can help a little girl of eight."

"But there are new ways; Miss Briggs said so. Maidie's mamma helped her with her number work, and Miss Briggs said it was old-fashioned."

Mr. Hunter had gone back to his paper. It was his wife who said:

"It is time to put away the books now. You and Joyce shall have a story before you go to bed."

An hour later Hilda, Joyce and baby Raymond, who had just passed his first birthday, were all sleeping. Mrs. Hunter sat down opposite her husband.

"Harry, if I am not able to help Hilda now, what will be my position when she enters the high school? I have always thought of my teaching with satisfaction, because it would enable me to keep in touch with the children in their school work."

"And now to be told, when Hilda, has not been in school two years, that your methods are old-fashioned!" Mr. Hunter laughed, but there was a serious tone in his voice as he went on. "Think how far behind the babies I must be; I finished the high school when I was eighteen, sixteen years ago."

"What are we to do about it?" Mrs. Hunter asked.

"Why, I don't suppose we can do anything. Just step aside and let our present excellent school system have its way."

Mrs. Hunter said no more. However, she thought much and seriously on the subject.

One May afternoon she sat down in her cozy sitting room to decide a weighty matter. Raymond was sleeping, while Joyce was playing with building blocks.

"Next year I's to go to school and learn things, like Hilda does," the little girl crooned as she laboriously built a tall tower.

"Yes, and that will complicate matters," Mrs. Hunter said to herself. "For the first two years I must do the work of two grades. After that Joyce's work would be only a review, supplemented by the new methods acquired in two years. In five years Raymond will begin—the year before Hilda enters the high school. I—why, I hope that I am not regretting that there are three of the darlings."

She laughed, albeit her lips trembled.

Could she do each year the same work that her children were doing in school? Hilda's next teacher was a warm friend of the Hunters; she would understand, sympathize, help. The mother felt sure that with her own training, textbooks, an educational journal and frequent visits to school she could keep pace with her children, not only through the primary and intermediate grades, but also through the high school.

She was confident of her ability. What about the time that it would take?

Mrs. Hunter did her own work, excepting the washing, house-cleaning, and a part of the sewing. She had decided domestic tastes and loved the care of her children.

"Perhaps I can cut down some minor luxuries, such as hemstitching the ruffles for Joyce's dress and making fancy desserts," she thought. "Still, the work of the house must not be neglected. What other things can I give up?"

From church she or Mr. Hunter had to stay away, on account of Raymond. She had to give up Sabbath school, although she taught her little daughters the lesson.

"I must do that, and, as soon as Raymond is old

enough, we must all go. That is duty. While I cannot attend the meetings of the missionary society with regularity, I want to retain my membership. There is nothing but the Reading Club. Mother has always been glad to keep the children, and I have felt that the work was a stimulus to my thinking powers."

The Reading Club consisted of twenty ladies who met fortnightly. Each year they studied the history of some country, giving a short time each day to reading. Together they reviewed their work, preparing papers on various topics connected with the history.

At last Clara Hunter resolved to give up the club and study the work done in the first and third grades of the school. It was only to Hilda's teacher and to Mr. Hunter that she told her plan. To herself she said:

"When I have proved its worth I will ask other mothers to try it."

That was a busy year for Mrs. Hunter. It was not learning the lessons that took her time; it was familiarizing herself with the ways of doing the work.

In six months' time she found herself mistress of the situation. Her greatest triumph was that she was able to look at things from the view-point of her children.

The mother's interest grew. She found that the new work supplied the mental stimulus that she had before received from the club.

Hilda was in the fifth grade before she fully comprehended just why it was that mamma was always able to understand all about the lessons. In the beginning Mrs. Hunter had promised herself that she would not make the mistake of giving her daughters too much help. She was their fellow student, not their teacher.

When Hilda entered the high school, she said:

"Mamma, we will have such good times together, over the English. Miss Barker says that I remember my back work well, and I think it must be because we all study together, so I review what you and Joyce are doing."

After a trial of eight years Clara Hunter feels that she has succeeded. There have been some sacrifices. Sewing and ironing have been lessened only by doing away with many of the ruffles and frills dear to girlish hearts. However, studying with her daughters has made working with them only natural, and they are much help to her.

Mrs. Hunter has kept step with her children. She believes her plan, possibly with modifications, would be a blessing to other mothers and daughters.—*Hope Daring, in American Motherhood.*

"TAKE flour and water and make a stiff dough instead of batter. Then have a little water in the bowl and wash the dough until all the white part has dissolved. The yellow, gummy part which remains is what makes the clothes yellow. Strain the starch and pour it into boiling water and allow it to come to a boil."

FOR THE HAIR.

As a preventive treatment for dry or faded hair, the scalp massage is to be recommended. It takes time, but it pays in the added luster of the hair. To massage the scalp, rest the tips of the fingers on the scalp, the thumb being firmly placed; the balls of the fingers are then pressed in and the scalp moved, the finger tips remaining where they were placed on the scalp. Unless they are held rigid, they will move the hair, giving no massage. The scalp should have this treatment all over the head, giving three or four minutes to each place, and paying particular attention to the scalp on the temples, as that is where the hair thins and grays first. This movement of the scalp will restore circulation, and give better health to the hair follicles. Oils will not make the hair greasy if properly applied; that is, if the hair is parted and the tonic rubbed in on the bare line with the finger tips or a bit of sponge. This should be done before the massage, and oils or liquids can be applied with a little sewing machine oil can, so that the scalp, and not the hair receives the tonic. One of the best scalp tonics is crude petroleum; vaseline is good; beef marrow is one of the best simple scalp foods, and can be made pure at home. Melt and strain a gill of beef marrow and add a teaspoonful of sweet oil; twenty-five drops of tincture of benzine will help to keep it sweet, but it should be made in small quantities.—*The Commoner*.

**PUMPKIN PIES.**

PEEL, seed and cut a hard yellow field pumpkin into inch pieces; put into a kettle (iron is best) with a very little water and slowly bring to a boil—it should take about half to three-quarters of an hour at least, and by that time there will be juice enough to cook it without scorching. Let cook slowly, stirring often, until all the water is apparently cooked out of it, then let get cold.

A plain pie is made by using, for two pies, one pint of stewed pumpkin, one cupful of sugar, two eggs, one pint of nice milk, a pinch of salt, and a half teaspoonful of ginger.

Old Style—One quart of stewed pumpkin, teaspoonful of ginger, teaspoonful of cinnamon, same of salt and two teaspoonfuls of flour. Mix well with the pumpkin, add one large cup of good molasses, cup of sugar, two pints of milk, and beat well. Bake slowly in deep tins with a single crust.—*Selected*.

"OLD FASHIONED BATTERCAKES.—Heat one pint of milk to near the boiling point, and stir into it one tablespoonful of butter; stir gradually into the scalding milk one pint of sifted cornmeal and one scant teaspoonful of salt; when cool, add two eggs beaten light without separating the white and yolk, and one tablespoonful of sifted flour. Beat the batter until

thoroughly blended and light, and it should be quite thin. Have the griddle very hot, but not so hot as to burn the batter, and it must be well greased with lard. Pour the batter on the griddle by generous spoonfuls, and turn the cakes as soon as the under side is browned. They should be thin, and quite brown when done, and should be eaten with pork gravy or butter."

Camphor as a Deodorizer.—Camphor is most useful as a deodorizer for the sick-room. Place a lump of it in an old saucer, and when required apply to it the tip of a red-hot poker. The fumes which arise will impart to the room a pleasing freshness.

The Children's Corner

PAVE YOUR WAY TO INDEPENDENCE.

"COME, Charlie, I want you to drive a few nails in the shed for me," said Nettie to her brother the other day.

Charlie was splitting wood at the time, and her father, overhearing the request of his daughter, said:

"Why not drive them yourself?"

"Because I can't," she replied.

"Because you can't!" he responded. "Why, McCarty says there's no such word in the book. Come here, and I'll show you how to drive the nails."

With hammer in one hand and nails in the other he went into the shed, drove a few into the door, and then gave the remainder to Nettie. She found it an easy thing to drive the nails, and felt quite proud of her achievement in the mechanical art. She having completed the work, her father said:

"Now, my girl, that lesson makes you independent. Some of these days I'll teach you how to drive a horse, sharpen a knife, and whittle, too, without cutting your fingers. Don't you let the doors creak on their hinges for want of an oiled feather; or the little children's shoes, or your own shoes, get hard in the winter time for want of a little grease.

"And as for you, my boys," said his father, turning to Charlie and his little seven-year-old brother, "you ought to learn how to make a bed, sweep a room, or sew on a button. A little cooking will not hurt you. Many a beefsteak and fresh fish have I cooked in my day, and my mother told me when I was a boy I could beat any boy making a pot of coffee. There is no telling what your lot may be, or where you will be cast, some time during life. The most helpless people I have met were those who could do only one kind of work. All you boys and girls should learn some one thing very well, and make that your dependence for a living, but add to it as much skill as you can; for it costs nothing to carry knowledge, and it enables you to pave your way to independence."—*Selected*.

THE QUIET HOUR

TELL YOUR TROUBLES TO THE LORD.

IRA P. DEAN.

Let me tell the troubled sister who is filled with grief
and woe,

Who is seeking peace and comfort, but she don't know
where to go,

When you've sung sweet hymns and read good books
and they no peace afford,

Never bother with your neighbors,

Tell your troubles to the Lord.

When you've just hung out the wash and it begins to rain.

And everything you try to do just seems to be in vain,
Do not sit around and worry, though you've lost the
golden cord,

Never bother with your neighbors,

Tell your troubles to the Lord.

When evil seems to be with you, and stay the whole day
through,

And when your husband comes from work and tells
his griefs to you;

'Tis just the devil trying to tempt you with his fiendish
horde.

Never bother with your neighbors,

Tell your troubles to the Lord.

When a tender tie is broken and there is a vacant spot,

And all the greatest troubles really seem to be your lot,
Remember how the widow's son our Savior once restored,

Never bother with your neighbors,

Tell your troubles to the Lord.

MIRACLES, PAST AND PRESENT.

IRA E. LONG.

God through his prophet Isaiah speaking to men says, "For as the heavens are higher than the earth so are my ways higher than your ways and my thoughts higher than your thoughts." The truth of this statement is strikingly attested by the miracles wrought by God in all the dispensations of his dealings with men.

Generally speaking, we may divide the history of time into three epochs or dispensations. The first covered the time from the creation to the birth of Christ. During this time God dealt direct with men through individuals chosen by him for the express purpose of revealing his will.

The second dispensation was ushered in by the birth of Christ and continues indeed until the end of time but was most active during the sojourn of Christ here on earth.

The last began upon the day of Pentecost and under the direction of the Holy Ghost will continue until God comes to reign personally and universally over his kingdom.

In each of these dispensations miracles were wrought but we notice a marked difference in their nature. In Old Testament times miracles were mostly performed upon matter merely. Water came from the rock, manna fell from heaven, cities fell down, men were saved from furnace of fire, etc.

In the second dispensation the miracles were largely of the same nature and consist for the most part of the suspension or temporary changing of the laws of nature. But coming to the last dispensation we find this difference that miracles were performed upon the souls of men rather than upon material substance.

The first miracles then were only a sign of something greater to come. They were temporary in nature. The blind eye saw and the dumb tongue spake but afterward nature asserted itself and the eye that saw was closed in death and the tongue that spake was hushed by the same agency. The dead were raised to life but finally nature prevailed and the person was forced to go the way of all the earth.

In 1 Cor. Chap. 6, Paul gives us an example of the kind of miracles being wrought by the Holy Ghost. He says, "Neither fornicators nor idolaters . . . nor thieves nor covetous nor drunkards . . . shall inherit the kingdom of God," and continuing says, "and such were some of you but ye are washed, but ye are sanctified, but ye are justified in the name of the Lord Jesus and by the Spirit of our God."

This is the nature of miracles wrought by the Holy Ghost. Men who were adulterers, thieves, drunkards, etc., are cleansed, sanctified, justified. Miracles performed upon the souls of men. These are enduring. Upon these nature has no effect. They last not only in time but stretch away into eternity.

The day of miracles then is not past. These miracles are being performed now. These miracles we should expect through faith in God and the power of the Holy Spirit to accompany our praying and preaching now. The Lord grant that it may be so.

"THE great test of what a man is at heart is what he does with Jesus Christ."

LIFE.

ZACH. NEHER.

THE means of life is death, or giving up. Years ago the cradle and hand sickle were the only means of harvesting grain here. Why are they not so recognized now? Has the means of life changed? No, only the means of harvesting grain. We have something better. All life is continually throwing off the old and taking on new. If we progress we must cast aside the old and take up with the new. It is possible by our strenuousness we may cast aside the old too soon, or stick to the old too long. Then is our progress hindered, but it must go to keep alive. That is fundamental. All vegetation must die to live again, in other forms.

This is true in the Christian life, business world, and fashion of society. No person can possibly live in the fashion of society without casting aside the old and putting on the new. His own will or notion does not figure in the matter. Even his purse does not change the principle of living. He *must* do it or *die*,—step down and out. The same is true in Christian living. Our own notions or views do not count in this (giving up) law of life.

The throwing off of the old and taking on the new is not done by exertion or effort. It is the life within pushing out. Our part is to yield, give up, and *live*.

It is hard, very hard to give up something that possibly was at one time very useful and a good means to maintain life. But it is no more useful as a means; therefore should be cast aside.

Many people worship the form and lose sight of the ideal which is the real cause of much spiritual sickness and death. Life is all in all; death the means to gain it all.

Reeds, Mo.

FACTS ABOUT MISSION WORK.

A RETURNED missionary to India, H. M. Scudder, drew up a statement of the principal facts relative to mission work, as they have been verified in his experience of many years. What he has to say is so impressive and suggestive that we here reproduce it for permanent reference.

1. The heathen are conscious of sin. Their religious works contain affecting confessions of sin and yearnings for deliverance.

2. The heathen feel the need of some satisfaction to be made for their sins. They have devised many penances, asceticisms, and self-tortures. These fail to break the bondage. They do not give the conscience peace.

3. The heathen need a divine Deliverer, one who can make the satisfaction and inspire the peace.

4. There is a command in the New Testament to

go and disciple all the heathen nations in the name of this Deliverer.

5. This command emanates from the Supreme Authority. It is from the lips of Christ himself.

6. This command is addressed to all Christians in every age, until every human being is converted. He who said, "Go preach to every creature," added: "Lo, I am with you alway, even unto the end of the world." The command and promise reach unto the end.

7. The missionary spirit is the spirit of Christ. The soul or the church that does not possess it is dead.

8. If we love the person of Christ, we shall desire that his glory shall fill all lands.

9. If we love the truth of Christ, we shall be intent upon its proclamation till every false religion is vanquished by it.

10. We are not Jews, but Gentiles. Our lineage is heathen. The missionary enterprise rescued us from paganism. Gratitude for our own emancipation and love for our brethren, the heathen of all countries, should move us with a mighty impulse to engage in the missionary work.

11. We ourselves are the offspring of the missionary enterprise. To turn against it is like a man's turning against his own mother.—*The Missionary Outlook*.

WHAT IT COSTS.

MEN forget that, if they would reign with Christ, they must also suffer with him. They have not understood that whosoever would be a disciple must take up his own cross. True refinement implies the fire of the smelting furnace as the purified result which issues therefrom. Character, like conquest, presupposes conflict, none the less, that it has come by the way of faith. Men easily forget that Egypt and the wilderness came before the promised land. They need always to be reminded that thorns composed the Messiah's first crown, and that the sign of God's choice, in men's sight, is as likely to be pains and perils as it is any earthly pleasures. Christians must bear about in their bodies the marks of the Lord Jesus, as evidence that they belong to the elect race, the royal family of God. Refinement must in some sense have been an experience before it can become a possession. Faith implies active fellowship with a living Redeemer, and not merely passive assent to a work performed. The culture that comes from God is a gift which is costly to the receiver as well as the giver. No man can surely have faith in Christ and him crucified who does not in his refinement show signs of the cross.—*Selected*.

"SOME men gaggingly strain at a gnat of error in the life of another, but they swallow with ease a whole camel of inconsistencies in their own lives and give no evidence of digestive disturbance after it is down."

ECHOES FROM EVERYWHERE

Five miles of the Panama Canal have been opened to navigation. This includes the channel from the point in the Bay of Panama, where the water is forty-five feet deep at mean tide, to the wharves at Balboa. Steamships are using this part of the canal daily.

Central Illinois trappers say the fur harvest this year will exceed that of former years and will aggregate \$1,000,000. Some of the trappers earn from \$10 to \$20 a night. Kane county alone is expected to ship \$20,000 worth of raw fur, mainly muskrats.

The Italian Parliament will soon be called upon to provide for a special department to unroll and decipher papyri discovered at Herculaneum. It is trusted that this action may be taken immediately. Some previous documents have been damaged irrevocably because of legislative delay and neglect.

The French chamber of deputies has adopted an amendment to the tariff bill that materially increases the duty on American agricultural machinery. French manufacturers claim that the proposed increase is so great that it is likely to cause foreign manufacturers to establish plants in that country.

Hazing in all its forms has been permanently abolished at the University of Wisconsin by the final step taken by the freshmen class in a recent meeting, in which the first year students unanimously ratified the resolutions of the student conference committee ruling against all forms of hazing. All of the student organizations have ratified the resolutions.

Recognizing that those representatives of modern hygiene who advocate fresh air and plenty of it should be deferred to as well as those who delight to smoke the weed, the Erie railroad has decided to put on a fresh-air car with every train. It will have open windows and ventilators, so that not even the most addicted fresh-air fiend can complain.

A resolution calling for the appointment of a commission of seven persons to inquire into the advisability of holding a negro exposition in 1913, the semi-centennial of the emancipation proclamation, was introduced in the National House by Representative Rodenberg of East St. Louis. The resolution calls for an expenditure of \$5,000, but provides that the commissioners shall serve without pay.

Some years ago when the life insurance scandals shocked the world and investigation began, the fire insurance companies were found not to be tainted. Now, however, a big scandal comes out for the Phoenix Insurance Co. of Brooklyn, one of the oldest in the country, showing that on account of irregularities and overdrawings on the part of the president of the company the surplus is impaired by at least \$1,000,000.

An international conference is proposed for the preservation of the fur seal and all marine mammals, including whales, walruses, sea lions, and sea elephants. Some of these animals are now all but extinct, and the government considers it time to formulate an international law for their preservation. The Japanese seem to be the chief offenders, for they have even ventured within the three-mile limit to carry on their work of destruction.

In Halmstad, Sweden, a manufacturer has started a spinning mill for making yarn out of paper. Such mills already exist in Germany and France. So far the manufacture of rugs and carpets seems to be the best practical use of this new paper yarn. It is said that people in Sweden, especially in the province of Ostergotland, are already making carpets with paper weft. Narrow rolls of paper tape are used, but this of course is not spun.

King Leopold of Belgium, after an illness of two weeks, died Dec. 17. Prince Albert, a nephew of the king, has succeeded to the Belgian crown. King Leopold is survived by three daughters, and since the king's death his marriage to Baroness Vaughan in 1908 has been made public and she is therefore left his widow. Because of this fact, she will doubtless come in for a large share of Leopold's ill-gotten riches and his daughters are already preparing to contest her claims.

Representatives of J. P. Morgan & Co. of New York emphatically deny that either the first or the second purchase of independent telephone systems in Indiana and Ohio, recently made by Morgan interests, was in behalf of the Bell people. The companies, it is declared, will continue to be operated independently. The first purchase was of two companies, and the second was of six. The eight comprise all of the important independent systems of Ohio and Indiana. Morgan is said to have paid \$10,000,000 to complete the second deal.

The annual report of the United States life saving service shows that during the fiscal year there were 1,376 marine disasters involving the lives of 8,900 persons that called the life saving service into activity. Seventy-two vessels were totally lost, although only thirty people gave up their lives in consequence. The total value of the property involved in the disasters was \$16,106,000, the value of property lost being \$2,295,380. Of the 1,376 vessels meeting disaster the life saving service rendered aid to 1,319 valued with their cargoes at \$13,316,815.

William Loeb Jr., collector of the port of New York, has approved the claim to moiety by Richard Parr, the deputy collector and original informer in the sugar frauds, on the \$2,135,486 paid into the United States treasury by the American Sugar Refining Company as restitution for duties evaded by underweighing. According to the statutes regulating such awards, Parr will receive "not exceed-

ing in amount one-half of the net proceeds," which will mean in this case, if the claim is approved by the Treasury Department, approximately \$1,000,000. There is some confiction of statutes concerning payments of this character, but it is said that in any event Parr will receive 30 per cent of the amount named, or approximately \$700,000.

Herr Wannowski is at present the great German popular hero; he is the Berlin detective who has ferreted out the grafts at the Kiel shipyards by which the government has lost millions of dollars. He is an improvement even on Sherlock Holmes, as he uses not only the classic devices of the regular detective police but brings to his aid also the keenest deductive logic. He has run to ground a number of crimes which had baffled the regular police of Alexanderplatz, the Berlin "Scotland Yard," and has been decorated by the emperor for his wonderful work.

Governor General Zyn returned from St. Petersburg recently armed with a warrant from the czar to revive immediately the most oppressive Finnish regulations, which amount to the enslavement of Finland. One of the regulations is for a new system of taxation in Finland by which it will have to pay \$8,000,000 for Russia's national defense, instead of \$4,000,000 as heretofore, and will also have to pay the expenses of Russia's policing of Finland itself. At the first sign of resistance to Zyn's orders the constitution will be suspended and the governor general will become the absolute dictator.

It begins to look as if the snubbing of trusts would become popular among departmental heads in Washington. The Secretary of War recently issued an order forbidding the purchase of oil from the Standard company and now it is announced that the Secretary of the Navy has begun an investigation to ascertain whether or not such an order can be put into effect in his department. The use of oil is becoming more general in the navy and it is essential that a uniform quality be secured. A large corporation that has branches in all parts of the world is of course better able to serve the government than a smaller independent concern.

At the meeting of the Illinois Grange at Rockford Dec. 16 unalterable opposition to any ship subsidy legislation was expressed. The State grange went on record as favoring postal savings banks, but opposed any postal savings act prepared for the benefit of Wall Street and the banking interests. Resolutions favoring a country-wide parcel post, election of United States senators by direct vote and asking for a law requiring that all moneys collected for automobile licenses be turned over to the State highway commission, to be used in building permanent highways, were adopted. Springfield was selected as the place of meeting next year.

All miners should obtain a copy of a publication just issued by the United States geological survey. In it will be found instructions which, if followed, will save many lives. It is a primer on explosives and represents the results of the investigations which the survey has been conducting in the laboratory at Pittsburg. Vigorous objection is made to the use of black powder in any mine where there is danger of a gas or coal-dust explosion. Investigations have proved that the flame from the explosion of black powder lasts from 2,500 to 3,500 times as long as the flame from the newer explosives and therefore is more likely to ignite gas or dust in mines.

A GOLDEN OPPORTUNITY TO GET IN ON THE GROUND FLOOR

in a land of sunshine, and pure air with unlimited possibilities.

☐ Would you like to own a farm that would produce from 60 to 110 bushels of oats to the acre?

☐ Nearly enough to pay for your land in one year.

☐ Possibly you would prefer to raise from 30 to 60 bushels of wheat to the acre. ☐ You can take your choice. ☐ Or you can raise Alfalfa, Sugar Beets, Potatoes or do a general diversified farming business. ☐ You certainly would like an apple orchard that will bring you in an income of from \$200 to \$1,000 net per acre per year. ☐ These are conservative figures and can be sustained.

☐ You need not worry about dry weather. ☐ Lots of water ready and you turn it on when your crop needs it ☐ No uncertainties about it. ☐ One thousand dollars already subscribed for a Brethren Church. ☐ A large number have arranged to locate on these lands in the spring.

☐ This golden egg is being hatched in Sweet Grass County, Montana.

For full particulars and descriptive matter write to

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful

reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

Price, prepaid,50 Cents

NEFF'S CORNER

Survey has now been completed of a fourth railroad into Clovis. Engineers report finding a better grade than they expected, so grading will probably soon begin. This road will connect us with the Dawson coal fields to the northwest. Construction work—grading, laying steel, building depots, etc.—is being rapidly pushed on the road coming in from Galveston. Rumor has it that the contract has been let for enlarging the Clovis roundhouse and shops and our business men think we will have a population of 10,000 in two years. I have a few lots there I will sell now at half what they will probably bring in a year from now. I suppose you wonder why I don't hold my property there if prospects are so good. Well, I have done well by selling at small margins, buying again and so turning my money often, and as I am now contemplating some investments elsewhere, I am offering you the handsome profit I think I would make by holding the property another year.

Address me

JAMES M. NEFF,

Apartado 65, Culiacan, Sin., Mexico.

The "Little Treasury" Series

In this original and beautiful series, each number is a veritable "Little Treasury" of noble thoughts. A scripture quotation strikes the keynote for each page, and is commented upon and followed up by words of noble import, selected with care as to their bearing on the topic. The illustrations enhance the significance of the thought and make more attractive a work of rare beauty.

Per copy,\$0.25

Set of six,\$1.40

The titles indicate the subject matter of the respective booklets:

My Hope Is in Thee.
O Love Divine.
As Thy Days So Shall Thy Strength Be.
Tidings of Great Joy.
Oh, Rest in the Lord.
Stand Fast in the Faith.

Gist of the Lesson, The

By R. A. Torrey

For the busy teacher. To be carried in one's pocket. Spare moments to be improved, on trains, at home, when calling, between business engagements, anywhere, everywhere.

Great in its smallness and compactness. As Marion Lawrance says, "Boiled down and pressed, skimmed, strained, yet full, generous, helpful."

"To those who have possessed and will need no commendation. It is not used former issues that for this year only handy in form, but wondrously complete in what is necessary to the understanding of the lesson and its spiritual teachings."

Price,25 cents

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.
"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.
"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

The Lure of the Labrador Wild

By Dillon Wallace.

The Story of the Exploring Expedition conducted by Leonidas Hubbard, Jr. Illustrations and Maps. 8vo. Cloth.

"He has produced one of the most graphic and moving stories of adventure that we have ever read. The story tells itself, and is as dramatic and devout as it is pathetic. Here is a record that holds one, as fiction never would, of suffering faced and heroism shown, for an ideal that failed, by men who did not fail each other."—N. Y. Evening Sun.

CALIFORNIA HOMES

Many persons are now looking for homes where they are free from the chilly blasts of long, cold winters. California appeals to such, and why not? It is an old tried state which has passed through the experimental stages, having a fine climate, good soil, producing a greater variety of crops than any other state.

Because of the many advantages offered, we are locating our

COLONY NUMBER ONE.

in the famous San Joaquin valley, in "Sunny Stanislaus" county, at the new town of Empire, on the Santa Fe Railroad, near the center of the state, 30 miles south of Stockton and 75 from Sacramento.

This section has a mild climate, free from snows and thunder storms. The mercury seldom falls below the freezing point in winter, and the summers, except a few days, are pleasant and salubrious.

The rich soil and fine irrigation system enable a great variety of crops to be grown, which can be readily shipped to the nearby markets at low cost.

This picture shows a 20 acre Alfalfa field, seeded March 1, 1909.

"The Alfalfa shown above was cut five times this season, as follows, May 20, yield 8 tons, July 1, 21 tons, August 15, 36 tons, Sept. 24, 35 tons and expect to cut it again Nov. 1, making five cuttings, with a total of about 130 tons, or six and a half tons per acre the first season.

"I now have 260 acres in alfalfa, all that was one year old and over from seeding, made an average of 9 tons per acre last year, in five cuttings. Some of the best acres produced from 10 to 12 tons each, the hay was sold for \$11.00 per ton at local market.

"In 1903 this county ranked 16th, in dairy products, now it stands first, because of our good irrigation system and the fine growth of alfalfa.
J. M. Bomberger, Modesto, Cal."

"I have seven acres in orchard and vineyard, which I planted in corn, between the trees and vines, which made 60 bushels per acre. I also have 20 acres on which I made over 68 tons of Oat hay in June, which sold for \$15.00 per ton. I then planted the same ground to blackeyed peas which yielded one ton per acre, for which I have been offered \$61.00.
C. A. Gilstrap, Ceres, Cal."

An organized Church of the Brethren of about 30 members, is holding regular services and Sunday school in this colony at Empire.

"Church Extension by Colonization" is our motto. Write us for fuller information about the Colony lands, prices, rates for homeseekers.
